"I still think the Crossroads is a great institution. It is the only institution of its kind with which I keep in contact. I should like to be with you, and I wish you luck going into the future."

Kao Ki-ming, architect and city planner,

Taipei, Taiwan, writes:

"You are certainly giving a valuable contribution to the cause of world peace. we know that world peace cannot be achieved by war, but only by mutual understanding among peoples. It is a tragedy of our time that the world is divided into two camps, certain nations into two sectors, and certain facilities into two parts. The Chinese people, as the American people, is a peaceloving people. During this 50 centuries of history, the Chinese people has always fought for the peace and against tyranny. We hate the despotism and the war. at present, the United States is obviously the the Western World, China has leader of always been in the past and will be in the future the leader of the East. Though the Chinese nation is now unfortunately divided into two sectors, but history has proved that the division of China has always been temporary. No doubt China will be unified and it will again assume the leadership in Asia in the near future. I'm convinced that the world peace can never be achieved without the hearty cooperation of our two great peoples. So the mutual understanding and friendship between our two nations is primordial for the world peace. As a humble Chinese citizen and friend of the United States, it is my earnest desire to follow you. Dear Mr. Brindle, in the dedication of promoting friendship and mutual understanding among nations for the ultimate cause of world peace."

Gunnar Jansson, National Staff Swedish

YMCA, Stockholm, writes:

"I must say that one of the great experiences during my visit to the United States, 4 months in 1957, was to take part in your Crossroad Sunday Morning Meeting. What I most appreciated was the fine spirit of real love and friendship that met all of us who were there for the first time. We felt like old brothers coming back from a long journey and you embraced us all to your warm

"I have just played the tape recording of your Easter session which you sent for our International Affairs Conference on May 14. 15. By means of the tape you put us directly into your midst and we feel the oneness across all borders that unite us in the International YMCA which has the fine motto: "That they all may be one."

Salute to Schell City

EXTENSION OF REMARKS

HON. WILLIAM J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. RANDALL. Mr. Speaker, I have asked unanimous consent to make this insertion in the Appendix of the RECORD, because I honestly believe I have an opportunity to say just a few words about a small community in the Fourth Missouri District which is unique so far as its determination to set about solving its own problems and refusing to yield to the temptation to give up the struggle.

Schell City is a community of 450 people in northern Vernon County on the south side of the Osage River. It has recently been the object of a long feature story in the Sunday edition of the Springfield (Mo.) News and Leader. Springfield is the nearest metropolitan center to Schell City. Earlier the Daily Mail of Nevada, Mo., the county seat of Vernon County, had published a lengthy feature story similar to that in the Springfield paper.

Noteworthy are some of the descriptions by the Springfield News and Leader which heads its editorial "The Schell City Story: A Village Wakes Up." In the language of Mayor Warren O. Haddix:

We woke up to the fact the town was dying and we decided we weren't going to let that happen.

I said previously that what is happening to Schell City may be unique, and I meant that about a year ago on the Senate side of the Congress, Senator KARL MUNDT, of South Dakota, offered a bill which would create a commission to study the problems of small towns. After adjournment, the residents of this community invited their Congressman to appear before a meeting of the Schell City Lions Club and were interested in a cosponsorship by their Congressman of a similar bill on the House side. No such bill was ever prepared and introduced and the clear implication is that the people of this community decided they would not wait for any further studies, but would set about to rejuvenate their own town by their own efforts through cooperation and mutual help without the necessity of any outside assistance.

The first step was the formation of the Schell City Industrial Development Committee. They made a few simple Industrial Development surveys and found there was an ample labor supply and set out to locate a garment factory. The committee found that the pump in the middle of Main Street was not an adequate source of

water, and proceeded to install a fine, modern water system. Dial telephones became a reality and was another item of progress together with the purchase of new fire equipment. There has just been completed a new brick post office building, with a concrete parking lot, to be dedicated on May 29. It is the privilege and pleasure of their Congressman to participate in the dedication ceremonies. A newspaper office has just been opened, and in April the first edition of the Schell City Ledger to be printed in the town in 12 years came off the press. Then this progressive community discovered it did not have a doctor, once having had five doctors but the last one had passed on more than 5 years ago. The committee approached the Sears-Roebuck Foundation who helps find physicians for rural areas and the business people of this "Never say die" town proceeded to form a corporation and sold shares at \$25 each in the amount of \$35,000 to obtain a medical center. The center will be ready for occupancy in 8 weeks. The American Academy of General Practice in its March convention in Philadelphia pronounced this medical center as the most dramatic and artistic recently undertaken in the United States.

The Schell City Lions Club has been very active in this community rejuvenation, and in the midst of this program, was organized and chartered. One of the first moves of this club was to lead a cleanup, paintup campaign and suggested that some of the old fashioned wooden store awnings that dated the buildings be removed. Then quickly came the countersuggestion that these should not be removed as it might spoil the unique architectural features. The club and the citizens promptly decided to accent these old awnings by repairing and building more, and also to continue such signs as General Store painted flat above the awnings in the old time way. Thus, the new look for Schell City will be that of an antique nature, interesting enough to attract comment and lure visitors.

The Lions Club members look forward to the time that there may be an interesting museum in town. The M.K. & T. Rallroad Station may someday serve as such a museum, as mainline passenger trains between St. Louis and Galveston do not presently schedule a stop at Schell City.

Why so much publicity about this movement? Because, I repeat again, it is unique when a small community is determined to improve its town with no help but its own. The industrial development committee expects to maintain this publicity to attract visitors to its historic sites, but will continue to look for industry which it confidently expects to attract. After the new doctor, there will have to be a prescription shop. There seems to be no end to their plans and promotions.

Both Mayor Haddix and Adrian Lasley, president of the Lions Club, say that the nearby city of Nevada is becoming worried for fear these progressive citizens will try to move the county seat to Schell City.

Citizens of Schell City, your Congressman and all those who have been interested observers in your most progressive program of self-help, repeat "We salute you, Schell City."

Defense Secretary Receives Merited Praise From Senator

EXTENSION OF REMARKS

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. UTT. Mr. Speaker, ever since Thomas S. Gates, Jr., was appointed Secretary of Defense there has been a noticeable and justifiable sense of confidence in the manner in which the responsibilities of that high office are being exercised. The quiet, businesslike, and thoroughly knowledgeable manner in which Secretary Gates directs the incredibly vast and unsurpassably important activities of the Department of Defense has resulted in complimentary observations by the public, the press, and Members of Congress. Significantly, the complimentary comment has not been limited to members of one political party.

A highly noteworthy observation on the manner in which Secretary Gates is performing his duties was made recently by the distinguished Senator and majority whip from Montana, the Honorable MIKE MANFIELD, in remarks on the floor of the Senate. The constructive nature of Senator Manfield's comment was the subject of a lead editorial in the San Diego Evening Tribune of May 16, 1960. This editorial, in pointing out the authoritative remarks of Senator Mans-FIELD, and the commendable actions of Secretary Gates which prompted those remarks by the Senator, underlines the fact that the present Secretary of Defense, Thomas S. Gates, is directing the Pentagon with a degree of knowledge and firmness that warrants the admiration of all those who seek a strong national security. Also, as the editorial further indicates, the observations by Senator Mansfield demonstrate a welcome and constructive fairmindedness in defense matters.

In view of the importance of this editorial, I recommend that it be carefully read by all those interested in national security:

DEFENSE SECRETARY RECEIVES MERITED PRAISE
FROM SENATOR

As a general rule, a Democrat doesn't go out of his way to praise a high official in the Republican administration.

It's happened before, of course, but the occasion is sufficiently rare for notice and comment. The principals in a recent gesture of this sort are Senator MINE MANSFIELD, Democrat, of Montana, and Defense Secretary Thomas S. Gates, Jr., Republican.

MANSTELD inserted in the CONGRESSIONAL RECORD an article from the Wall Street Journal, entitled "Managing the Pentagon." Written by Louis Kraar, it primarily is devoted to analyzing the work and methods of the Defense Secretary.

Reprints of articles are placed in the Congressional Record as "extension of remarks" by Congressmen. Consequently it is obvious that the Montana Democrat concurs with the favorable estimate of Gates made by the newspaper.

made by the newspaper.

Mansfeld said: "The article points out that, although it is late in the history of this administration, the most costly and most complex department of the Government is now beginning to function more effectively. Mr. Kraar attributes the improvements to the knowledge, hard work, and innovations of Gates.

"He notes particularly that the civilian secretary sits in with the Joint Chiefs of Staff and personally helps work out interservice problems, rather than permit them to fester in unreconciled differences."

The admiration of Gates' handling of the tough Pentagon job is shared with Mans-FIELD by others in Congress who initially looked upon his role primarily as that of caretaker.

But the performance of Gates was no surprise to those who had watched closely his sure and knowledgeable handling of previous assignments as Under Secretary of the Navy, and then Secretary before stepping up to the Pentagon post.

Gates is well known and respected in San Diego.

The Defense Secretary has won the praise of the Democrats under particularly trying circumstances, and this makes it all the more notable.

America's arms policy was high on the list of the Democrats' election-year issues. But, Kraar reported, Gates' "detailed grasp of arms questions has gone far in blunting attacks on the President's defense program by Democrats in Congress."

His innovation of sitting in with the Joint Chiefs should strengthen the functioning of this essential body.

The essence of the Joint Chiefs concept as opposed to the allen and dictatorial single command—is that it encourages the free give and take of expert views of the highest ranks in the various services.

Naturally, differences arise. If they didn't, one might easily suspect that we already have, in effect, the same deadly single-mindedness that has been the downfall of autocratic systems.

In the past, these differing views were passed along to the absent civilian secretary of defense in sheafs of lengthy "position papers."

Now, with Gates sitting in, he can hear the arguments firsthand and help to clear up the problems quickly.

America is fortunate in having a man of Gates' caliber in the position he occupies, and it is gratifying that this fact is appreciated by leaders of both parties.

Summit Post Mortem

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF TLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 3, 1960

Mr. DERWINSKI. Mr. Speaker, grassroots public opinion, reflecting as it does the true sentiments of Americans in relation to the recent Soviet-torpedoed summit conference, is clearly shown in community newspapers throughout the country. I submit for the record an editorial from the Chicago Daily Calumet

of May 20, which, I believe, is worthy of attention:

SUMMIT POST MORTEM

With the summit conference, or the lack of a summit conference now history, some salient facts are emerging that are both alarming and reassuring.

In the first place, there can be no doubt that international tension is as keen today as it was before the conference. But then no one in his right mind expected it to be any different anyway.

different anyway.

The Russians cannot afford to lessen tension. They have too much invested in tension to give it up so easily.

On the other side, we have the fact that Khrushchev realizes that he can no longer strut like a peacock upon the stage of world opinion without being recognized for the jackass he is. The reaction of the free world to his scuttling of the summit conference should restore our faith in the intelligence of our allies. They diagnosed him for exactly what he is—a hatchet man.

If nothing else, the summit conference may have unified the western world behind the knowledge that we are indeed dealing with international screwballs in the cold war with the Russians. We must be prepared for anything, for sconer or later they will throw anything at us.

Despite his almost comic performance, Khrushchev must be regarded with the same respect one would accord a mad dog loose in a children's playground.

Waterway User Charge Bill

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. VAN ZANDT. Mr. Speaker, on Wednesday, May 25, I introduced H.R. 12395, a bill to establish the Inland Navigation Commission and to authorize the provision and collection of fare and reasonable charges for use of inland waterway navigational improvements, constructed, maintained, or operated with Federal funds, and for other purposes.

Representing as I do, from the standpoint of population, the largest railroad population in the United States H.R. 12395 was introduced to eliminate an inequitable situation that discriminates against the Nation's railroads, and users of the highway system of the Nation.

If H.R. 12395 is enacted into law inland waterway users would pay a user's charge to the Federal Government and thus remedy the existing evil of unfair competition that exists in our present nationwide transportation system.

From the earliest days of the United States, Congress has expended public funds for the improvement of navigation on inland waterways. In the early period of our history these expenditures were relatively small.

These expenditures have greatly increased over the years, however, and as they have increased the justification for them has become increasingly weaker. The country is now fully settled and en-

joys an efficient and mature transportation system. Government spending for all purposes is at a very high level. So are taxes. Use of tax revenues to improve inland navigation, once a public benefit, has become a public burden. General tax revenues that should be spent for general public purposes, or conserved to permit tax reduction, are being spent instead to provide special benefits to identifiable classes of our citizens who could easily pay the cost of those benefits wherever they derive from economically sound projects. And, of course, in situations where this would not be the case the improvements should not be made. The time has come to put the Nation's inland waterways on a sound economic basis by imposing compensatory user charges to be paid by those who directly benefit from these expenditures and thus to remove an unjustifiable burden from the taxpayers and the Treasury.

There is almost no dispute as to the correctness of the user charge principle. Presidents Franklin D. Roosevelt, Harry Truman and Dwight D. Eisenhower have all publicly urged the imposition of such charges for the use of publicly provided transportation facilities. Virtually all economists who have considered the question have advocated such charges; and the Transportation Association of America, through its carrier, shipper, user and investor panels-excepting only the waterway panel-has endorsed the principle. Agreement in principle, however, is of no avail without a means of putting the principle into effect. This bill is such a means of effectuating this principle as respects inland waterways. It does not extend to other types of transportation facilities furnished at public expense because it seems probable that adequate charges for use of those facilities will ultimately be collected by other means. Commercial users of the highways furnished at the expense of the United States do not now contribute in just proportion to their use, but the Federal Highway Act of 1956 provides the necessary machinery for adjusting highway user charges to that end. And officials of the airline industry have expressed their willingness to pay user charges through other special means. For that reason, the present bill is confined to inland waterways. The need in the case of waterways, in other words, appears more clear cut. No user charge of any kind has been paid by those who operate on inland waterways and spokesmen for the waterway industry have even opposed the user charge principle. Such an attitude is completely without justification.

The bill would establish an Inland Navigation Commission consisting of five members, three to be full-time and two to be ex officio the incumbents for the time being of the positions of Secretary of the Treasury and Comptroller General. The Commission thus formed is directed to estimate the cost of inland waterway improvements as defined in the bill, the nature and extent of the use that will be made of such waterways, and to impose on users fair charges

which will approximately compensate the United States for that cost. Provision is made for periodic revisions of charges as experience dictates. No effort will be made to recover costs already laid out in projects no longer used and useful. Users will be asked to pay only for the remaining undepreciated cost of projects now useful, the cost of future projects amortized over a period not to exceed 50 years, and current maintenance and administrative costs.

In performing this task the Commission is authorized and directed to obtain the fullest possible information and to consider any information or views that may be submitted to it by interested persons. It may make reasonable classifications of users, vessels, and types of use. It must publish its orders and determinations to the end that all affected persons will be well aware of their obligations thereunder.

Charges imposed on owners and operators of cargo vessels are to be based primarily on ton-miles. The Commission will also be at liberty to consider and apply any other relevant criteria, such as those specified in the St. Lawrence Seaway Act. There are in addition certain flat charges to be imposed on all vessels. Pleasure craft and Governmentowned vessels, as well as commercial vessels, are included. This is necessary to eliminate the possibility of discrimination against any particular class of operators that might otherwise exist. is the intention of the bill, however, that the Commission shall impose on pleasure craft only such limited charges as are appropriate to the nature of the use made by such craft of inland waterways and the improvements therein.

The scheme of user charges set up by the bill does not contemplate the imposition of charges that vary with the cost of particular works used by particular vessels. Any attempt to establish specific charges for the use of specific locks, dams, channels, and the like would be wholly impractical. Instead, an overall approach has been used whereby the total cost of all inland waterway navigation facilities will be recovered through charges that are uniform throughout the country for the same classes and types of operations. In this way the aim of reimbursement will be achieved through fair and moderate charges that are nondiscriminatory, and no major economic dislocations will ensue. This is exactly the principle applied to financing of the highway program.

The Government is given authority to collect moderate fines for failure to obey the lawful orders of the Commission and to collect by civil action any user charges unpaid. Users are given a right to appeal to the courts from any Commission order they deem unlawful or otherwise improper.

Enactment of this bill would greatly improve the transportation system of the United States and would benefit the general taxpayers. The existence of free facilities at the disposal of waterway operators, moreover, has proved to be a discriminatory burden to other forms of transportation, such as railroads and

pipelines, that pay their own costs plus taxes in addition. Users of inland waterways are an identifiable group entirely able financially to pay the full costs of transportation and, in the case of commercial operators, to pass along to their customers an appropriate portion of those costs. It is an illusion to assume that subsidized transportation by inland Waterway is cheap. In fact, much of it is expensive and wasteful. Transportation subsidies that are not related to economic needs generate excessive capacity which becomes a costly drain on national resources. And, in any event, free facilities enjoyed by waterway operators create wasteful distortions in the economy because each shipper's decision to use water transportation is almost al-Ways dictated at least in part by considerations of special cost benefit provided by taxpayers rather than by the true cost advantages of that mode of transportation. Enactment of the bill Would, therefore, constitute a significant step toward a national transportation system that conforms to economic reality.

Attention is invited to the fact that all of the dates in the attached bill have been corrected so as to advance each date by 1 year:

A BILL TO ESTABLISH THE INLAND NAVIGATION COMMISSION; TO AUTHORIZE THE PROVISION AND COLLECTION OF FAIR AND REASONABLE CHARGES FOR USE OF INLAND WATERWAY NAVIGATIONAL IMPROVEMENTS CONSTRUCTED, MAINTAINED, OR OPERATED WITH FEDERAL FUNDS; AND FOR OTHER PURPOSES

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Section 1. Short Title.—This Act may be cited as the "Inland Navigation Act of 1960."

Sec. 2. Policy.—It is hereby declared to be the national policy to recover the cost of certain inland waterway improvements, to the extent that they are used and useful in navigation and are provided in whole or in part through the expenditure of Federal funds, by requiring payment from the users thereof of fair and reasonable user charges that will in the aggregate approximate the otherwise unreimbursed cost thereof to the United States.

Sec. 3. Definition.—For purposes of this Act,

(a) "capital cost" means the cost to the United States or any of its departments or agencies of constructing, reconstructing (including interest during construction or reconstruction at a rate per annum equal to the weighted average rate per annum paid by the United States on new issues of debt securities, of maturities exceeding five years, during the calendar year next preceding the calendar year in which expenditures are made or to be made, plus one-half percent per annum to cover the administrative cost of borrowing), or procuring any improve-ment to any inland waterway used or useful for navigation of such nature as to be properly attributable to capital account under generally accepted accounting principles, including, without limitation, dams, locks, bridges, cuts, fills, dump areas, rights of way, relocations, lighthouses, channels, canals, buildings, offices, docks, piers, and pilings;

(b) "Commission" means the Inland Navigation Commission established hereby;

(c) "cost," when applied to inland waterway improvements means the Federal funds Paid out or to be paid out in any given Period for

(1) operating and maintaining inland waterway improvements for purposes of navigation (including all administrative elements thereof);

(2) administering and enforcing this act; (3) amortizing over a period not to exceed fifty years from date of the respective expenditures (including interest on the unamortized portion at the rate specified in (a) hereof) the capital cost of inland waterway improvements paid out subsequent to December 31, 1960; and

(4) amortizing over a period not to exceed thirty years from December 31, 1960 (including interest on the unamortized portion at the rate of 4 percent per annum) the approximate undepreciated capital cost of inland waterway improvements used and useful for purposes of navigation at such date, which cost may be considered equivalent to any estimate thereof that may be furnished to the Commission by the Chief of Engineers, United States Army;

(d) "Federal funds" means public monies or credits of the United States or any of its departments or agencies, whether directly paid or applied for purposes mentioned in this act or indirectly so paid or applied through non-Federal agencies;

(e) "improved," when applied to any waterway, means one that has been or is being partly or wholly constructed, maintained, operated, marked, deepened, widened, or otherwise altered in aid of navigation with Federal funds;

(f) "improvement" means any thing or service supplied to or for any waterway in aid of navigation by expenditure of Federal funds:

(g) "inland waterway" means any use and useful improved waterway or portion thereof the improvements to which are primarily for the use of vessels other than oceangoing vessels, except the Great Lakes and their interconnecting channels, the St. Lawrence Seaway, and international boundary waters;

(h) "vessel" means every description of water craft or other artificial contrivance used, or capable of being used, as a means of transportation on water;

(i) "waterway" means any navigable river, lake, canal, channel or other body of water, natural or artificial, located in the United

SEC. 4. COMMISSION.-

(a) To carry out the policy set forth in Sec. 2 hereof there is hereby established the Inland Navigation Commission, consisting of five Commissioners, three of whom (one being designated as Chairman) shall be appointed by the President by and with the advice and consent of the Senate, and two of whom shall be ex officio the incumbents for the time being of the offices of Secretary of the Treasury and Comptroller General. The Commissioners so appointed by the President shall continue in office as designated by the President for terms of two, four, and six years, respectively, from the effective date of this Act. Their successors shall be appointed for terms of six years in the same manner as the Commissioners originally appointed, except that any person appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. No more than two of the Commissioners, excluding Commissioners ex officio, shall be appointed from the same political party. Each Commissioner shall receive basic compensation at the rate of \$20,000 per annum. except that Commissioners ex officio shall receive no additional compensation for their services as such.

(b) Three Commissioners shall constitute a quorum. The principle office of the Commission shall be in the District of Columbia. The Commission shall have an official seal, to be kept in the custody of its Chairman or such officer as he shall designate, which shall be judicially noticed.

Sec. 5. General Powers of Commission.—
For the purpose of carrying out its functions the Commission—

(a) May sue and be sued;

(b) May adopt, amend, and repeal bylaws, rules, and regulations governing the manner in which its business may be conducted and the powers vested in it may be exercised:

(c) May make and carry out any contracts or agreements deemed necessary or desirable

in the conduct of its business;

(d) May appoint and fix the compensation, in accordance with the provisions of the Classification Act of 1949, of such officers, attorneys, and employees as may be necessary for the conduct of its business, define their authority and duties, and delegate to them powers vested in the Commission; and

(e) May make rules, regulations and orders respecting the issuance of licenses and the establishment of charges and requiring the filing of reports by owners, operators, trustees, agents, masters, or charterers of vessels subject to the provisions of this Act in such form and of such content as will aid it in performing its duties hereunder.

SEC. 6. USER CHARGES .-

(a) On or before December 31, 1961, the Commission shall estimate, for each of the calendar years 1962, 1963, and 1964, (i) the approximate cost of inland waterway improvements, (ii) the probable character and extent of the navigational use to which inland waterways will be put by all users, including the United States, the States, and their agencies and instrumentalities, (iii) the probable classes and numbers of users thereof, and (iv) the numbers and types of vessels which will probably navigate inland waterways. Every third year thereafter the Commission shall make like estimates for succeeding three-year periods.

succeeding three-year periods.

(b) The Commission's estimate of the approximate cost of inland waterway improvements for the respective calendar years 1962, 1963, and 1964 may, in the Commission's discretion, be based on the cost thereof for the respective calendar years 1958, 1959, and 1960 as determined by the Commission. Each estimate made every third year thereafter may likewise be based on the cost thereof for the three calendar years immediately preceding the year in which such

estimate is made.

(c) On or before December 31, 1961, on the basis of the estimates provided for in (a) and (b) hereof, the Commission shall determine, subject to the provisions of section 7 hereof, the kind and amount of charges which, when imposed on persons (including the United States, the States, and their agencies and instrumentalities) expected to use inland waterways during the calendar years 1962, and 1964, will yield amounts approximately equal to the estimated cost of inland waterway improvements for that period. Every third year thereafter the Commission shall make a like determination for each succeeding three-year period.

(d) In making the estimates provided for in (a) and (b) hereof and the determinations provided for in (c) hereof, the Commission may use information assembled by its staff or by any other agency of the United States, reported to it by users, or submitted to it at any public hearings it may hold for the purpose. The Commission is hereby authorized to avail itself of services, information, or personnel furnished, on a reimbursable basis when appropriate, by the Corps of Engineers, United States Army, the Maritime Administration, or any other de-partment or agency of the United States. The Commission shall publish in the Federal Register, not later than six months after the making of any estimate or determination provided for by (a), (b), or (c) hereof, an order summarizing the factual basis of each such estimate or determination and the projections and assumptions which may form a part of such basis. The Commission shall afford interested persons an opportunity to submit written comments thereon and shall consider such comments in making subsequent estimates and determinations.

(e) In determining the form and amount user charges to be imposed (subject to sec. 7 hereof), the Commission may establish reasonable classifications of users based on character and extent of estimated use, and types of vessels used, or to be used, and may establish charges varying as among such classifications; but there shall be no variation in form or amount of user charges by reason of particular inland waterways used or to be used. The Commission shall take into account the amounts, if any, by which estimates made under (a) and (b) for prior periods shall have proved excessive

or inadequate.

(f) Determinations of user charges made in accordance with this section shall be published as orders of the Commission in the Federal Register not later than January 15 next succeeding the making of the determination and shall be prominently displayed, in appropriate form, in United States Post Offices and other public places as soon thereafter as may be. Payment of not less than one third of such user charges shall be required not later than June 30 of each calendar year succeeding such determination and shall be made to the Treasury Department pursuant to regulations to be promulby the Secretary of the Treasury. Such payment shall be evidenced by a license or licenses to be issued by the Commission; but the Commission may by order exempt any person or class of persons from the licensing requirement if, in its judgment, the necessity for obtaining or displaying such license would be unduly burdensome and would not further the purposes of this

(g) The owner, operator, trustee, agent, master, or charterer of any vessel subject to this Act shall be liable for payment of the charges imposed by the Commission under this Act.

(h) As soon as practicable after its organization the Commission shall compile and publish in the Federal Register a list of the inland waterways or portions thereof comprehended by this Act and may thereafter from time to time amend or modify such list.

SEC. 7. MEASURE OF USER CHARGES .- User charges imposed hereunder shall be meas-

ured in the following manner:

(a) Cargo vessels.—Cargo vessels of more than five gross displacement tons shall be subject to charges based primarily on tonmiles. To the extent that information deemed reliable shall be in the possession of the Commission, charges may vary according to classes of vessels and classes of cargo carried or to be carried.

(b) Passenger vessels.—Passenger vessels certified for the transportation of 10 or more passengers for hire shall be subject to charges based primarily on passenger-miles.

- (c) All Vessels.—In addition to the charge or charges measured in the manner set forth in (a) and (b) hereof, vessels shall be sub-
- (i) a flat charge per horsepower, in the case of self-propelled vessels of more than 50 installed horsepower; and
- (ii) a flat charge per foot for each foot of overall length, in the case of all other vessels exceeding 30 feet in such length.
- Apportionment.—The Commission shall initially fix charges under (c) hereof calculated to yield approximately 10 per centum of the aggregate cost to be recovered

in any given period. The Commission shall initially fix charges under (a) and (b) hereof to recover the remaining 90 per centum of such aggregate cost at levels such that the aggregate receipts attributable to vessels subject to (a) shall bear approximately the same proportion to those attributable to vessels subject to (b) as the aggregate gross displacement tonnage of vessels subject to (a) to that of vessels subject to (b). In 1965 or thereafter the Commission may by order establish percentages or proportions differing from those specified in this section, and may fix charges accordingly.

SEC. 8. PENALTIES AND ACTIONS.

(a) On and after July 1, 1962, it shall be unlawful for any person to operate any vessel on any inland waterway unless an appropriate license or exemption therefrom has been issued in respect of such vessel, and such license, if any, is carried thereon, and is shown on demand to any person thereunto duly authorized by the Commission. The owner, operator, trustee, agent, master or charterer of any such vessel shall be liable to a fine of \$250 for each offense, each day of operation or use on an inland waterway to constitute a separate offense. Such fine may be recovered in any district court of the United States for the district wherein the defendant resides by action of the United States attorney for such district on information of the Commission.

(b) Willful failure to file any report required by the Commission pursuant to section 5(e) hereof shall subject the offender to a fine of not to exceed \$1,000. Knowingly false statements as to material facts made in any such report shall subject the maker thereof to the penalties imposed for perjury

in the courts of the United States.

(c) The Secretary of the Treasury is hereby authorized and directed to collect by civil action or suit in admiralty instituted in any district court of the United States in which the defendant resides or the vessel is located any and all charges established by the Commission that may be due and unpaid. Such civil action may be taken against any of the persons liable for payment of such charges or fees, but the availability of such action shall not constitute a bar to a suit in admiralty against the vessel.

SEC. 9. REVIEW .- Any person aggrieved by an order of the Commission may apply to the Commission for reconsideration of such order. The Commission shall have power to grant or deny such application and to abrogate or modify such order. Its action in so doing shall become final and conclusive thirty days after notification thereof shall have been published in the Federal Register unless within that period a petition for review shall have been filed by a person aggrieved by such action in the United States Court of Appeals for the District of Columbia Circuit or in the United States Court of Appeals for the circuit in which such person resides. Such court shall have the same jurisdiction and powers in this regard as in the case of petitions to review orders of the Federal Power Commission now or hereafter provided by law. The judgment of the court shall be final subject to review by the Supreme Court upon certiorari or certification as now or hereafter provided by law. The filing of an application for reconsideration shall not operate as a stay of the Commission's order, unless otherwise ordered by the Commission; and the filing of a petition for review shall not operate as such a stay, unless otherwise ordered by the court.

SEC. 10. REPEALS .- All acts, resolutions or parts thereof inconsistent with this Act are hereby repealed.

Hunger for Peace Disturbed by Evil Forces

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. FLOOD, Mr. Speaker, under leave to extend my remarks in the Rec-ORD. I include the following address delivered by Attorney Louis G. Feldmann. national commander in chief of the Veterans of Foreign Wars, at a meeting of the Greater Hazleton (Pa.) Veterans Association on Tuesday evening of this week. Commander Feldmann was born and reared in my congressional district and is a resident of Hazleton, also in my district. Commander Feldmann's fine address appeared in the Plain Speaker of Hazleton on Wednesday, May 25, 1960.

The address follows:

HUNGER FOR PEACE DISTURBED BY EVIL FORCES FELDMANN SAYS HERE

In his keynote address before the Greater Hazleton Veterans Association in Genetti's Pennsylvania Room last night, Attorney Louis G. Feldmann, national commander in chief of the Veterans of Foreign Wars, explained the role of American veterans in the free world fight against Communist treach-

The speech was heard by millions of persons in foreign nations via the Voice of America radio network last night. The ad-

dress follows verbatim.

All of us, at one time or another, by our devotion to the cause of liberty, guaranteed America's security; the future well-being of our people, and what we believed would be the freedom of our children's children.

Although our wartime service terminated. our duty to protect and to preserve the integrity of our Nation has not ended.

Our hard-earned victory over those forces of evil is becoming precariously imbalanced Our desire to live in peace and to guide ourselves to our chosen destiny is disturbed by evil forces more menacing and challenging than those of the enemies we defeated.

This new, yet old enemy, represented by the international Communist conspiracy that calls itself a government, headed by Soviet Premier Khrushchev, watches for an oppor-tunity to ensnare us. It is treacherous, wily, full, of plots and is more powerful than

Whether we acknowledge it or not, because this evil is rampant in the world, we are at this moment at war. The only difference between this cold war and a hot war, is the

absence of continuous shooting.

Daily throughout the world there are casualties and deaths in Khrushchev's cold war. There are those lost in action, and men. women and children driven to despair and death and ruthlessness and terror beyond human endurance.

Khrushchev leads the spy network directed from Soviet Embassies throughout the world. With members of the Communist Party they keep active the cold war in all its vicious, wicked ramifications.

Khrushchev's cold war aggression includes the secret probing for weakness in our military, diplomatic, economic, political, and scientific fields, and in the spiritual life of our citadel of freedom. If we would not

perish, we must be invulnerable in all these, regardless of cost.

This is some of Khrushchev's duplicity: He uses cunning and deceit in diplomacy, instead of frankness and truth;

He interferes in our political life, instead of minding his own business;

He directs the stealing of scientific secrets that are proclaimed Soviet inventions; and

He tries to weaken us spiritually by preaching the false doctrine of peace to entice our clergy, instead of working honestly in the

interest of world peace.

This is the Khrushchev whom the world saw at Paris working at Communist deceit, blackmail, misrepresentation, and doubledealing in promising the free world peace and friendship, while secretly planning continuation of the cold war.

This is the Khrushchev who not so long

ago came here and enjoyed the hospitality, honors, and distinctions accorded men of in-

tegrity, decency, and goodwill.

This is the same Khrushchev who was a Stalin aide when he murdered millions of his countrymen in the inhuman purges in the Soviet Union in the late thirties; same Khrushchev who holds the great Polish people in chains, and who cold-bloodedly ordered the slaughter of Hungarian patriots, Workers, and defenseless students and schoolchildren simply because they wanted to be free.

This is the Khrushchev of consummate deceit who poses as a good family man; who countenances the destruction of all religions and who tried to deceive the vast majority of our people, who are religious, by piously imploring: "As God is my witnesss, my hands are clean and my soul is pure."

How hypocritical can even a deceitful man

be? Pilate, too, after the crucifixion, washed his hands and professed they were clean.

This is the Khrushchev whose every act Our war veterans must watch.

He has continually stated West Berlin must be a free city. By this he means it is to be Sovietized; made part of East Germany because it is antagonistic to communism's planned march to victory over the free world.

Khrushchev's admission for the first time that West Berlin is "antagonistic" should be remembered as a one-word summarization of Lenin's fundamental guide of communism that jeopardizes free people everywhere.

Lenin said, "As long as capitalism and socialism exist, we cannot live in peace; in the end one or the other will triumph—a funeral dirge will be sung over the Soviet Republic

or over capitalism." This is what Khrushchev meant when he said West Berlin is "antagonistic." stark, menacing word provides a club to his conduct in wrecking the summit meeting when the free world refused to hand over the city in which we have a legal right to remain by virtue of our war victory, as well as a moral right in defense of freedom.

Khrushchev will continue to strike at West Berlin with all the stubbornness and tenacity of a woodpecker until it falls into the Communist orbit. Or, seeing it cannot be obtained by persistence, he might try to take it by force that is implicit in his threat to turn it over to his East Germany puppet regime. East Germany is as much a part of the Soviet Union as is, for instance, the Ukraine.

He has also said he would back up with force East Germany's right to the city.

Khrushchev's walking out of the summit should not be too surprising. This is the common practice of the Communists at any conference with non-Communist world representatives. They did it at the old League of Nations; they continually do it at the United Nations when decisions are against their conduct. Now they have practiced it with With humiliation to the heads of state in a gigantic propaganda forum provided by the

free world. They have no intention of reaching agreements for a peaceful world, and in this they follow Lenin's dictum that there can be no peace between capitalism and socialism so long as either exists.

What to expect of Khrushchev and the international conspiracy was made clear by President Eisenhower on his return to Washington from the summit conference deliberately torpedoed by Khrushchev. The President said, "We can be watchful for more irritations, possibly other incidents that can be more annoying, sometimes creating real problems."

When the President of the United States warns us to be alert, it is the duty of all war veterans to close ranks and rededicate themselves with a fervor and determination to be free comparable to that of our Forefather-patriots who originally made us free.

While we have no fear of Khrushchev, the Communists nor anyone else, we nevertheless cannot compromise with communism nor patriotism.

We are Americans or we are not.

We cannot live half-free with our spirit crushed like the millions now in bondage in the Soviet Union, its satellites, Red China, or in Cuba

Our hard-earned peace of World War II has become a Communist-directed cold war. And in it all of us must be as equally alert today in defense of our forms of liberty and freedom: those whom we love, our homes, our property and ourselves, as we were vigilant in uniform.

Those of us who have the honor to stand on the ramparts of freedom, probably mankind's last refuge, have the responsibility to preserve in peacetime what we saved in hu-manity's name in wartime. This is the war veterans' inescapable peacetime duty.

We must make America more impervious to the tensions of the cold war about which

the President spoke.

Veterans can strengthen our country by deepening and broadening our community services to reach more and better our distressed and unfortunate people.

It is our duty as good citizens to help curb all forms of juvenile and adult delinquency. We must help assure all the rights to others we conceive in social, economic, and polit-

ical justice, or accept the consequences Above all, we must make our Nation morally and spiritually stronger through a resurgence of religious beliefs within all faiths to make more positive the brotherhood of man. We can renew and revitalize these efforts within our posts. Here we can, by sheer numbers, become a tremendous force for good in our communities.

Unfortunately, some war veterans have drifted from their post as a focal point of their strength. By returning to it and con-solidating their individual capabilities and efforts, the farce and effect of their work would be felt across the Nation. Then we would be stronger and more resistant to the Communist cold war's effects about which the President said we must be watchful since they will "sometime create real prob-

We must be prepared to give every ounce of energy to fulfill our complete obligation to our country so that all we cherish survives. In doing this we will be remembering our

obligations to our dead comrades' sacrifices

for our own freedom. We cannot forget we owe allegiance to the cause of the 131,000 of our comrades who were killed in World War I; or ignore our solemn obligation to the 409,000 of our fathers and brothers who died for freedom's sake in World War II; or deny our unpayable debt to the 54,000 American youths who perished from this earth in the war in Korea—started with Khrushchev's knowledge and approval, and waged against all free peoples with Moscow's deadly assistance.

We must not abandon the memory of our comrades-ever.

We must serve them in their silence as faithfully as they served to protect our free-

This is our duty to our comrades and to ourselves in this time of crisis that may determine whether we shall be free or whether we shall be slaves.

We can help ourselves by being loyal to American ideals and institutions; by being loyal to our President.

We can strengthen our Nation by avoiding harsh criticism of our foreign policy, and by not apologizing for its objectives. In this we can be guided by the Democratic and Republican national leaderships' support of the President in his travail.

These times call for the deepest resolve. They instill in us devotion to the purposes and objectives of the Veterans of Foreign Wars of the United States. We cannot ignore our own Constitution.

This is the meaning of a veterans' duty in times of so-called peace that Khrushchev and the international Communist conspiracy denies to all the world's people who agonizingly cry out for real peace.

I ask you to go out and get more members to help us in our great and never-ending work for our comrades and for the preservation of our liberty and our freedoms.

Comrades, I shall do my duty-and alongside me, will be you.

Farm Problem: One Way To Deal With It

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. POAGE. Mr. Speaker, it is not too often that one of the great news magazines gives a factual report of the farm situation. We often read stories of the profits made by some great corporate firm in California, of some industrial wheat producer in Montana, or some alleged victim of our farm program.

It is, therefore, indeed a welcome variation to find a splendid factual report in the current copy of U.S. News & World Report. I recommend this report, which is based on the studies conducted by the Iowa State University at Ames. It is short and simple. I believe that it is something which all of us can understand and which is of vital importance to all of us, regardless of whether we live in the city or in the country.

This report shows very clearly just how a return to unlimited plantings would weaken our entire economy. I recommend the article to each Member for most careful reading.

Here is the article:

FARM PROBLEM; ONE WAY TO DEAL WITH IT

AMES, IOWA .- Is there any practical way to solve the farm problem-to end the piling of one vast surplus of grain on top of another? If so, what would the solution cost?

These are questions of interest to taxpayers early in a new growing season. ready, official crop reports point to another big surplus of wheat in the making. All signs are that corn and other grains also will be produced in excess of needs.

To find out if there is an answer to the problem of ever-mounting grain surpluses, U.S. News & World Report turned to the farm economists at Iowa State University. The economists, in turn, spent weeks feeding the facts of the problem into the university's electronic brain. From the answers that the machine supplied, they were able to draw a wide range of conclusions.

Two basic questions were asked of the machine. The questions and the answers, shown for you in the accompanying chart, were these:

1. What would happen if the Government got out of farming, doing away with controls and price supports?

Answer. The result would be wheat crops averaging 1.4 billion bushels yearly in the 1960's, compared to average crops of 1.1 billion bushels in the 1950's. Corn crops in the 1960's would average 4.1 billion bushels, compared to 3.4 billion bushels in the 1950's. Prices of farm commodities would fall sharply from present levels.

2. What would it cost the Government to idle enough land to control production and keep farm prices from falling below certain

levels?

Answer. At a cost of \$1.3 billion a year, enough land could be retired from use to cut production of wheat and corn sharply, bring an end to the piling up of surpluses, and permit present grain surpluses to be reduced to manageable levels by 1970. Price of wheat could be held at \$1.50 a bushel, corn at \$1.30 a bushel. Livestock prices would be firmed, too.

TWO HUNDRED MILLION LESS

The annual cost of \$1.3 billion to reduce grain production compares to an average cost of 1.5 billion to support the prices of wheat and corn in the years 1957 through 1959, a period in which surpluses of wheat and corn increased sharply. The 1.5 billion includes losses on sales of surplus grain, cost of storing and handling, payments for idling land, value of grain given away or sold for foreign currency to countries short of dollars.

In this study, the Iowa economists ap-proached the problem of surplus farm production in the same way industry approaches the problem of keeping its surplus producin hand. First they determined the capacity of the farm plant to produce. Then they calculated how much that capacity would have to be cut back to bring farmers certain levels of price.

The study dealt with wheat and corn, the big headaches in the surplus problem at this time. Other grains fed to livestock-oats, barley, grain sorghum—were included be-cause, like corn, their major use is for livestock feed. They must be considered as part

of the corn problem.

It was found that farmers, if free to run their plant at full capacity, would sow an average of 225,2 million acres each year to wheat, corn, oats, barley, and grain sorghum combined. The machine was asked how much that acreage would have to be cut back to limit production enough to bring farmers an average price of \$1.30 a bushel for corn and \$1.50 a bushel for wheat. The answer was a cut of 62.5 million acres.

If the Government financed this acreage cut by renting land from farmers and putting it in a soil bank, rental payments would average \$20.80 an acre for grain land idled. On that basis, the cost figures out to \$1.3 billion a year.

AT PREVAILING PRICES

The electronic brain calculated that a soil bank of this size would hold grain production down enough to limit supplies fed to livestock, thus keeping markets for livestock and livestock products from being glutted. Prices paid to farmers would be held close to

those now prevailing, except for beef cattle.
As shown in the chart at the right, hogs would bring an average price of \$16.50 a hundredweight, compared to the present price of around \$15.50. Milk would bring an average of \$4.10 a hundredweight, compared to \$4 now. Eggs would be 37.5 cents a dozen, compared to 36 cents; broiler chickens, 16.6 cents a pound, compared to 17.7

Beef cattle would drop from the present average of \$21.70 a hundredweight to \$17.65 a hundredweight. Explanation for this sharp drop is that beef cattle numbers now are at an all-time high. This, the economists say, means heavier marketings in the years ahead, forcing prices down.

A FREE MARKET

In making their study, the Iowa economists assumed that farmers would sell their products on a free market. There would be no price supports guaranteed by the Government. Participation in the soil bank by farmers would be voluntary, with the Gov-ernment "rental" price set at the level needed to net some farmers a better return than they could get by cropping their land.

Under this system, farmers with the most productive land would tend to keep their land in production, while those with lessproductive land would be attracted into the soil bank. As an example, a farmer growing corn in central Illinois, where land is rich and rainfall dependable, would be less likely to sign up for the soil bank than a farmer in northern Michigan, where growing of corn is less profitable.

A soil bank of 62.5 million acres, found to be required to keep wheat at \$1.50 a bushel and corn at \$1.30 a bushel, compares to a soil bank of 28.5 million acres already in operation. The present soil bank, however, contains many kinds of farm land. Total acreage that has been retired from growing grain is 17.2 million acres. All of the land in the soil bank outlined in the Iowa study would be taken out of grain production.

REDUCING THE SURPLUS

The soil bank of 62.5 million acres allows for grain exports to continue at current levels. It also allows for reducing today's grain surplus by releasing it gradually into the open market over a period of 10 years. The goal would be to bring wheat supplies down to 500 million bushels and stocks of corn and feed grains down to 20 million tons. These amounts generally are considered sufficient to guard against drought or other emergencies.

Liquidation of surplus grain by the Government could be used to offset the cost of the soil bank in either of two ways. There could be a "payment in kind" program, by which farmers could get part of their pay ments for idling land from grain stocks held by the Government. Or the surplus grain could be sold in the open market and proceeds used to defray soil-bank costs.

BLOW TO RURAL BUSINESS?

A soil bank of the size suggested by the Iowa study would mean less business in many rural areas. Demand for fertilizer, gasoline, machinery, many items would be cut. To spread this blow more evenly, the economists assumed that no more than 50 percent of the land in any one county would be idled. They also asked the electronic brain to compute the cost of the soil bank if no more than 25 percent of the land in any one county was idled. This would force the cost of a soil bank of 62.5 million acres up to \$1.5 billion a year.

A finding not shown in the accompanying charts is that cost to the Government would be considerably less if target prices for corn and wheat were set at lower levels.

The electronic brain was asked how much acreage reduction would be needed to keep the average price of corn at \$1 a bushel and wheat at \$1.15 a bushel. The answer: full capacity for grain production of 225.2 million acres would have to be cut by 36.3 million acres. Annual cost to the Government would be \$342 million. The necessary "rental" payment per acre would be much less than \$20.80, because farmers could net less by growing grain for the lower prices and would be willing to rent their land to the Government at a lower price.

With grain bringing less, livestock prices

would drop, too.

A MASSIVE STUDY

Conclusions drawn in the Iowa State University study were based on a mass of data, assembled by the economists and fed into the university's electronic brain. In the most detailed breakdown ever made of the Nation's farming areas, the United States was divided into 104 separate growing regions on the basis of soil and chinace.
was the broad base for the entire study. gions on the basis of soil and climate.

problem was assembled. In determining production, normal weather was assumed, trends in increased use of fertilizer, weed and bug killers, and other aspects of farm technology were projected. In determining future de-mand for farm products, the Nation's growing population, increasing per capita in-come, and changing eating habits were con-

All these factors were cranked into the electronic brain. The answers that came out indicate once more than American farmers, unless held down by some means of production control, will outproduce their markets in the years ahead.

AN ELECTRONIC BRAIN LOOKS AT THE FARM PROGRAM

The problem: Overproduction. If present controls and price supports were removed, the machine finds, wheat production would shoot up from an average of 1.1 billion bushels a year in the 1950's to 1.4 billion a year in the 1960's. Corn production would climb from 3.4 billion bushels in the 1950's to 4.1 billion in the 1960's.

Here, roughly, is what would happen to prices by the mid-1960's:

	Prices now	Prices with no controls
Corn (bushei)	\$1.05 \$1.82 \$15.50 \$21.70	66 cents. 74 cents. \$10. \$11.51.
pounds). Milk (100 pounds) Eggs (dozen) Broiler ehickens (pound)	\$4 36 cents 17.7 cents	\$2.66. 27.2 cents- 13 cents-

And: If Government attempted to sup port prices above levels expected by mid-1960's, surpluses would become an even worse problem than they are today.

One way out: Build a bigger "soil bank," taking a total of 62.5 million acres out of wheat, corn, other grains. Remove today's price supports, but keep existing surpluses from depressing the market.

Cost: \$1.3 billion a year, or 200 million less than the cost of present price supports for grains.

Here, again roughly, is what would happen to prices by mid-1960's:

	Prices now	Prices with big soil bank
Corn (bushel)	\$1.05 \$1.82 \$15.50 \$21.70	\$1.30. \$1.50. \$16,50. \$17.65.
Milk (100 pounds) Eggs (dozen) Broiler chickens (pound)	36 cents 17.7 cents	\$4.10. 37.5 cents. 16.6 cents.

And: Today's surpluses could be worked off gradually over the next 10 years. No new surpluses would develop.

Jobs After 40

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. HOSMER. Mr. Speaker, the Journal of Lifetime Living recently published a survey on why employers turn down older workers. Its figures for the various reasons given by employers were the following:

Increased pension costs, 65 percent.

Hard to train, 40 percent.

Think they know too much, 33 percent. Not enough pep or ambition, 8 percent. Poor job performance, 3 percent.

It followed these reasons with facts rebutting every one of them. This welcomed information was set forth in the following article entitled "Who's Too Old To Work?":

WHO'S TOO OLD TO WORK?

Why is it so much harder to get a job after 40? Survey after survey has been made on the subject, but one significant fact stands out: Employers just don't know and must be sold on the advantages of older employees.

The Nation's bosses may argue, for example, that hiring older workers increases Pension costs; that after 40, men and women are harder to train, think they know too much, lack pep and ambition, and show Poorer job performance. By and large, it's Just not so, but employers have to be convinced. And one of the latest to join the campaign of education is the Fraternal Order of Eagles.

Under the guidance of program chairman Robert W. Hansen, the organization, which has some 800,000 members, distributes a portfolio designated to give employers as

Well as legislators the facts.

In a period of full employment and ex-Panding production, of course, the problem of placing older workers isn't too severe. But when a job squeeze is on-and when even slight changes are indicated on the economic barometer-it's the older worker Who feels it first. It's little or nothing more

than calendar age which does it. Yet—
"We all suffer," notes an Eagle bulletin prepared in cooperation with the Building Service Employees International Union.
"Our taxes are raised to pay for public assistance and unemployment compensation for people who should be a part of the work-

ing force.
"Consumers in general suffer. It has been estimated that the value of goods in the United States could be increased by \$5 billion." a year if older people who want to work and are able to do so were given jobs."

This is one of the most telling arguments, but others are more direct. For example, most of the building union's 250,000 employees are over 40, and the record shows that they work hard, pull their own weight on the Job, and are praised as skilled, dependable Workers. Says the union's bulletin:

The older worker produces more, with less spoilage, than the younger, less experienced

His safety record is better; he has fewer accidents.

His judgment is better, and he gets along more easily with his fellow workers.

He is more dependable; he is absent from

the job less often.

He is loyal. He stays with the company longer and respects its policies more. More-over, pension and insurance costs are not sig-

nificantly greater than for the older worker. And older workers "are fully as trainable and adaptable as the younger workers. Their job motivation may be greater because they know the importance of being self-support-

WHAT ABOUT PENSIONS?

One of the toughest nuts to crack has been the employer contention that engaging older workers increases the cost of company pension plans. Spearheading the campaign to break down the age barrier, this publication queried Secretary of Labor James P. Mitchell.

"Pension costs seem to be more of an excuse than a basic obstacle," Mr. Mitchell told the Journal. "While there is obviously a difference in premiums, particularly under insured plans set up like annuities or with more or elss fixed benefits upon retirement, the fact is that over two-thirds of the covered workers are in plans without such rigid benefit formulae."

He estimated that from 20 to 25 percent of the nonagricultural working force is covered by private pension plans. But in some fields, such as the steel and automobile industries, coverage runs from 70 to 90 percent. specific annual premium costs of an annuity of \$100 a month would be, by comparison, \$326 for a worker hired at age 30, \$508 for one taken on at 40, \$668 at 45, \$939 at 50, and \$1,486 at 55.

"But this is not in any sense a typical cost picture under private pension plans," the Labor Secretary pointed out. "Only a small proportion of the plans affecting an even smaller proportion of the covered workers are set up on this basis. Increasingly, private pensions provide benefits based on a percent of terminal earnings (last 5 or 10 years) per month, multiplied by the number of years of service. The ultimate cost to an employer under this type of plan is not much different for workers for one entry age or another, particularly when increases in earnings for long-time employees is one of the variables on which current costs are

Mr. Mitchell stated that vested pension plans, permitting an older worker to obtain accrued benefits when he leaves an employer, can help a significantly large number of seniors find new jobs with companies having retirement plans. But while he felt that vesting could be made a legal requirement of all company pension plans, he doubted the advisability of proposing it. "Vesting," he said, "has profound implica-tions from the viewpoint of labor mobility. It also presents a serious problem in new plans where there is a vast backlog of past service liability."

WHAT ABOUT LEGISLATION?

The Eagles' campaign to end job discrimination against workers over 40 stresses National and State legislation banning the practice. Many authorities feel, however, that efforts to coerce employees would prove ineffective, except insofar as it would call attention to the problem. For instance a Journal survey of employment agencies brought this typical comment: We think that any laws to this effect would be bypassed. Age stipulations, it was felt, are too easy to evade by advancing a different excuse for failure to engage a worker. However, many States have adopted such restraints, national legislation is pending in Congress, and new pressures to enact it can be expected this year.

Meanwhile, the Eagles and others are pressing forward on all fronts. It's a good

Compliments in the foregoing article to the Fraternal Order of Eagles for its work to dispell job discrimination on the basis of age are not the only the Eagles have received. Many labor groups have joined in commending the Eagles on their magnificent efforts. Here are samples:

Printing pressmen: "You are performing a great public service in your Eagle cam-paign for a fair employment deal for hundreds of thousands of Americans in the prime of life who are barred from jobs merely because of arbitrary age restrictions by many plants."—Thomas E. Dunwody, president, International Printing Pressmen & Assistants' Union of North America. New York Council: "Let me compliment

the F.O.E. for constant attention given to the matter of aging population. Legisla-tion is necessary that would make it an untion is necessary that would make it in em-lawful employment practice for an em-ployer to refuse to hire, to discharge, or otherwise to discriminate against any in-dividual because of his age."—Louis Hollander, president New York State CIO Council.

Electricians: "I believe that arbitary discrimination against workers solely on the basis of age shows an appalling disregard for human needs and human dignity. I want to commend you on the leadership which is being taken by the Fraternal Order of Eagles in this important issue."-Gordon of Eagles in this important issue.—Gordon M. Freeman, president, International Brotherhood of Electrical Workers.

Pennsylvania Council: "The Eagle pro-

gram to focus attention upon the problem of the workers over 40 is highly commendable. The Eagles are embarking upon a great effort to correct this abusive avoidance of full utilization of available manpower resources."-Harry Boyer, president, Pennsyl-

vania CIO Council. Radio Workers: "We agree 100 percent with the need for the all-out campaign your organization is starting to enact State and Federal legislation barring discrimination against the employment of men and women over 40 years of age."—Joe Swire, pension director, International Union of Electrical, Radio and Machine Workers, AFL-CIO.

New Jersey Federation: "We are pleased to note the interest taken by the Eagles in the elimination of job discrimination against men and women over 40 years of age, and I am certain it will be highly beneficial."-Louis P. Marciante, president, New Jersey State Federation of Labor.

Hotel employees: "I am acutely conscious of the growing problem of finding jobs for our older citizens, including those who, having passed the age of 40, are ready for the ash heap in the view of many shortsighted employers."—Ed S. Miller, general president, Hotel and Restaurant Empoyees and Bartenders International Union.

Indiana Federation: "I have known for many years the interest that the Eagles have taken in social legislation. I am sure that your organization is most capable of carrying on a campaign in the interest of men and women past the age of 40"-Carl H. Mullen, president, Indiana Federation of

Insurance workers: "Good luck and God bless your efforts. What is needed is simply some action, some pressure to have the rights of this vast segment of the citizenry pro-tected. The Eagles have commenced playing a key role in providing such action and pressure."—William A. Gillen, president, Insurance Workers of America.

Ohio Federation: "I congratulate the Fraternal Order of Eagles for recognizing the serious significance of existing arbitrary job-age ceilings that reflect on the welfare of every American worker."—Michael J. Lyden, president, Ohio State Federation of Labor. Foundry workers: "I certainly am proud

to learn that the Eagles are interested in this question. You can rest assured that our members will go the limit to help workers in maintaining employment so that they can properly raise families in our great coun-"-Chester A. Sample, president, International Molders and Foundry Workers Union of North America.

Cardinal Cushing's Warning

EXTENSION OF REMARKS

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. PHILBIN. Mr. Speaker, every thoughtful American should have the privilege of reading the splendid statement on the summit conference and the Communist conspiracy recently appearing in the celebrated Boston Globe contributed by his distinguished and beloved eminence, Cardinal Richard J. Cushing of Boston.

This statement is factual, realistic, and forceful and it embodies a sound policy toward communism for this great Nation to follow. Indeed, if we had followed this policy in the past we would not now be confronted with the problems that have arisen from the collapse of the summit conference.

Cardinal Cushing is a great and farsighted man, a loyal and devoted American, an acknowledged outstanding spiritual leader. In his admirable statement he has pointed up succintly the aims, the techniques, methods, and dangers of organized communism.

In a relatively short period of time, Americans have witnessed our foreign policy undergoing various apparent changes. Basically, our Nation has embraced and pursued a policy of appeasement of world communism. Only the form of this policy has changed from containment, so-called, to peaceful coexistence.

Every sensible, sane person and government wants to avoid war and protect freedom and that is not an issue so far as the foreign policy of this country is concerned, because that policy is and should be predicated on that objective. As we all know, the real Russian objective in this regard is no different, because the Soviet also wants to avoid war, even though it does not want to install a true, just, lasting peace at this time.

The Soviet policy, as Cardinal Cushing so well points out, is based on keeping the cold war going, and it takes the form of promoting, wherever it can, dissatisfaction, unrest, disgruntlement, violence, and civil insurrection in as many places as possible throughout the world.

The Soviet policy is characterized, too, by incessant saber rattling, or I should say in this advanced day, missile rattling, although there is every evidence to believe that the Soviet's much-vaunted claims to superiority in the field of rockets and missiles is another one of those myths set up by Russian propagandists and parroted by those in our own country who are adherents or sympathizers of the Communist system, or some collectivist system closely resembling it.

I will not take the time here to recount the series of myths, misrepresentations, lies, deceits and frauds regarding missiles, comparative education and the comparative strengths of communism versus free enterprise. The enormity of some of these claims and contentions is staggering, and even more so is the gullibility of a great many Americans who are falling prey to many of the brash, unfounded claims of Russian propaganda.

Cardinal Cushing, with his great prescience and patriotism, is literally a Daniel come to judgment, and I hope his words will be widely read and taken to heart by the American people:

[From the Boston Globe, May 25, 1960] RUSSIANS LURED, TRAPPED UNITED STATES IN PARIS, SAYS CARDINAL CUSHING

(Cardinal Cushing says the U.S. participation in the Paris summit conference is due to the same misunderstanding of communism which led to inviting Khrushchev to visit this country last fall. He calls for a new U.S. approach to the Communists because of the treatment accorded President Eisenhower at Paris.

(In an exclusive article for the Boston Globe, the prelate says the wrecked summit conference surprised and saddened the American people.)

(By Richard Cardinal Cushing)

When the recent Paris summit conference, so highly publicized as the road to peace, resulted in utter wreckage, the American people were taken by a sad surprise.

Our hopes had been raised by the preliminaries, notably by the fraudulent visit of Khrushchev to our country which laid the foundation for the debacle that followed.

We had been seriously misinformed by those who did not consult the documents which come from Moscow which advised the comrades of the world how to betray the people of the free nations.

These documents are readily accessible.

For some strange reason, the critical analysis of them by much of our press, our radio and television, has been denied the American people.

If this was not the case, we would have known in advance that the summit conference was a trap laid for the United States and that any other summit conference will be the same, so far as the present record of the Communists indicates.

We have been warning that "peace" means one thing for the Kremlin and its followers and another thing to us.

It is the double-tongued use of this term by the followers of Marx and Lenin which forecasts that the summit, if held, would be a failure or perhaps a colossal defeat for the free world.

When we yielded to the spirit of appeasement—which Moscow quickly dubbed "the spirit of Camp David"—we prepared the way for a defeat by Khrushchev, either in the form of our complete or partial capitulation to Moscow's demands for the betrayal of Berlin, for unilateral disarmament, or for the plan of Moscow to put the blame for wrecking the conference on us.

If we learn from our experiences to resist further appeasement, we must recognize the Communist definition of "peace."

Such recognition is long overdue, for the term has been used over and over again to befuddle us as a nation and to bring about our great retreats for the alleged sake of "peace."

The importance of this recognition becomes all the more urgent today since the Communist Party in our own midst has raised this slogan in the Worker of May 22: "Let the Plain People Speak for Peace."

This is the title of the leading editorial which follows on the heels of the summit debacle.

In that editorial we read:

"The Paris Summit Conference was doomed to failure by Washington, by the deeds of the present administration. "Now the tension builders and war provocateurs who boobytrapped the summit by a series of calculated moves are busily trying to enmesh our people in a web of lies, to keep the cold war, to put the blame for the failure of the summit conference to get underway on Khrushchev and the Soviet Union."

And lo and behold. Since Khrushchev and Soviet Russia are blameless in Communist eyes, it is our own Government which must be accused of causing the blowup at the summit conference which Khrushchev had planned to scuttle from the very beginning.

FROM "PEACE" TO CONQUEST

Be it established once and for all that when the Communists, both in the Kremlin and here, refer to "peace" or "peaceful coexistence" they have no other idea in mind but the conquest of the world by Soviet power.

Anyone who knows the fundamental philosophy or world outlook of Marxism-Leninism knows that.

For "lasting peace" will come about only, in the Communist lexicon, when the earthly paradise or Communist society has been established.

We could go further and demonstrate another principle of Communist teaching, particularly stressed by Lenin and expressed well by a leading directive article in the Peiping Review for April 12, 1960.

That article incidentally is entitled "Im-

That article incidentally is entitled "Imperialism—Source of War in Modern Times—and the Path of the People's Struggle for Peace."

And "imperialism," under Lenin's definition, is precisely the name given to "the bourgeois nations" or what we call the countries of the free world.

It is they who are to blame for all war and the Socialist countries are brazenly declared to be immune from any blame at initiating war because—believe it or not—they do not engage in "exploitation of man by man."

From that viewpoint we can comprehend that the attack on Finland, Korea, the Baltic countries, and all other war assaults by Soviet power are always blamed on the other side, on the victim of Soviet aggression.

Moscow confirms this double-tongued definition of "peaceful coexistence" over and over again, but notably in the March 1960 issue of International Affairs coming here from the Soviet Capital.

There it is said quite boldly that peaceful coexistence cannot exist in the realm of ideology.

And to give the comrades the full understanding of what is meant by this peculiar statement, Khrushchev himself, is given as the authority.

There Khrushchev is quoted as saying:
"In matters of ideology, we have always stood, and will continue to stand, like a rock, on the basis of Marxism-Leninism". Then it is added that "communism is the most humane ideology," whose lofty character will conquer the whole world. That is the true aim of peaceful coexistence

Accordingly, it is reported quite sharply that peaceful coexistence does not mean any retreat from socialism in the peoples democracies nor does it mean that capitalism is granted immunity in the rest of the globe.

To make the matter even clearer, it is stated emphatically that peaceful coexistence is "by no means tantamount to a recognition of capitalism's immortality in the countries where it obtains today"

In other words, communism's fundamental world outlook contemplates peaceful co-existence as a means of strengthening Soviet control over the captive nations and as the means of extending Soviet control by infitration and subversion (leading to violent overthrow) over the rest of the world

Such being the case, the "peace" sought for at the summit conference by the Kremlin was to be the expansion of Soviet do-

Out of our own experiences, we should have known in addition that the word 'peace" in Communist mouths is one of those exhibits of "Aesopian language" designed to trick and trap us.

It was in the name of peace that we were tricked at the end of World War II. We were deceived into aiding Soviet con-quest of all the nations now behind the

Iron Curtain.

It was in the name of peace that Joseph Stalin conducted the cold war, for the purpose of consolidating his control over the satellite nations and of laying the foundation for further Soviet expansion.

Through this cry of peace Stalin was able to create enough uncertainty and delay in American policy to achieve his goal of fastening his iron heel upon Eastern Eu-

rope and much of Asia.

With this new cry in 1960 by the Com-munists and their friends that a Moscow-made "peace" should prevail as the policy of the United States, we should be mindful of the true significance of what "peace" means to them.

We must realize once and for all that peace is not attained by appeasement. We must recognize that the time has come for us to take a firm stand, such as formerly Won for us an honorable period of peace in our stand at Quemoy and Matsu and for

We must dedicate ourselves to the proposition that we will not disarm one lota without a policing system which is foolproof

and complete.

In the light of these thoughts, the lesson of the summit conference that never started should also prompt us to present to the World the great moral issues involved with Soviet barbarism.

Emphasis on such issues is not only demanded by justice and the sense of true Peace; it would also put the Soviet dictatorship at a distinct disadvantage. It would Dut the Kremlin on the defensive.

Why then cannot we of the United States of America raise in a sharp and world-resounding way the question of the captive

nations?

At every turn, we are presented with the pathetic faces of those million who have been betrayed into Soviet hands ironically in the name of "peace."

Again we might ask: Why do we not raise before the world the whole issue of the bloody religious persecutions which are going on everywhere behind the Iron Curtain?

There is no excuse for the half-hearted Protests we have made, when we consider the huge noise that Khrushchev makes over the slightest of incidents.

The Wisdom of Youth

EXTENSION OF REMARKS OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. FOLEY. Mr. Speaker, I share with Our colleagues the advantages accruing from a discussion of issues with constituents through the mails. Often a particular piece of correspondence stands Out for its clarity and logic. Recently I received a number of fine letters from students attending Leland Junior High School in Bethesda, Md., where they took

part in what was apparently a most stimulating discussion on the United States in the world of today. Under leave to extend my remarks. I am proud to include comments and suggestions extracted from these cogent letters. This is truly a case of learning from the wisdom of youth:

"Improve our educational facilities. Many of today's students will be in tomorrow's race with Russia"-Mike Baker.

"I feel that if the school year were divided into thirds and two-thirds of the pupils were going to school at all times, children could get a better education"—Gregory Berryman.

"My opinion is that instead of using the money unwisely we ought to have higher taxes and use the money for our country's needs. Then it would help the health, edu-cation, and welfare problems"—Christina Bradley.

"More civil defense work, that is, more active and frequent drills would cause more people to think seriously about it and do something"-Alan Cohen.

"After all, there aren't too many better ways of spending money than spending it to keep our country free"—Marc Cooperman.

"I think the United States should continue the program of sending food and clothing to the other countries that don't have enough of these things"—Lula Dortch.

"It is also very important that everyone of age vote. Because this is the basis of democracy, it is essential that everyone do so"—Sandra Engler.

"Concerning the problem of unemploy-ment, I think there should be schools to teach certain skills. In these the unemployed would be taught trades that need workers"—Robert J. Goldstein.

'I think that unless we get organized and quickly, Russia is going to win a silent and secret war, a war of disorganized and lazy people (namely, Americans), and eventually the space race"—Elizabeth Anne Hall.
"Since the individual countries want to

keep control over their schools, I think that the Senate and the House of Representatives should parcel out money to the countries as they see fit"-John N. Lockard.

"If the American people would give up some of the luxuries of their soft living and donate funds to the space budget, I am sure they would benefit from that donation in the

years to come"-Mimi Michelet.

"In a general sense I am for foreign economic aid and against foreign military aid. I feel that economic aid will keep us political friends with the countries we help, but only if it is handled with the utmost of care. In other words to help but prevent resentment between countries. This type of assistance has helped curb Communist expansion"-Roger M. Moak.

'If we were to pay our teachers adequately throughout the country, it would help produce the caliber individual we want for our children in the educational department"-

Martin M. Metz.

"If we are going to keep a strong and democratic Nation, children should be educated so that they can carry on our democ-

racy wisely and justly"—Lisa Nurick.
"For our own security, we cannot let ourselves become weaker than the Soviet Union, and be unable to defend ourselves against communism"-Beth Nordbeck.

"Let us give increased aid to the new African nations. If we help them and show them the right way, without threats, they will become valuable allies in democracy"— Paul R. Panitz.

"We should not be as selfish. We should not spend all of our money on ourselves; instead we should contribute to hospitals, schools, charities, and especially toward helping undernourished countries. By contri-

buting to these poorer countries, we would spread the thought of peace throughout the free world"-Steve Rosenberg.

"I think it would be a good idea to try and cut down on the red tape that now prevails in the space projects"—John J. Thompson.

"It is the overall defense of our one Nation, not the glory of any one service, that is necessary"—Sharon Yager.

"My suggestion for Congress would be to have more discipline and less politics in their daily work"-Dee Zimmerman.

RCA Praises Wilkes-Barre Cooperation

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. FLOOD. Mr. Speaker, as the Members of this body know, my congressional district, comprising Luzerne County, has suffered serious economic difficulties for many years, especially caused by the recession in the anthracite coal industry, our major industry. In view of the many thousands of men who are unemployed in my district, you can well imagine how heartening it is when a company of the stature of RCA decides on locating an installation in my area, thus affording gainful employment for many who, otherwise, would continue on the rolls of the unemployed. The new RCA plant is now in the process of construction and we are looking forward with great anticipation to the day in the near future when its operation will get underway. We, in Luzerne County, are delighted to have RCA join the Greater Wyoming Valley com-munity. In line with this happy development, I include, as part of my remarks, an interesting newsstory from the Wilkes-Barre Times-Leader of Tuesday, May 24, 1960:

RCA PRAISES WILKES-BARRE COOPERATION-OTHER FACTORS ALSO CITED IN SELECTING LOCAL PLANT SITE

HARRISEURG, May 24.—Pennsylvania's continued economic health depends on the maximum use of every remaining industrial site in the State, says a prominent consultant engineer.
Michael Baker, Jr., head of a firm bearing

his name at Rochester, Pa., added yesterday that competition for new industry is tough

and is getting tougher.

He spoke at a panel session on industrial sites and buildings during the fourth annual Pennsylvania industrial development

clinic, which ends today.

Clifford L. Jones, Hazleton, also a member of the panel, said partially constructed buildings that can be finished quickly give a community an advantage in seeking industries that are in a hurry for more space.

The clinic was inaugurated in 1956 when the State established a program to assist local areas overcome unemployment problems through the Pennsylvania Industrial Development Authority.

Norman Caplan, communications products manager for the Radio Corp. of America, said RCA chose Cannonsburg and Wilkes-Barre for plants costing \$6 million because of an unsurpassed spirit of cooperation by public officials, labor leaders, business and industrial neighbors and residents.

He said the firm also was guided by these points in its selection of the two sites:

Proper educational, recreational, and living facilities to atttract engineers to the area.

A good labor supply, including women "who have proven time and again more stable on certain types of jobs and frequently are more dextrous."

Transportation facilities.

Adequate water and electric power.

Needed: A Tax Incentive for Home Improvements

EXTENSION OF REMARKS

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. CASEY. Mr. Speaker, there are today approximately 660,000 units of private housing in our Nation that are standing dilapidated—and vacant.

In addition, there are 4.5 million occupied homes that are deficient in some major respect so as to render them substandard.

This is a frightening situation, especially so when Congress is called upon annually to vote millions of dollars for public housing and urban renewal projects.

I, and the people I represent, believe that the Federal dole is not the answer. We believe the answer is to provide an incentive for these people to maintain and repair substandard dwellings.

Today, I have introduced legislation which I believe will go far toward ac-

complishing that objective.

This is a multipurpose bill. Basically, it will permit income tax deductions as an incentive for home and property im-

provements.

This is the tradition that has made our Nation great. In contrast, the philosophy of the Federal handout is sapping the vitality and independence of our people. I believe the finest objective the Federal Government could set would be a goal of permitting our people to help themselves, thereby regaining a feeling of independence and pride.

But there is more involved here than the basic difference of philosophy of government.

In addition to providing an incentive for home and property owners, this bill if enacted would give a tremendous shot in the arm to our sagging economy. Plumbers, electricians, carpenters, roofers, glaziers, paperers, contractors, hardware and lumber stores, all phases of the building and construction industry would benefit from a surge of business. So much so, I believe, that most of the revenue loss generated from passage of this bill would be recaptured in rejuvenated business activity, increased income, and profits.

In addition—and this is no small matter—our State, county, city, and school governments would benefit tremendously as substandard housing is repaired and its valuation is increased on the local tax rolls.

Here, indeed, is where the Government and this Congress can enact legislation and properly assert the claim of "Federal aid"—for this is the type of "aid" I believe most Americans would prefer we dole out: aid our citizens and our local governments to help themselves.

Let me briefly explain the provisions of this bill. It would permit a taxpayer to deduct a maximum of \$750 during a taxable year for expenditures made to repair or improve property used as his principal residence.

In addition, the owner of rental property would be permitted to amortize over 60 months the expenditures made for repairs, replacements, or improvements intended to increase the livability, utility, safety, or value of property. Improvements or additions which would increase the total amount of floorspace used for dwelling purposes would not be deductible.

As you well know, under our existing Internal Revenue Code, a homeowner cannot deduct any expense for major improvements to his home. He can—if he itemizes deductions—subtract only the interest paid on a loan for such improvement or repair.

Nor do landlords have an incentive to repair substandard housing. While they can declare depreciation—they are not permitted to deduct expenses for capital improvements such as remodeling, replacing a roof, and so forth.

Is it any wonder that so much of our greatest national asset, our housing, is substandard?

The answer is obvious—and the fault is ours. Through our restrictive tax laws, we have built in an incentive for home and property owners to keep housing substandard, for they can ill afford to make the needed repairs. Do not think that we are not paying for such shortsightedness. Reflect but briefly on the billions spent in the past decade for public housing and urban renewal.

Let me set forth a few statistics that point to the great need for this legislation:

In the 1956 National Housing Inventory, nearly 2 million owner-occupied housing units were reported to be dilapidated. Of this number, 1.7 million were occupied by owners whose annual incomes were less than \$6,000.

Is it not obvious that these people—battling the high cost of living, inflation, and day-to-day expenses—cannot afford and have no incentive to make extensive repairs to their substandard dwellings?

This same survey showed that another 4.5 million homes are deficient in some major respect so as to be substandard.

The occupants of many of these dwellings in need of repair are our elderly citizens—and those with large families who can afford no better. The enforcement of housing codes to bring such substandard housing into the realm of safety imposes a severe financial strain upon their limited resources. Passage of this bill will not only offer them an incentive, but a measure of financial and tax relief as well,

Equally important as the rehabilitation of existing substandard housing is the prevention of deterioration and decay in homes that are not yet blighted. How many homes in each of your districts are now in need of paint and repair—and how long will it be before they become part of a slum? While we have spent billions battling the effect, we have neglected entirely the cause.

There will be those who argue that passage of this bill will "cost" the Federal Government severely in tax returns—that the answer lies in heavy Federal spending for urban renewal and public housing, programs on which billions of tax dollars have been lavished. A fallacious argument, indeed. The street of the Federal dole is a street of no return. It has but one destination: fiscal insolvency, dependency, bureaucracy.

I sincerely believe the bill I have introduced today points the way to a sensible and equitable solution to one of our Nation's most pressing problems, that of adequate and safe housing for our citizens. By passage of this bill, we can extend the hand of cooperation to our people and our local governments, who need it most.

I strongly urge my colleagues here to consider the measure closely and join with me in seeking its early adoption.

Guided Missile Runs Wild—Shot Down by Jet Fighter

EXTENSION OF REMARKS

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. JACKSON. Mr. Speaker, an interesting dispatch came over the Associated Press wire last Saturday May 21 reporting an incident that occurred during a crowded Armed Forces Day demonstration. Quick action by the U.S. Air Force averted an accident and pointed up the effectiveness of our air-to-air missile defense against possible enemy missile attack. The Falcon missile that destroyed the wayward Matador, incidentally, is radar-guided. It was produced in my district by the Hughes Aircraft Co.

The dispatch follows:

ALAMOGORDO, N. MEX.—A big Matador missile got away and was shot down Saturday while an Armed Forces Day crowd watched.

Maj. J. D. Fowler, flying an F-106 jet fighter, caught up with the jet powered guided missile and bagged it with a Falcon rocket.

The Matador, which is supposed to have a system to destroy itself if it goes wild, went into the desert about 8 miles northwest of Belen. The town is roughly 125 miles north of the Air Force Missile Development Center, where the Matador was launched. The Matador launching was not part of the program, but the visitors attention was called to it since the launch site was in view. The big Matador, the size of a jet fighter, was to be tested over the huge White Sands Missile Range. A program to

check out the missiles has been underway there many months.

A pilot in an F-100 "chase" plane was flying near the missile when it went wild. Chase planes are sent along to shoot down Matadors if the built-in destruction system doesn't work.

But the chase plane couldn't catch the Matador. So the pilot radioed to Holloman Air Force Base, where the missile center is

located, for help.

Major Fowler, who had just made a showy pass over the crowd and was circling high Over Mescalero, about 50 miles northeast of the base and about 75 miles southeast of the Matador and the chase plane, went after the missile.

He caught up with it and blew it up with the Falcon.

The Matador was not carrying an explosive warhead.

Hidden Tax Incubus

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. CURTIS of Missouri, Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the St. Louis Globe-Democrat of Monday, May 23, 1960:

HIDDEN TAX INCUBUS

A man buys a suit. He grumbles over having to dig deeper for the State sales tax. His temper would come to a rapid boil if he knew that the store price included no less than 115 other taxes.

A woman buys a hat. She pays 150 taxes. At the grocery store a single egg represents 100 taxes; a loaf of bread, 151.

Taxes on your house and property? You don't realize a fraction of the levies the house is costing you. To be exact, 600 taxes, according to Tax Foundation, Inc., an independent tax research firm.

The cost of government represented by this never-ending round of taxes has built up until it takes a bigger chunk of a family's

income than the food budget.

In 1950, the Nation spent \$58 billion on food and tobacco, when tax receipts were \$55 billion. Last year, food cost \$85 Government operations cost \$124 billion.

Director of the Budget Maurice H. Stans said recently the Federal Government "is piling up c.o.d.'s for the future at an

astounding pace."

As the Globe-Democrat recently noted editorially, a variety of present Federal obligations with huge unexpended balances in defense spending come to a total of \$98 billion for future spending.

Add this \$98 billion to the \$290 billion current debt and to the \$350 billion of future obligations such as retirement, veterans' compensations, social security—and you get the "almost incredible" total of \$750 billion.

(The quotes are Mr. Stans'.)

In the previous session of Congress, more than \$326 billion was allocated over an average 5-year period for major new spending

In the final analysis, it is only the people who pay the taxes. Much of the income tax of business and corporations is included in the cost of doing business and is passed on somewhere in the wholesale and retail transactions to the customer.

Most increases in prices on conusmer goods are caused by tax measures.

Our representative form of government was created through resistance to tax oppression. Taxes today dominate the lives of every American man, woman, and child.

The citizens alone have the final say on government spending. How much longer will they permit their incomes to be eroded by myriads of tax bites they feel but never

Continuing Aid

EXTENSION OF REMARKS OF

HON, SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. CONTE. Mr. Speaker, I submit this for the Appendix to the RECORD because it is another example where, when logic and intelligent reasoning are applied over partisan considerations, the conclusion is the only one at which one can arrive.

The editorial follows:

[From the Boston Herald, May 10, 1960]

CONTINUING AID

The President has won the first round in his foreign aid fight. The \$4 billion authorization bill agreed to by the House and Senate conferees is only \$88 million short of the White House request, which is a better than average response.

But the big test, as Mr. Eisenhower is well aware, comes on appropriations, not authorizations. And foreign aid opponents are hoping to knock \$1 billion out of the spending program when it reaches the House

Appropriations Committee. Was the President justified in urging Congressmen to lay aside party interests on this issue and vote the full program? We think so, and we hope the House and Senate lead-

ership will take this view also.

Foreign aid is, of course, not above controversy or criticism. The way it is administered, what it costs, to whom it goes, the emphasis on military as distinguished from economic aid, these and other questions need to be discussed fully and freely. But the underlying issue-whether to continue foreign aid in an adequate and meaningful way is no longer debatable.

This is the last year of the Eisenhower aid program. The President in 1961, whether he is Mr. Nixon or one of the Democratic hopefuls, is bound to have different ideas, just as Mr. Eisenhower had different ideas from Mr. Truman. But these differences don't and won't go to basics. The foreign aid program, which was launched by the Democratic postwar administration, has been carried forward in all its essentials by Mr. Republican administration, Eisenhower's and will continue to be carried forward by the next administration, whether Democratic or Republican.

It is this continuity which Congress is being asked to preserve now. The President is pleading, not for the superficials, but for the backbone of foreign aid. A \$1 billion cut would break that backbone.

"It would be," as the President warned, "for America and all the free world, a crushing defeat in today's struggle between communistic imperialism and a freedom founded in faith and justice.

"It would mean, within a matter of months, new international tensions and new national problems of the utmost gravity for everyone of our citizens.

"It would mean the virtual abandonment of an effort which has yielded our Nation greater benefits in security, better neighbors, and opportunities for expansion of profitable trade than has been achieved by any comparable expenditures for any other Federal

This is too much to destroy in the name of partisanship. Congress must face that fact.

Open Skies

EXTENSION OF REMARKS OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVE

Thursday, May 26, 1960

Mr. HESS. Mr. Speaker, under leave to extend my remarks, I include the following editorial, from the Taft broadcasting in Cincinnati.

This editorial was telecast on WKRC-TV on Monday, May 23, and broadcast on WKRC-Radio four times on Tuesday, May 24, and was seen and heard by an estimated 349,778 persons,

The editorial follows:

In our country everyone is privileged to make suggestions. Tonight we have a suggestion for the President of the United States, and we've never been more serious.

Mr. President, we suggest you issue an invitation to the Soviets to fly one of their own unarmed reconnaissance airplanes over the United States at a time and place of their own choosing. Khrushchev has rattled the saber and accused us of aggression because an unarmed plane flew over 1,200 miles of sacred Russian soil. Our proposal can show the world that no truly peace loving people have anything to fear from aerial inspection.

Mr. Elsenhower has forthrightly urged a policy of "open skies" to guard the world from surprise attacks. And for 4 years our own planes have flown photo missions along and across Soviet borders. Of all these flights the Russians have complained of only one * * * presumably because of all these flights they have been able to stop only one. Meantime, Russian espionage has run riot around the world. But Soviet spies have preyed upon the treason of other citizens, and the misuse of diplomatic missions.

Today, any nation's air space can be violated by American or Russian satellites every few minutes. Unarmed aircraft differ from satellites only in terms of altitude. We cannot permit accusation by altitude to frighten us to the brink of war * * * or worse yet, the brink of surrender.

How could we be sure a Soviet reconnaissance flight would not turn into a bomb-ing mission? One way would be to inspect the plane before takeoff. As a practical matter for the U.N., we could be sure that if the Russians wanted to launch a sneak attack, they would not depend upon a single small airplane to do it. America's massive retaliation strength would make this suicidal for them.

The great challenge is that, through such an invitation to the Soviets, the United States can show the world it means every word it says in behalf of peace. It would demonstrate that a strong free nation has nothing to fear from aerial scrutiny.

Maybe Russia is not even capable of answering this challenge. More probably, the fear of divulging its own weakness is too great. Our proposal demands that those who talk of peace while sharpening their knives either put up or shut up.

We would like you to let us—or better still, your representatives in Washington know what you think of such a proposal.

Mutual Security

EXTENSION OF REMARKS OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. JACKSON. Mr. Speaker, those who were disappointed with the early collapse of the Paris summit meeting were those who have come to believein vain hope rising out of other disappointments-that there had been a real change in Soviet objectives and attitudes.

There have been other periods of socalled thaw in the cold war, but while personalities change with each successive Communist regime, Soviet objectives do not. I would like to point out the relentless consistency of Soviet aggressiveness as evidenced by their actions since World War II:

Pressure exerted on Iran for the maintenance of Soviet forces in the north of Tran

Territorial demands on Turkey, including claims to bases in the straits.

Fostering of guerrilla warfare in Greece and support for the Communists who were stirring up civil war.

Seizure of control of the countries of eastern Europe, culminating in the coup d'etat in Czechoslovakia in 1948.

The rejection of the Marshall plan and subsequent efforts to cripple the economic recovery of the West.

The organization of the Cominform. Violations of the Potsdam agreement. The year-long Berlin blockade.

The blocking of peace treaties with former enemy countries.

The ruthless suppression of the Hungarian revolt.

The continued maintenance of large Soviet forces throughout eastern Europe and the building up of "satellite" forces.

The endlessly recurrent abuse of the veto in the United Nations.

The deliberate avoidance of a realistic program for the ban of nuclear testing. The rejection of realistic proposals for

disarmament and control.

The thwarting of the summit conference in Paris this month by means of insults and threats of a nature seldom, if ever, voiced by the premier of one power to the chief of state of another.

This catalog is by no means inclusive of all Soviet-inspired or sponsored aggressions; equally noteworthy are the proxy pressures against the United States and the free world recalled by Korea, Quemoy, Matsu, Tibet, Vietnam, Laos and the Indian border.

These actions demonstrate less variation than consistency in the pressure pattern of Soviet diplomacy. That these 15 years of Soviet probings and seizures have been no more successful than they have, can be attributed solely to the resolution of the United States and its free world partnership. But even this partnership, were it sustained by determination alone, would be in-sufficient to contain and repel the tide

of communism. The resolution of any alliance must, in the final analysis, be based on economic stability, internal security, and military capability to resist overt aggression. The mutual security program helps to provide these essential elements of national strength to those underdeveloped nations who could not otherwise support the burden of modern armaments or dare to stand alone against the Russian colossus.

The events of the last few days have proven the solidarity of our mutual commitments to the North Atlantic Treaty Organization. There can be no doubt that this solidarity is possible because of the strategic posture of our allies and ourselves are able to create in the Soviet mind. However, we are at a critical time in the history of our mutual security program-there are those who would, in effect, withdraw their support from our President at a time when political unity is most needed both at home and abroad. There are those who would weaken free world solidarity, if not hasten its actual destruction by opposing the President's budget request for the mutual security program in the coming year. Not only would failure to support the program retard the modernization of allied forces and deny them more effective weapons when they need them most, but it must even appear to our allies that the United States is beginning a withdrawal to its ramparts behind the Atlantic and Pacific Oceans.

It is one thing to tingle with patriotic outrage here in the United States while the President is insulted in Paris: it is quite another to hear your country threatened with a Russian rocket salvo when your country happens to be within marching distances of the Cossack. It is not enough to admire the courage and steadfastness of those friends who are so much closer to the embrace of the bear than we are ourselves; they must be given tangible evidence of our faith in their loyalty to the cause of freedom and human dignity.

There can be no question of hesitancy on our part at this time. The President. the Secretary of State, the Secretary of Defense and the Joint Chiefs have all been emphatic and unanimous in their espousal of the mutual security program. I say that the Congress must also be unanimous in its support of this program in its entirety. To do otherwise may embark us on the fatal path to peaceful nonexistence.

Yes for Jobs To Help Youth

EXTENSION OF REMARKS OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. LINDSAY. Mr. Speaker, today's issue of the New York Herald Tribune has an editorial entitled "Yes for Jobs To Help Youth." I call the attention

of my colleagues to this editorial which comments on New York State's new agency established for the purpose of finding work for youngsters between the ages of 16 and 18 who are out of school and want a job. The editorial follows:

[From the New York Herald Tribune, May 26, 1960]

YES FOR JOBS TO HELP YOUTH

YES spells Youth Employment Service. This is the new State agency, established with \$250,000 Federal funds, which has the objective of finding work for youngsters be-tween ages 16 and 18 who are out of school and want a job.

In New York City the program seeks to assist 10,000 persons through 23 community centers. And if this amount of energy can be directed to constructive purposes, it follows that the State will have curbed a lot

of juvenile delinquency.

As Governor Rockefeller points out, an "immense reservoir" of young people is building and has got to be used to good ends. Find jobs for them, he says, "and one of the most critical problems of youth can be solved."

But YES, for all its affirmative call, is only the connecting mechanism between boy (or girl) and job. Somebody else still has to provide the opportunity. Here the challenge is up to the business community.

"I urge," says the Governor, "every businessman in the State to help." It's an appeal that every employer should heed. Where the youngster has the will to work, by all means give him the chance.

Nik's Quick Switch

EXTENSION OF REMARKS OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. DERWINSKI. Mr. Speaker, public opinion, reflecting as it does the true sentiments of Americans in relation to the recent Soviet-torpedoed summit conference, is clearly shown in an editorial from the Chicago American of May 23.

which, I believe, is worthy of attention: NIK'S QUICK SWITCH

A quick switch typical of Soviet maneuvering, Nikita Khrushchev has suddenly taken pressure off the Berlin issue. shattering the summit meeting with his screeching denunciations of the United States and threats to foreclose western rights in West Berlin, Khrushchev stopped off in East Berlin on his way home and said there was nothing to worry about-yet.

He offered to hold off action on a sepa rate peace treaty with East Germany until after another summit meeting, to be held with President Eisenhower's successor representing the United States. He promised to do nothing to sharpen East-West conflicts in the meantime.

But Khrushchev laid down two conditions: The new summit meeting must take place within 6 to 8 months, and the west must take no "unllateral action" on Germany before then.

The speech was plainly designed to bring about a sudden lessening of the tension that Khrushchev had carefully built up at Paris. [At the same time, the Communists reacted with astonishing mildness to the forced landing of an American Air Force C-47 in East Germany; this was a fine opportunity to denounce the United States but the Reds didn't take it.]

The technique of building up painful tensions and suddenly relaxing them is a fundamental part of soviet psychological warfare.

C. L. Sulzberger, foreign news analyst of the New York Times, has pointed out that this technique has a scientific basis. The Russian biologist Ivan Pavlov discovered that the nervous stability of animals could be broken down by subjecting them to contradictory signals; by mixing "go" and "stop" signals for instance, he could put dogs through successive states of hysteria, apathy, and complete submission.

Refinements of Pavlov's techniques were used by the Chinese Reds in brainwashing American prisoners of war in Korea. The parallel in Soviet policy, alternating shocks and tension with soothing speeches, is certainly no accident.

Khrushchev kept cold war initiative firmly in his own hands. His warning against unilateral action by the West was Purposely vague; he can accuse the West of violating his terms any time he chooses.

The Berlin speech also kept progress toward peace firmly tied to further summit meetings. The reason is obvious: Such meetings give Khrushchev virtual control of the whole international situation, as he demonstrated in Paris.

The first and essential conclusion from all this is that there must be no more summit meetings. Such meetings put Western negotiators under the worst possible handicaps. They dangerously involve national prestige: put a premium on haste (Western heads of state can't take an indefinite leave of absence from their jobs, and must con-clude within days matters that would normally take months of negotiation; they sub-Ject the negotiators to an unholy glare of Publicity; and they make the free nations' leaders look like dictators settling the fate of the world. Summit meetings are ideal for Khrushchev and deadly for the West.

The second conclusion is that we should stop reacting to Khrushchev's signals, ignore the day-to-day zigzags of the Communist line, and concentrate on stopping the Communists' unchanging drive toward world domination.

Education Debate

SPEECH

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. FULTON. Mr. Speaker, at this point I should like to call to the attention of the Members a telegram which I have received from Mrs. Horace H. Johnson, president of the Pennsylvania Congress of Parents and Teachers. Mrs. Johnson lives in Bridgeville, Pa., near Pittsburgh, and the telegram was sent from a meeting of the congress which was being held in Philadelphia on the event of our consideration of the education bill in Congress.

The telegram is as follows:

PHILADELPHIA, PA., May 24, 1960. Hon, JAMES G. FULTON, House Office Building, Washington, D.C.:

As president of the Pennsylvania Congress As President of the Pennsylvania Cong. of Parents and Teachers I respectfully re-quest that this telegram be read on the floor of the House on Wednesday when Federal support for education is being debated and discussed.

The Pennsylvania Congress strongly favors Federal support for education as provided in the Senate bills, as amended by Senator CLARK, of our State. Our State congress ioins the National Congress of Parents and Teachers in pressing for passage of a measure at this session of Congress which will provide Federal moneys to school construction and/or teachers' salaries. The great majority of our 2,500 local unit leaders express a concern for the need for Federal support to aid in financing educational programs in their communities. This is an appeal to the Congressmen from Pennsylvania to vote for a measure which will provide Federal support for construction and/or teachers' salaries.

Mrs. Horace H. Johnson. President, Pennsylvania Congress of Parents and Teachers.

New China Policy Needed

EXTENSION OF REMARKS

HON. DANIEL K. INOUYE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. INOUYE. Mr. Speaker, while the attention of the whole world is focused upon the events that recently transpired in Paris, and while world peace appears predominantly dependent upon securing mutual understanding between the West on one hand and Russia on the other, there lies on the western basin of the Pacific Ocean, a country seemingly ignored in the light of recent world political developments-a country which could well present a potential threat to peace and security just as much as Khrushchev has done in the past week.

I refer to Red China, a country of 600 million people. It definitely is not a sleeping giant. To the contrary, it is building up its militia and its economy, and it is my humble opinion that we cannot forever continue to pretend, policywise and objectively, that it does not exist.

On April 27, 1960, and prior to the scheduled summit conferences, Mr. George Chaplin, editor of the Honolulu Advertiser, addressed the Honolulu Chinese Chamber of Commerce on the subject of the need for a new policy in China, The broad but concise treatment of this subject by Mr. Chaplin is, I believe, most thought-provoking and under leave to extend my remarks, I am including it in the RECORD for the consideration of my colleagues.

The speech follows:

NEW CHINA POLICY NEEDED

(By George Chaplin, editor, the Advertiser) The China mainland today is in a great upheaval, a vast revolutionary process that

will strongly affect the future of the world. It holds great danger for us-and yet we have a policy that pretends that the 640 million people in Communist China simply don't exist. It is predicted, by the way, that those 640 million will become 1 billion-a thousand million-perhaps 20 years hence.

I am convinced that the next President of the United States-whether Republican or Democratic-will have to formulate the beginnings of a new China policy. The realities of the times-our own protection and the free world's-require it.

Mao Tse-tung once said that Red China's military force "is the chief component of the

political power of the state."

Red China today has the world's fourth largest air force-2,500 planes, of which at least 1,800 are jets. Red China has a regular army of 21/2 million men, with millions more in the reserves and in the militia.

Red China has a navy which is relatively small—but still the largest native naval force

in the Far East.

Overall, Red China's strength is described by one authority as "now probably stronger than the military establishments of all the non-Communist nations of the Far East, southeast Asia, and south Asia combined."

In the face of such strength can we seriously conclude with Russia any plan to reduce our conventional arms—without Communist China being an active party to such an agreement? Can we afford to cut our strength unless both major Communist powers in the world do the same?

On the nuclear front, there is the same

question, perhaps more vital.

Since October 1958, talks have been going on at Geneva between our country and Russia on a treaty to ban nuclear testing. an agreement is reached, the next objective will be the dismantling of the nuclear weapons themselves.

Assuming a foolproof system can be worked out between our Nation and Russia, we no longer are the exclusive members of the Atomic Club. France has formally applied for membership with two big bangs in the Sahara—and who can doubt that Communist China, which already has an atomic reactor, will soon be making her own largescale nuclear noises?

Does anyone really think we can leave Communist China out of nuclear agree-ments—and for a moment be safe?

It took sputnik to teach the American people that the Russians are capable of great technical achievement. Will we have to be taught the same kind of lesson by Communist China?

The winds of change are blowing around the world-often at gale force-and we ignore them at our risk.

How did Communist China get that way? What forces produced a tyrannical Red government in a land that has one-fourth of the world's people, three times the population of the Soviet Union, an area onethird larger than the continental United States and, seven times that of all the Russian satellites combined?

CHINA'S ROAD TO COMMUNISM

(By George Chaplin, editor, the Advertiser) How did the Communists come to control China? Let's take a brief look at history:

Until the Opium war of 1839, China lived in isolation, a world order of its own. Then came western penetration-economically, politically, culturally-and over decades China became, in effect, a tributary to the

In return for superior technology, Western Powers (mostly European) demanded and received special privileges. The result was to intensify existing problems-and fill the air with doubt, uncertainty and revolution.

Sun Yat-sen, who felt gradual self-government should succeed the monarchy, ranged the world during his 16 years in exile, seeking support for his cause.

The Tung Meng Hui, which supported Sun, planned a major uprising for December 11, 1911, but the Double Ten explosion in a Hankow arms plant in October set off the revolution prematurely.
Sun Yat-sen was in the Brown Palace

Hotel in Denver, Colorado, when he read of

this. Eleven weeks later he reached Shanghai, the Manchu dynasty fell and Sun was president of the new republic.

Unfortunately, he was more "an evange-list of freedom" than a political realist. "He could neither command troops, organize a bureaucracy, nor win the confidence of the Western Powers.

In August 1912, he tried to bolster his position by forming the liberal elements of Tung Meng Hul into the Kuomintang-but he was outmatched by his military opponent, Yuan Shih-kai, who forced him into exile in Japan.

Yuan set about to restore the empire, but revolts broke out, a few months later World War I erupted. Yuan was forced from office and China soon fell into 10 years of anarchy under the regional war lords (the tuchuns).

The Kuomintang stronghold was in Canton. There in 1921, Sun Yat-sen presented his great creed—the Three People's Principles—nationalism (Min Tsu), democracy (Min Chuan) and livelihood (Min Sheng). In 1924 he conferred leadership on a former artillery cadet, Chiang Kai-shek, and named him to head the new Whampoa military academy to train officers.

The year before he has sent Chiang to Moscow to study, but Chiang was not impressed. That same year-1923-Sun met with the Soviet diplomat Adolf Joffe, and the revolutionist Michael Borodin was invited from Moscow to Canton as political adviser of the Kuomintang. He was able to bring Chinese Communists into the party and install Russian military advisers on the staff of the Whampoa Academy."

The Russians were able to exploit the unrest in China and "the inequality of treatment which China continued to suffer within the family on nations."

This was 1923. Five years earlier, in the spring of 1918, only a few months after the Bolshevik revolution in Russia, Chinese intellectuals at Pelping University had formed a Marxist study club.

In 1920 Russia sent two agents to China to aid in organizing the Chinese Communist Movement. One group was set up in Peking, another in Shanghai and a Communist cell was set up in Paris by students including one named Chou En-lai.

The Communists tried from the beginning to use the Kuomintang-seeking open alliance at the top, infiltrating from the bot-Chiang recognized the danger and in the years after Sun's death battled the Reds vigorously.

Came September 1931, the Japanese invasion of Manchuria, the cutoff of the border province of Jehol in 1933, the invasion near Peiping in 1937, precipating the war that lasted until August 5, 1945. China had to battle for her life.

For Mao Tse-tung and his Communists the long crisis provided a real opportunity and every situation was used to advantage. Mao played it cleverly, pretended support for Chiang, as did the Russians. But the sharp differences were always there.

The United States sought to mediate between the Nationalists and the Communists without success. The Wedemeyer Report to President Truman criticized both the Communists and the Kuomintang-the Communists because they were bound to the Soviet Union and wanted China to be a Communist state, and the Kuomintang for "reactionary leadership repression and corrup-tion" which, he said, "had been responsible for a loss of popular faith in the govern-

In urging aid for China, Wedemeyer emphasized that "Chiang Kai-shek must concentrate upon political and economic reforms if communism were to be stopped." Chiang "hesitated to undertake the necessary reforms." He lost his soldiers, his rifles-and public support.

In October 1948, the Nationalist defenders of Mukden went over to the Communists. January 1949, Tientsin fell. Peiping without a fight the same month, Shanghai in May, Canton in October without a fight.

Chiang began his rule-by-exile, on Formosa

CHINA'S COSTLY CLIMB TO POWER

(By George Chaplin, editor, the Advertiser)

A decade ago, on October 1, 1949, a quartermillion people packed the city square of Peiping to see the new Communist government take over.

The Reds promised full freedom-freedom to think, to speak, to publish, to assemble, to worship, to demonstrate. These were false promises, never allowed to become realities.

On that day not yet 11 years ago, Communist control had been extended to over one-fifth of the world's surface and to nearly one-third of the world's people.

Mainland China was practically in ruins from the long years of civil war and of invasion. Farm production was poor, famine was widespread, there was little industry. most of the roads and railways were beyond

The Communists set about to build China into a major industrial power-as quickly as possible, without regard to human cost.

Last year, industrial output was more than 10 times the 1949 figure. Tillman Durdin, southeast Asia correspondent of the New York Times, writing recently in the Atlantic, said Red China's scheduled output of industrial-grade steel last year was 12 million tons, 13 times the peak output of 1943.

"Today the country mines four to five times more coal annually than during the best pre-Communist year and claims to have surpassed the output of the United States. The regime maintains that Shanghai alone now turns out more textiles than all of the United Kingdom.

"Communist Chinese factories make industrial chemicals, locomotives, power generators, machine tools, automobiles, steel plants, airplanes, ships, electronic equipment-a wide range of the products of an industrialized economy."

Factories, mines, highways, airports, flood control systems—these all cost tremendous sums. And yet "during this last 10-year period, Communist China has had less than the equivalent of 500 million American dollars in foreign credit to assist in its economic upbuilding. The remainder of the capital goods used in its economic program has been paid for out of exports

In other words, the vast development of China has mostly been built out of human sweat and human endurance. The Red leaders converted prodigious human effort into capital. The emphasis on agriculture has been more to pay for industry than to improve living standards.

As a result, consumer goods are short, food and clothing are sharply rationed, and many go hungry. One workman, asked by a French visitor whether he wanted better housing or more leisure, replied: "We would so much like a little more pork."

The drive to extract the most from the human resources led to the communes 2 years ago, the compacting of 750,000 collective farms into 26,000 heavily regimented rural

Peking pushed too hard, too fast-there widespread complaint-mostly about breaking up families-and the government eased up a bit. But in production it still came out ahead.

It was the old Leninist technique of "two steps forward and one step back." ple are squeezed beyond their limit, then the pressure is reduced-but just a bit.

There obviously is much discontent in Red China, but life is so closely regulated by the Government it has little chance of being translated into action.

One of the secrets of the Reds has been the elimination of privacy. Today, reports an Atlantic article by Harriet C. Mills, a teacher of Chinese at Columbia University, a longtime China resident and a prisoner 1951-55 of the Communists, "every office, factory, shop, school, cooperative, mune, military or residential unit in China is divided into ostensibly voluntary small study groups of about 6 to 12 persons (hsueh-hsi)."

Under this system—this machine—of thought control "there is tremendous pressure both to fall in line and to want to fall

For the last 10 years "the Chinese Communists have been conducting the greatest campaign in human history to reshape the minds of men."

Mao Tse-tung said: "Thought reform is a protracted, gigantic and complex task. As the struggle will continue to experience ups and downs, we shall have both tense and slack moments during our work and shall have to proceed in a zigzag."

Only once did Peiping permit open criticism of the regime—the Hundred Flowers period of 1 month, from May 8 to June 8. 3 years ago. The criticism came mostly from intellectuals-and the Government. once it saw who the complainants were, quickly cracked down. Since then, no public criticism.

The fact is that despite the official toughness there is apparently a strong national pride in physical achievement. For China is on the way to becoming, in perhaps another 20 years, the third strongest industrial power in the world, next only to us and Russia.

Cyrus Sulzberger, chief foreign correspondent of the New York Times, wrote in a recent book: "The incredibly enormous state of mainland China will almost surely be the greatest superstate existent when the 21st century rolls around." That 21st century is just 40 years away.

To combat this, we have used a negative policy, one that seems to pretend that Red rule of China is a nightmare which will pass with the dawn, some future dawn.

If that policy were working, if Red China were not steadily growing in strength, and thus in danger to us, perhaps it could be defended. But it is not effective.

OUR CHINA POLICY MYTH

(By George Chaplin, editor, the Advertiser)

Our Asia policy is based on our China policy—and that China policy in turn has been constructed around a befuddling myth-that Chiang Kai-shek and his troops would return from Taiwan-"the Terraced Bay"-to the mainland, there to be greeted and aided by a mass revolt against the Communist government.

Chiang, now past 70, still has his generals and admirals-almost 600 on the active list, and another 350 retired but available.

He has a well-trained army-although & third of it is composed of Formosans who while living better than ever under U.S. financed Nationalist rule, have no deep ties with the China mainland and no zeal for battling over it. I might add that had the land reform program in Taiwan been applied by Chiang in China proper, he might have saved his nation and himself.

Now Chiang is left to his aging dreams and his final hopes. He commands, without benefit of public election, a semi-Socialist state which owns its major industries and spends 75 percent of its income on defense.

Chiang would like to see the now-andthen exchange of shells over Quemoy and Matsu develop into large-scale battle. are determined to prevent this -- and yet we

still play a Dulles-type brinkmanship as long as we permit those just offshore islands to symbolize our stand against Red China.

I would favor holding Formosa at all costs, including all-out war. But not Quemoy and Matsu. The problem is that having got ourselves stuck politically on a couple of "nearly indefauthle". of "nearly indefensible" and strategically dubious islands, how do we get unstuck in a way that is not obviously yielding to Red pressure? That's one of a long list of dilemmas the next President will inherit.

Even tougher questions are whether we should recognize Red China and whether the United Nations should admit her to membership. Our Government's policy is no, on both counts-although more and more officials privately concede that both U.S. rec-Ognition and U.N. admission are inevitable. The nub is when and under what circumstances.

Peiping today, although ostracized by us, has made effective contacts especially in the Afro-Asian nations and the Middle East. There she has diplomatic relations with Cambodia, Indonesia, Burma, India, Ceylon, Nepal, Afghanistan, Yemen, the United Arab Republic, Iraq. Morocco, and the Sudan.

She has lost some ground over the brutality in Tibet and the Indian border clashes, but wishful thinking should not inflate our

estimates of how much.

In foreign trade, most of Communist China's volume is with Russia and Eastern Europe-but she also deals with more than non-Communist countries or areas, largely Asian and African, to whom she sells textiles and other goods, both consumer and capital items. Japan and other industrial nations are beginning to feel this competi-

Between 1954 and 1957," according to an Atlantic article by Doak Barnett, State Department aid now with the Ford Foundation, "Communist China's trade with the underdeveloped nations of the Far East and southeast Asia rose by more than three-Quarters, at a rate over three times as fast as the increase of Japanese trade with the

Peiping is also active in foreign aid-\$750 million in grants and \$150 million in loans since 1953 to North Korea, North Vietnam, and Outer Mongolia, \$30 million to Hungary and now grants or loans to such countries as Ceylon, Cambodia, Burma, Indonesia, Egypt, and Nepal (whose King visited Hawaii some days ago).

Red China's major export, however, is trouble—the hope of stirring revolution and expanding the scope and influence of com-

munism.

This inevitably brings up the question of the 12 to 13 million oversea Chinese—10 million of them in southeast Asia—and the com-Petition between Peiping and Taipei for tehir allegiance.

It is argued by many that U.S. recognition or U.N. admission of Red China would en-courage the oversea Chinese—the hun-

chiao to become a fifth column for Pelping. The oversea Chinese are talented and skilled people for the most part, many with large commercial holdings. They know the facts of life. They know that Chiang holds no future for them, only futility, and they are beginning to learn, too, that the Communist government is more interested in manipulating and exploiting them than in protecting them.

I agree with Robert Elegant, Newsweek's Hong Kong bureau chief and an able student of the Orient, that "the immediate aim of American policy should be to neutralize (the overseas Chinese) politically so that they will no longer serve as a channel for Communist conquest."

And that "our ultimate aim must be to encourage assimilation (in the lands where they are living) if possible and accommodation where assimilation is impossible."

This would be a long, complicated, and tedious process—encouraging the oversea Chinese to give their political loyalty to their local governments and encouraging their local governments to accept it—but it is important and needed and we should get on with it.

At the same time, we should continue to build the free world's physical strength in southeast Asia to assure more security against the Red Chinese.

Any changes in our China policy should be to strengthen the mutual defense of free nations in the path of Communist China.

TIME FOR A CHANGE ON CHINA

(By George Chaplin, editor, the Advertiser)

Our lack of contact and communications with Peiping seems to me to be highly dangerous-for it is more important to keep a close eye on an enemy than on a friend,

We have an open-door policy with nations that are friendly to us—and, in the case of Russia, with one that is highly unfriendly. Churchill once said Russia under Stalin was a riddle wrapped in a mystery inside an enigma. So is Red China under Mao.

We've learned a great deal about Russia by direct contact. When it comes to Red China, we try to observe what's going on by looking through a small crack in the bamboo fence at Hong Kong or depending on reports from other nations.

We should seek unofficial contact with Peiping on various levels-through the exchange of newsmen, students and scholars, economists, sociologists and anthropologists, technicians, and tourists.

Last November a report prepared for the U.S. Senate Committee on Foreign Relations urged "proposals for exchange of scholars and commercial representatives" be our country and Communist China. between

"The United States dealt with Russia on these levels years before we recognized the Stalin regime."

"The Untied States has validated passports for 30 American newsmen to go to Red China, but Peiping-which invited them in the first place-now refuses visas, insisting on reciprocity, that we permit Red Chinese newsmen to come to America.

This would require a-waiver of our lawswhich the State Department some months ago said it was prepared to recommend to the Attorney General. Thus far, Peiping has not publicly reacted to that statement.

We ought to continue our efforts-for we have nothing to hide from Pelping's newsmen; Peiping has much to hide from ours. Isolation operates to Peiping's advantage, to our disadvantage.

Our ignorance of day-in-day-out operations in Red China is not adequately relieved by information we get from foreign legations in Peking, or from mainland China's technical journals or from foreign newsmen. We need our own observers at firsthand.

With unofficial contacts, U.S. recognition of Red China would still be a long time coming. We certainly should not rush into it. At the same time, we should disabuse ourselves of the notion that recognition means approval. We recognize the Governments of Communist Tito in Yugoslavia and Fascist Franco in Spain-and of course, Red Russia.

In not recognizing Red China, we have also persuaded the United Nations not to admit her. And yet, interestingly, this is what John Foster Dulles wrote in his book War or Peace" in 1950, reissued in 1957 after the Korean war:

"All nations should be members (of the UN) without attempting to appraise closely those which are good and those which are bad. Already that distinction is obliterated by the present membership of the United

"Some of the present member nations, and others that might become members, have governments that are not representative of the people. But, if in fact they are governments—that is, if they govern—then they have a power which shuold be represented in any organization that purports to mirror world reality.

"If the Government of China in fact proves its ability to govern China without serious domestic resistance," wrote Dulles, "then it, too, should be admitted to the United Nations. However, a regime that claims to have become the government of a country though civil war should not be recognized until it has been tested over a reasonable period of time."

Dulles, prior to confirmation as Secretary of State, ran into some resistance on this view. According to Cyrus Sulzberger, chief foreign correspondent of the New York Times, "he gave private assurances" that he to forgo this position and he was willing accepted Walter Robertson as Assistant Secretary in charge of Far Eastern Affairs.

As recently as 3 years ago, Robertson was saying that "Mao has no more real influence than the first taxi driver who goes by out-

Secretary Dulles has passed on and Robertson fortunately has left office. Secretary Herter may have different views on what the best interest of the United States and the free world demands in the way of policy.

Our insistence that Nationalist China be seated as one of the five permanent nations on the Security Council was born of our affection for the people of China-and without sufficient awareness of the realities. for we overestimated Chiang's strength and underestimated Mao's.

There are many, especially in Europe and among the Afro-Asians, who now favor a two-China approach. They would keep Nationalist China in the Security Council and admit Red China to the General Assemblywhere its representatives would have to stand up in the chamber of nations and defend their position themselves, rather than having Russia as agent and spokesman.

Neither Taipel nor Peiping likes the two-China approach. Some feel that Red China would not accept U.N. admission on such terms and also would not accept U.S. recognition—on the premise that psychologically she can better promote her hate America campaign from her present posture of iso-

There are no easy answers on our China policy. Our present one is negative. We need one that is positive, one that will not reduce our strength or our allies' but will increase it.

Such a policy would have to be evolved slowly and carefully. It is time to get started—and I believe we will see some moves in this direction in the next administration.

Education for Survival

EXTENSION OF REMARKS OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. LEVERING. Mr. Speaker, as we debate the matter of further Federal aid to education, which by the way we have had in many forms since the founding of our Government, it seems to me the question is not whether we are going to continue having schools-for of course we will. It is not a question of whether we are going to continue to support our schools by taxation-of course we will continue to do this. The real question, it seems to me, is whether we will continue to support our schools primarily from taxes on real estate or whether we will help support them from taxes on income. In Ohio, 68.4 percent of the school tax dollar is obtained from the local school districts and of this 90 percent comes from taxes on real property.

Mr. Speaker, under leave to extend my remarks in the Record, I include the following excerpts from remarks by the late Senator Robert A. Taft of my State of Ohio on March 23, 1948; in support of Federal aid to education:

WHY MR. TAFT CHANGED HIS MIND

Four years ago I opposed the bill on this subject; but in the course of that debate it became so apparent, upon further study, that that was not the fault, necessarily, of the States where they lived, but rather of the financial abilities of the States that I could see no way to meet the condition which now exists regarding illiteracy in the United States and lack of education in the United States without some Federal assistance, particularly for those States which today are considerably below the average of wealth in the United States.

TO KEEP AMERICA FREE

I do not think I can exaggerate the necessity of education. Primary education lies at the basis of all forms of republican government. A government depending on the making of decisions by the people and depending on their intelligence can exist only if the people have some ability to understand the problems of government which are presented to them. Unless there is a satisfactory educational basis, there cannot possibly be hope for success in any democratic form of government where the people are expected to rule and to decide the questions which are placed before them.

THE FEDERAL GOVERNMENT MUST HELP

In matters affecting the necessities of life—and I should like to confine it so far as possible to the necessities of life, namely, to relief, to education, to health, and to housing—I do not believe the Federal Government can say it has no interest, and say to the people, "Go your way and do the best you can." I do not believe we should do that. Because of the way wealth is distributed in the United States I think we have a responsibility to see if we can eliminate hardship, poverty, and inequality of opportunity, to the best of our ability. I do not believe we are able to do it without a Federal aid system.

STRENGTHEN ALL STATES

I do not believe that even the wealthier States are able today to do all the things the people want them to do. They are not able to do it simply because the power of the States to levy taxes is very limited and unsatisfactory. We may approach the prob-lem in some other way; but I do not know of any State aid program which has undertaken to exclude any State from some participation in the program. I believe that the general principle holds true, that if we are to do it at all, we must include all the States, including the wealthier ones, My theory is that if we do not undertake a Federal aid program, we shall have a national program forced upon us. I think it would be far better to strengthen the Statesthe strong States as well as the weak States.

NO OTHER WAY

It is popular to provide for public works. Public works are nice things; we can see them. But when it comes down to the basic necessities of life and the basic elements of human welfare and human progress, there is nothing more important than education. It does not have the glamour that

other things have, but it seems to me we must go forward in the field of education for our people and I know of no way of going forward in that field to any substantial degree without providing some Federal financial assistance.

SAFE FROM FEDERAL CONTROL

In my opinion, those of us who are interested in seeing that the power of the Federal Government does not increase are on sound ground in supporting the granting of Federal aid to enable the States to do what is necessary to resist Federal action, and then to insist that there be no interference with the power of the States to require their governments to administer their own affairs.

A LONG HISTORY OF U.S. EDUCATION SUPPORT

I should like to point out that Federal aid to education is not new in principle, that the Federal Government has always shown an intense interest in education throughout the United States. The Land Grant College Act provided an endowment to support at least one agricultural and mechanical college in every State. Furthermore, we have made appropriations for agricultural experiment stations. We have extended Federal aid for programs of cooperation with the State in extension work in agriculture and economics, and also in agricultural and industrial courses in secondary schools. Of course, going back to the beginning, it will be remembered that practically all public lands, I think, were distributed on condition that one section, sometimes two sections, in every township should be set aside to be sold and used for the purpose of local education. So, the general interest of the Federal Government in education cannot be questioned from a historical standpoint.

IT CAN BE DONE

But I believe very strongly indeed that in this field and in health and other fields dealing directly with human welfare, we must work out a sound system of improvement. I think that the best form we have today is the form of Federal aid to the States, leaving complete control of the administration of the funds and the administration of the programs, for which they must have the primary responsibility, in the hands of the local communities.

A FUNDAMENTAL AMERICAN PRINCIPLE

I think we have a tremendous obligation to provide equality of opportunity to the children of the United States. When the Declaration of Independence said that all men are created equal, it perhaps made an extreme statement; but I have always felt that what was meant was that all men in the United States are entitled to equality of opportunity. No child can have equality of op-portunity, in my opinion, unless to start with, he has a basic minimum education. There are many children who may have the mental capacity or the mental brilliance to rise above that handicap; there are many who will educate themselves; but I think they comprise a very small proportion of the total. The ordinary child who receives no education is, in effect, condemned to a life of poverty, a life on the basis of a low standard of living, a life of little interest, and a life which is of little value to the people of the United States.

I feel very strongly that we in this country have an opportunity which no other country has ever had, because of our tremendous productive ability, to see to it that equality of opportunity is afforded to all children born in the United States, or at least to aim in that direction and to achieve that end as closely as possible by administrative methods.

PEOPLE ON THE MOVE

Today people move all over the United States, so there is a national interest in the basic education which they have received.

DEMANDS OF THE PEOPLE

The people have become more and more interested in the action of States and localities in various fields. The demands for State action have constantly increased, until today I believe that even the wealthier States are not able to meet the demands the people themselves make upon them in the particular fields which are their primary obligation.

Summit Conference

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. DERWINSKI. Mr. Speaker, grass-roots public opinion, reflecting as it does the true sentiments of Americans in relation to the recent Soviet-torpedoed summit conference, is clearly shown in community newspapers throughout the country. I submit for the RECORD an editorial from the Orland Park Herald, Tuesday, May 19, which, I believe, is worthy of attention:

It is a tossup as to which burns us most—the United Nations or the Moscow mobsters led by Nikita Khrushchev.

The United Nations has never been of any use in promoting peace and curbing aggression or war and we doubt that it ever will accomplish anything along the lines for which it is intended.

The American people were smart enough to stay out of the League of Nations following World War I. That was another body that falled to accomplish anything. And probably the greatest disappointment to its members was the fact that Uncle Sam was not there to pick up the check.

It is possible that had radio and television been available during World War I the League of Nation propagandists might have won us over. Americans were more independent minded then than now but we were a gullible lot too. Just look at the vote Wilson got when he ran for his second term on the slogan—"He Kept Us Out of War."

We didn't have a chance, however, when the United Nations was hatched. Years of brainwashing by F.D.R. and his New Dealers left us easy prey for the machinations of the one-worlders, do-gooders and pacifistic peace-at-any-price star gazers and we joined

That was a sorry day. So far the only purpose served by the U.N. has been to provide the commies with a distributing center for their propaganda and cover for their spies and a place for incompetents, uplifters and phonies to find jobs at sizable pay. The American taxpayers are footing most of the bills and if we got out the U.N. probably would collapse because the race of other members to dodge the check.

The U.N. has been bumbling along for more than a decade now, sometimes scolding, sometimes even shaking a finger at people and nations that flout its edicts and no one pays any attention. Nine observers sent to the Middle East as observers for the U.N. were killed, several of them having been deliberately murdered. And the U.N. never even said:

"Oh my goodness, fellahs, you shouldn't have done that."

It is reported that the Russians have taken over the U.N. news service so handouts and news releases made available through this service carry Red propaganda to all parts of the world. There are many papers that use

this U.N. news service. We have been re-ceiving a column in the mail-free of charge-which stems from the U.N. news service but we throw it away.

The Russian chief, Nikita Khrushchev, is constantly rattling missiles and telling the rest of the world what it must do. If any-thing should happen to him and the remainder of the Red heirarchy we hope it will not be trivial.

It is difficult for a family newspaper to refer to Khrushchev in apt phrase but we think that the creator of the comic strip Moon Mullins has been doing very well. In case you haven't been reading the strip recently it is now showing a sequence in which men from the State Department have called on Kayo Mullins in effort to persuade the lad to change the name of his dog, a bad mannered, oversized pooch.

The name-why Nikita, of course. Subtle,

these cartoonists.

Sentry in the Sky

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. LINDSAY. Mr. Speaker, this morning's New York Times carries an editorial entitled "Sentry in the Sky." This is a fine comment on the launching in orbit of Midas II and I recommend it to my colleagues:

SENTRY IN THE SKY

The launching in orbit of Midas II as part of the Air Force program to devise space sentries that would give a speedy warning of a surprise missile attack has definitely Opened a new era in the building of a powerful global defense system for ourselves and the rest of the free world. It promises for the near future-not more than 2 to 3 years hence and possibly sooner—to provide the free world with an early and effective warning system that would make it extremely difficult for a would-be aggressor to launch a surprise attack with intercontinental ballistic missiles.

The 3.000-pound instrument package of Midas II, the heaviest so far of any U.S. satellite, functions by detecting with its infrared sensors (namely, detectors of heat waves—the heat given off by a missile's engine exhausts. In this manner Midas will track a rising rocket for as long as its missile engine burns, or about 5 minutes. This information, relayed to ground stations, would give the missile's approximate course. Radar screens would then refine the information for a quick and accurate fix of the missile's course, thus greatly increasing the chances of accurate aiming by antimissile missiles.

The detection of the heat radiation from the exhaust flames of a ballistic missile as soon as it was launched would provide a warning time of approximately half an hour for a long-range ballistic missile with a range of 6,400 miles, instead of the 15-minute alert warning of possible attack that is now the basis of U.S. defenses. While half an hour may seem all too short a time in which to prepare to ward off a large-scale longrange missile attack, it nevertheless represents a doubling of the warning time.

Rowever, the added 15 minutes is only a small part of the story. The Midas is only one of several projects, some of them recently accelerated, in our efforts to seek protection. tection against a surprise missile attack, the greatest danger facing the free world. In announcing the Midas, information was also given out on a sister project, a space sentry named the Samos, which would carry longrange wide-angle cameras. The Samos, when perfected, will be a veritable "eye in the sky." More than any other instrument now in operation, it would make such efforts as U-2 information-gathering flights over the Soviet Union wholly obsolete.

The promise held out by the Samos is veritably breathtaking. Since the launching of a large-scale missile attack would necessarily take weeks of intensive preparation. it would be indeed extremely difficult to hide such preparations from the all-seeing "eye-in-space." It would therefore give us, and the free world, early warning not in terms of half an hour, but would reveal to us weeks in advance a potential enemy's aggressive plans. This in itself promises greatly to reduce the element of surprise, and thus to deprive a would-be aggressor of one of his most potent advantages

Unlike the U-2, which can be shot down, the Samos will be practically invulnerable against an enemy's effort to prevent it from doing its job. It would be practically impossible to send up a satellite to shoot it down, for an enemy would not be able to determine its position when orbiting over his territory. In the first place, the launching of such a satellite need not be made public, so that its very existence would not be known. Secondly, the taking of pictures is a silent operation, undetectable from the Thirdly, the sending down of its information electronically will not take place until commanded to do so when it is U.S. territory, so that its signals could not be interfered with. One such "eye-in-thesky" could thus do the job of hundreds of manned U-2's in complete safety.

All in all, the launching of Midas II marks veritable revolution in the building of the defenses of the free world. It, and Samos now in the making, are two of our newest shields to protect us against surprise attack. They thus serve as two of the most powerful weapons for the preservation of peace.

There Is Still an Urgent Need-And There Is Still Time To Enact a Depressed Areas Bill

EXTENSION OF REMARKS

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. STRATTON. Mr. Speaker, as one of the coauthors of the so-called depressed areas bill, S. 722, one who fought hard to get this bill adopted by both Houses of Congress, and as one who knows something of the long, hard job it was just to get this piece of legislation to the floor, I was as distressed as I know most of us were by the President's heartless veto of this urgently needed

I appealed personally to the White House to get the President to sign the bill. I made a personal visit to the President's counsel to present the facts about the need for this legislation in my district, and the wide bipartisan support which it has in these communities which I represent which have been so hard hit economically. In spite of these efforts, the President, as we all know, vetoed the

bill. And just the other day the other body failed to override the vetoalthough, Mr. Speaker, I am frank to say I was most heartened to see that both of the distinguished Senators from my State of New York who visited my home city last January to see our plight there in Schenectady at firsthand voted to override the veto.

But what do we do now, Mr. Speaker? Where do we go from here? I know the tremendous job we faced in just getting S. 722 to the floor for a vote. We had to use a rarely employed parliamentary device to do it—Calendar Wednesday—a device that cannot be used again this year. It took us over a year just to accomplish that operation. I wonder how we can hope to do the same thing all over again.

Nevertheless, Mr. Speaker, several Members on the other side of the political aisle, including the gentleman from New Jersey [Mr. WIDNALL] and my very close friend the gentleman from Pennsylvania Mr. [VAN ZANDT] with whom I had the honor to serve in the southwest Pacific in World War II, have introduced legislation which they tell us has the support of the White House and would be acceptable to the President as a compromise bill. While this legislation does not in my judgment go far enough, because it eliminates from any consideration the great industrial city of Schenectady which has lost some 18,000 factory jobs in the past 6 or 7 years, I want to make it clear that I am prepared to support these bills. At least they will make a start in the right direction. At least they will provide some measure of relief for two other communities hard hit by unemployment in my district. Amsterdam, and Gloversvill-Johnstown.

And so, Mr. Speaker, I want to urge all Members on my side of the aisle to put aside partisan considerations and join in supporting these bills. It is much more important that we have a bill than a political issue, because the people in my area are hurt and they are hurt hard. and they cannot keep on waiting much longer. Let us get together and adopt these compromise bills. Let us all join hands, and perhaps, with the support of the leaders on both sides, if we can get that support, we can pass them by acclamation in a single afternoon.

Under leave to extend my remarks, Mr. Speaker, I desire to include at this point a thoughtful editorial that appeared recently in the Amsterdam Evening Recorder in my district, urging us in the Congress to support these compromise bills. In the wise words of the editorial, which I hope all of my colleagues will take the time to read, "Half a loaf is always better than none." The editorial follows:

DEPRESSED AREA PROBLEM

Those Members of Congress who were unsuccessful in obtaining President Eisenhower's signature on the bill which would have provided economic assistance for depressed areas now have an opportunity to demonstrate their sincerity.

To replace the \$251 million measure which was vetoed because of what was termed "excessive spending," the administration has submitted a substitute bill calling for \$180 million. While the revised version might not be nearly as vote-attractive in an election year, the administration maintains it would meet existing needs. Surely those in depressed areas are more concerned with some form of assistance than with political implications.

The original measure would have provided aid for areas which were not even aware they had been designated as "distressed." Some of them openly resented their inclusion in

this category.

The substitute legislation is based on proven conditions. It would provide funds for rejuvenation of slack industries in regions where economic difficulties exist and the people want to be helped.

If those who supported the original relief bill are as concerned with the public welfare as they would have us believe, they can prove it by backing the down-to-earth measure

offered by the administration.

The question of aid to depressed areas has been discussed at great length and the need in various localities has been established. Since there is no reason to resume the timeconsuming debate, there is still plenty of time for legislative action before Congress adjourns for the summer.

Due to industrial shifts and other economic factors there are parts of the Nation, including much of our own Mohawk Valley, which need help now. There should be no delay in providing such assistance. Half a

loaf is always better than none.

Interstate Commerce Act

EXTENSION OF REMARKS

OF HON. DANIEL D. ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. ROSTENKOWSKI. Mr. Speaker, I would like to introduce two bills-one to repeal section 203(b)(6) of the Interstate Commerce Act, as amended, relating to the so-called motor-carrier agricultural commodities exemption, and the second to amend the Interstate Commerce Act so as to extend to the railroads a conditional exemption from economic regulation comparable to that provided for motor carriers when engaged in the transportation of ordinary livestock, fish or agricultural commodities.

It will be seen immediately that these bills embody objectives that directly clash with one another. They are intended to do so. And I offer them not to confuse my colleagues but to give you a clear choice as to which path to choose in eliminating a grave inequality of treatment as between different modes of transportation which exists in the present law.

These bills are being introduced because it is believed that this exemption from regulation has been extended far beyond its original and only justifiable purpose, which was to help the farmer by exempting from economic regulation the initial movement of his products from the farm to first markets.

Because of the steady broadening of this exemption to include even factoryprocessed products moving in commercial channels, regulated carriers such as the railroads today find themselves se-

verely handicapped in competing for traffic in agricultural commodities. Their rates are rigidly controlled and are required to be openly published, while the rates of exempt motor carrier haulers are not subject to any control and need not be made public. The regulated carriers thus have no clear idea of the kind of competition they are up against—though the exempt hauler knows precisely. As a consequence, large and ever-growing volumes of important traffic have been diverted to exempt truckers. And the impact on the Nation's basic carrier-the railroadsgrew more and more serious as the courts expanded still further the scope of this exemption.

Proposals to remedy this situation have been advanced by a number of public interests, including the Interstate Commerce Commission and various shipper groups. These suggestions were discussed during the course of hearings conducted in 1958 by the Subcommittee on Transportation and Communications of the House Committee on Interstate and Foreign Commerce. As a result, the Transportation Act of 1958 included a provision which amended section 203(b) (6) to halt further expansion of the exemption and to return to economic regulation the transportation of frozen fruits and vegetables and imported agricultural commodities.

This was constructive action. But it was only one short step forward. While the 1958 amendment presumably has halted further significant expansion of the agricultural commodities exemption list, the widespread diversion of traffic in products already exempted from regulated carriers to exempt haulers con-

There are two ways to resolve this intolerable, unequal competition. One is to repeal the exemption outright and allow the traffic by all carriers to be regulated equally. The other is to extend to the railroads the same kind of exemption from economic regulation now granted motor carriers engaged in the transportation of ordinary livestock, fish, or agricultural commodities. I offer separate bills to accomplish each of these objectives

I urge that the House of Representatives give these proposals every consideration in the interest of establishing conditions of fairplay and equal opportunity for all transport competitors.

Abraham Lincoln and Stephen Douglas

SPEECH

OF

HON. PETER F. MACK, JR.

OF TITINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. MACK. Mr. Speaker, all of us in Illinois, as throughout the Nation, Democrat and Republican alike, revere the memory of Abraham Lincoln,

It is fitting, therefore, that, although a Democrat, I feel privileged to join in

this tribute to Lincoln on the occasion of the 100th anniversary of his nomination by the Republican Party of 1860 as its candidate for President of the United States.

However, I cannot let this occasion pass without paying tribute to another great American, another stalwart son of Illinois, that great leader of the Democratic Party, Stephen Douglas.

If, as many historians say, Lincoln's debates with Douglas gained him national stature and led to the presidential nomination, it was because Douglas already had risen to preeminence in the political life of this country.

It was the mark of the man that Douglas, once Lincoln became Chief Executive amid the flames of civil war, forsook partisanship and loyally supported his Commander in Chief.

An interesting account of this final episode in the stirring life of Illinois' "Little Giant" is given in the following account prepared at my request by Mr. John T. Rodgers, editorial specialist with the history and government division of the Legislative Reference Service of the Library of Congress:

ABRAHAM LINCOLN: STEPHEN A. DOUGLAS

The great political battle, formally opened by the ominous "House divided" speech at Springfield, Ill., on June 16, 1858, was at last decided-insofar as it could lawfully be decided-by the returns as they filtered through from the North on the evening of November 6, 1860.

And the defeated-but still indubitably great opponent of that most fateful political field? I cannot, I feel, do better than to quote from Miss Tarbell's "Life of Lincoln," which, after three score and 5 years, still casts an indefinable charm. Speaking of the inaugural ceremonies on that foreboding March 4, 1861, Miss Tarbell writes:

"A few moments' delay, and the movement from the Senate toward the east front began, the Justices of the Supreme Court, in cap and gown, heading the procession. As soon as the large company was seated on the platform erected on the east portico of the Capitol, Mr. Lincoln arose and advanced to the front, where he was introduced by his friend, Senator Baker, of Oregon. He carried a cane and a little roll-the manuscript of his inaugural address. There was a moment's pause after the introduction, as he vainly looked for a spot where he might place his high silk hat. Stephen A. Douglas, the political antagonist of his whole public life, the man who had pressed his hardest in the campaign of 1860, was seated just behind him. Douglas stepped forward quickly, and took the hat which Mr. Lincoln held helplessly in his hand. 'If I can't be President,' he whispered smilingly to Mrs. Brown, a cousin of Mrs. Lincoln and a member of the President's party, 'I at least can hold his hat.'
"'Douglas' conduct cannot be overpraised,'

wrote the 'Public Man' in his 'Diary.' him for a moment in the morning, when he told me that he meant to put himself as prominently forward in the ceremonies as he properly could, and to leave no doubt on any one's mind of his determination to stand by the new administration in the performance of its first great duty to maintain the Union,"

"Immediately after the firing on Fort Sumter, Douglas accompanied George Ashmun to the White House, at the latter's sug-gestion, to assure the President of his support. He was cordially received and heard the President read a draft of the proclamation calling for 75,000 volunteers to suppress rebellion. His only criticism was: 'I would make it 200,000.' Otherwise their accord was complete. In the columns of the newspapers next morning Democrats read the President's proclamation and a dispatch (written by Douglas) announcing the determination of Senator Douglas fully to sustain the President in the exercise of all his constitutional functions to preserve the Union. From this time on Douglas was in frequent conference with the President. It was on Lincoln's advice that he left the Capital to rouse the people of the North-West to the seriousness of the crisis. He spoke twice on the way, both times with obvious emotion, deprecating secession and pleading for the support of the Government at Washington. On April 25, he made a remarkable speech to his own people in the capitol at Springfield. Fifty years later, men who had been his political opponents could not speak of it without emotion. 'I do not it is possible,' wrote Horace White, for a human being to produce a more prodigious effect with spoken words' (Herndon-Weik, Lincoln II, 126-27). His great sonorous voice reverberated through through the chamber until it seemed to shake the building, stirring men and women to a frenzy of excitement. In a few weeks that great voice was still. Stricken soon after with typhoid fever, he battled resolutely as ever with this last foe, but succumbed on June 3, 1861, his last words a message to his two boys bidding them to obey the laws and sup-Port the Constitution."

Thus did not the least of the sons of nlinois pass over the Great Divide, his last thought—his very last breadth—in support of the Union he so dearly and zealously loved.

Some Wise Thoughts on Voting

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial which appeared in the Grants Pass (Oreg.) Courier, of May 18, 1960. Editor Paschal Wilson commented on the value of the individual vote which Oregonians then were to cast 2 days hence in the Oregon primary. That primary is ended but the wisdom of the editorial is still worth sharing with my colleagues.

Editor Wilson noted:

It would be well to remember * * * that we are in the most severe time of testing in our history and not even the smallest community, let alone any State of the United States, can escape the pressure from without we are feeling within our form of government.

PRIDAY, A DAY FOR SERIOUS THOUGHT

Another day and then ballot-casting time. Who to vote for in the primary? Not much deciding on the Republican side. Quite a lot in the Democratic lineup.

It is essential, if the county has the kind of government it needs, that the voter—the men and women who pack the big stick at least at election time—vote for the best qualified candidate. It doesn't follow that just because a candidate is already holding office he should be automatically returned. Neither does that fact mitigate against his remaining in office.

But if an officeholder's record, his personal attitude toward the public, his efficiency and courtesy in dealing with the public are noticeably lacking, then it is the responsibility of the voter to find another candidate that more nearly measures up.

The county, the city, the State government must have in the several offices in those setups, men and/or women who have love for their residential community, for the people who hire them to do a job; the candidate is normally receptive to suggestions, courteous and extremely handshaky but too often when he or she is placed in the office they seek, their attitude undergoes a change and they sometimes feel they are overlords and the people the underlings when, in fact, it is the other way around. The officeholder is a servant of the people and should with humility and appreciation of the mandate of the people conduct the office assigned by the majority or plurality of votes, as the case may be. There's a vast difference between dignity in office and servility, however, but they go, in a manner of speaking, hand in hand.

So, it would be well to remember in Friday's primary voting that we are in the most severe time of testing in our history and not even the smallest community, let alone any State of the United States, can escape the pressure from without we are feeling within our form of government.

We want loyal, steadfast, dependable, honest, courteous men and women, able to handle not only the job they seek of the voter but undeniably and wholeheartedly inclined to the kind of governmental arrangement our Founding Fathers set up for us and which has weathered many a test to still maintain the standards we pride in a free nation.

Basically, the right of the people to select whom they will have to serve them is as much a part of the life of the respective communities as their religions, and the mandate of the people should be a sacred trust in the eyes of those they favor. But first and foremost is the responsibility of the people to choose rightly.

Farm Policy Comment

EXTENSION OF REMARKS

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. HAGEN. Mr. Speaker, I first invite the attention of the Members to an article by Charles B. Shuman, president of the American Farm Bureau Federation, entitled "The Quest for the Holy Grail":

THE QUEST FOR THE HOLY GRAIL (By Charles B. Shuman)

According to legend, many knights of old sacrificed their fortunes and their lives in a gallant but fruitless search for the Holy Grail. Clad in shining armor, the Crusaders of the Middle Ages also attempted the impossible—to convert unbelievers to Christianity by force of arms. Later, through hard work, good deeds, and love—not force—a relatively few missionaries were successful in carrying God's word into every corner of the world.

Agriculture's modern quest for the unattainable is the equally fruitless search for a "sound, workable Government farm program."

How many years of declining farm prices and discouragingly low income must we endure before politicians learn, as most farmers already know, that there "ain't no such thing"?

There are many areas for proper and valuable Government activity in agriculture research, education, market information, and others.

On the other hand, the numerous Federal Government attempts to establish prices, control production, and subsidize farm family income have failed in their purpose and have created huge price-depressing surpluses.

We have tried almost every political panacea imaginable—quotas, allotments, income payments, export subsidies, high price supports, two-price plans and other schemes to replace the market price system.

Why is the search for a sound, workable government price fixing or income support program so hopeless? The market price has proved to be the only satisfactory means of letting producers know which commodites are needed and which are being rejected by consumers.

Any government action which interferes substantially with the operation of market prices inevitably will result in both surpluses of unwanted goods and artificial scarcities which force substitution and loss of markets. This is because administered prices reflect the bureaucratic or political decision of a few officials while the competitive market reflects the demands of many millions.

Again the cry goes up—let all farm organizations get together, compromise their differences and agree on a farm program. The policies of the farm organizations are developed by the members; thus any compromise (except within these policies) would be a from the top down betrayal of the trust placed in leadership. Furthermore, the minority farm organizations would be very unlikely to agree to a vote on policy proposals in proportion to their paid membership since three-fourths of all organized farmers are in Farm Bureau.

Finally, a patched together compromise of conflicting policies would very likely result in increased Government intervention in agriculture—the very thing we must avoid if we want to secure improved farm family income.

Yes, a sound, workable Government program is agriculture's holy grail—a phantom, will-o'-the-wisp that can never be attained because it replaces God-given economic processes with manmade political power. When farmers turn from the temptation of using compulsion to secure their fair share of national income and return to using their ingenuity and organizational abilities to produce and market their crops to all consumer needs throughout the world—only then will they truly find the holy grail that rewards those who serve.

I next refer to an article which appeared in the May 15, 1960, issue of the Fresno Bee. This article stresses the self-help actions of the California cotton industry, under the caption "Shortage of Acala Fiber is Predicted":

SHORTAGE OF ACALA FIBER IS PREDICTED

SHAFTER, KERN COUNTY.—"I believe there will be a shortage of San Joaquin Valley cotton on the market this fall even though we stand to produce more fiber than ever before. The demand will exceed the supply."

Even for a man sold on the qualities and yield of California's famed Acala 4-42 cotton, this is a whale of a statement. Especially in the light of increased acreage this year which may bring the valley's 1960 crop up to some 1,800,000 bales or better.

CONVINCING POINTS

But John Turner, director of the U.S. Cotton Field Station at Shafter, backs up his prediction with some pretty convincing points:

"In the last 5 years there has been a big upsurge in raw cotton for fabrics," he observed, "for instance, the wash and wear apparel requires a fiber 20 percent stronger than that used in regular cotton fabrics.

"Acala cotton definitely leads the field in this quality, along with uniformity and spinning quality. With this increasing wash and wear popularity, the mills must use finishes which take away much of the strength of the original fiber. This is where the extra strength of Acala pays off," he said.

BUYERS PRAISE COTTON

But this is not just Turner's opinion. He wrote letters to 9 major mills which buy a total of 600,000 bales from California each year, or about one third of the State's crop. He asked the mills how they felt about California's Acala cotton, and more specifically, what their ideas were about any abandonment of the State's one variety law.

"Some mills even went so far as saying they would withdraw their buyers from this area if other varieties were introduced," Turner explained as he thumbed through a sheaf of replies from the mills.

"There is an urgent demand for your cotton. Even though there is a freight disadvantage, we paid 2 to 3 cents a pound premium for Acala last season. It would be a serious mistake to abandon your single variety program," Turner quoted from one letter.

"When we want exceptional strength we must turn to the irrigated Acala," wrote one buyer. Another said, "We specify in our contracts for purchasing California cotton that this cotton must be grown in the San Joaquin Valley. We are interested in purchasing cotton grown only from Acala 4-42 seed."

Others replied that it would be a great calamity if the valley's one variety proposition should fall through. A final letter points out that "we think the Imperial Valley cotton in the same grade and staple is very much inferior to the San Joaquin."

Turner explains that such demand for Acala, resulting from nearly 30 years of experimentation and breeding, has not always been the rule.

IMPROVED STRAIN

"Through the 1940's, mills used only about 35 to 40 percent California cotton blended with southern varieties to get uniformity and strength. Acala had the strength, but impurities caused by immature fiber, called neps, presented spinning problems," Turner said.

"Through breeding and learning more about growing our crop with irrigation, we eliminated the neppiness and broadened our markets," he added.

"Acala, always a longer staple, has become a trademark," he said, "even though the present Acala no more resembles the Acala of the 1920's than the touted Deltapine does our Acala. In the last 15 years technologists have developed tests which can check the fiber features needed to offer best spinning characteristics such as elasticity, and fineness, adding more fuel to the demand for our cotton."

I next refer to an article appearing in the May 9 issue of the same paper under the caption "California Tops United States in Cotton Acreage Yield":

CALIFORNIA TOPS UNITED STATES IN COTTON ACREAGE VIELD

California last year was first in the Nation in the average yield of cotton, second in total production and fourth in total acreage.

This was reported in the U.S. Department of Agriculture in its final report on the Nation's 1959 cotton crop.

The Associated Press reports California produced 1,922,000 bales on 875,000 acres, an average of 1,051 pounds an acre, the USDA said.

TEXAS ACREAGE

Texas' plantings totaled 6,350,000 acres and it produced 4,416,000 bales. Its average was 334 pounds an acre, far below the national average of 462 pounds an acre.

The total national production was 14,-551,000 bales on 15,090,000 acres. The income was \$2,281,300,000 from the bales and \$232,039,000 from 5,989 tons of cottonseed.

The average returns to growers were 31.4 cents a pound for the cotton lint, compared to 33.23 cents in 1958, and \$38.30 a ton for cotton seed, compared with \$43.80 in 1958.

OTHER FIGURES.

The harvested acreage, the average yield an acre and the production, respectively in the other States last year were:

North Carolina, 390,000 acres harvested; 395 pounds per acre and production 322,000 bales.

South Carolina, 565,000; 353 and 417,000, Georgia, 655,000; 381 and 521,000. Tennessee, 510,000; 620 and 660,000. Alabama, 835,000; 412 and 718,000. Mississippi, 1,460,000; 514 and 1,460,000. Missouri, 398,000; 610 and 508,000. Arkansas, 1,300,000; 568 and 1,544,000. Louisiana, 490,000; 481 and 492,000. Oklahoma, 625,000; 292 and 381,000. New Mexico, 198,000; 782 and 323,000. Arizona, 383,000; 893 and 715,000. Virginia, 16,000; 378 and 12,600. Florida, 26,500; 244 and 13,500. Illinois, 2,200; 343 and 1,600. Kentucky, 7,900; 631 and 10,400. Nevada, 3,400; 848 and 6,000.

Health Benefits Bill

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. METCALF. Mr. Speaker, today I have introduced in the House of Representatives a health benefits bill which is summarized as follows:

The bill provides basic health benefits as a matter of right to all persons aged 68 or over, starting July 1, 1961. It contains parallel but separately financed provisions for those covered by old-age, survivors, and disability insurance and for all those without such coverage.

I. VOLUNTARY HEALTH BENEFITS THROUGH THE OASI SYSTEM

1. For 9 million persons aged 68 or over who are eligible for OASDI monthly benefits, the bill provides either specified health benefits or, if they prefer, a \$4 increase in their monthly cash payments.

2. The benefits would be paid as a matter of right without a means or income test, utilizing the economical machinery of the OASDI system.

3. Health benefits would include up to 365 days of hospital care, 180 days of skilled nursing home recuperative care, and 365 days of visiting nurse services. Certain special hospital services would be covered in addition to those usually rendered; namely, laboratory and X-ray, private nurses, and physical restoration.

4. A physician's certification of the need for care would be required, and, for hospital care, beneficiaries would have to pay an initial deductible of 3 days or \$100, whichever is less, repeated after 24 days.

5. The long-range cost is estimated at between 0.45 and 0.5 percent of payrolls but would be less in early years.

6. Contribution rates would be increased in 1961 to meet the estimated cost as follows: One-quarter percent increase for employers and employees, and three-eighth's percent increase for the self-employed, on earnings up to the ceiling of \$4,800. No expenditures from general revenues wold be required for persons covered by OASDI.

7. A Federal health benefits trust fund would be established similar to the OASI

trust fund.

8. The Secretary of HEW would consult with a representative advisory council before making regulations. He would be authorized to utilize State health agencies and voluntary nonprofit organizations in the administration of the program.

9. Agreements relating to the provision of services would be made with the hospital, nursing home, or visiting nurse service agency or with its authorized representative. Any qualified provider of services would have the right to participate, and individuals could choose among them. The method of determining the amount of payments would be based on the reasonable cost of rendering the services.

10. Nothing in the act shall be construed to give the Secretary supervision or control of the practice of medicine or the manner in which medical services are provided.

II. COMPARABLE HEALTH BENEFITS FOR PERSONS NOT ELIGIBLE FOR OASDI

- 1. Persons aged 63 and over not eligible for OASDI benefits would receive identical health benefits through a parallel program financed from general revenues. More than 2 million persons would be aided in this manner. No income or means test would be applied.
- 2. The cost for them would be about \$60 a year each. The total Federal outlay of between \$150 million and \$200 million a year would be offset by substantial savings in outlays for public assistance and care of veterans.
- Authority is provided for necessary annual appropriations from the general funds of the Treasury.

III. RESEARCH AND DEMONSTRATION

1. The bill would direct the Secretary of HEW to conduct research on the health care of older persons and on improvements in the quality and efficiency of health services.

2. The Secretary is also authorized to conduct appropirate demonstration programs on how to meet the health needs of older persons as effectively and efficiently as possible in their communities.

Action for Foreign Policy

EXTENSION OF REMARKS

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. FULTON. Mr. Speaker, with the recent passage into law of the Mutual Security Authorization of 1960 and the approaching congressional action on the mutual security appropriation, I would like to call to the attention of the Congress and the American people an excellent and well prepared statement by Attorney John K. Tabor, of Pittsburgh,

Pa.

I believe this statement should be read with interest so that the views in this statement might be carefully considered:

PITTSBURGH, PA., May 20, 1960. Re action for foreign policy. Hon. JAMES G. FULTON Congress of the United States, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN FULTON: On behalf of the members of action for foreign policy, I forward a memorandum on the balance-ofpayments question as it relates to the appropriations bill for the mutual security pro-

gram, fiscal year 1960-61.

As you know, action for foreign policy is a group of Pittsburgh business and professional men and educators, of both political parties, who meet regularly to study cur-rent issues in the foreign policy field where legislative action is involved. The conclusions and recommendations in the enclosed memorandum are the product of such a study.
Yours very truly.

JOHN K. TABOR.

MEMORANDUM

Appropriation bills for the mutual security program will soon be considered by the Congress. Opponents of these bills argue that these programs should be curtailed be-cause of a dangerous increase of the imbalance of payments. They point out that in 1959 the imbalance rose to \$3.7 billion from the 1958 high of \$3.4 billion.

We respectfully submit that the balance of payments problem is being adjusted by other appropriate measures and that reduction of the mutual security program, in any event, will not in fact substantially reduce the U.S. payments imbalance.

Without any substantial change in the mutual security program for the fiscal year 1959-60, the Commerce Department reports that during the first quarter of 1960 the deficit was cut by about \$400 million. It is estimated that the deficit in the balance of payments may be reduced this year to approximately \$2 billion to \$2.5 billion, a sharp drop from \$3.7 billion in 1959 and \$3.4 billion n 1958.

Even if there were the prospect of no alleviation of the problem of the balance of payments we believe that the mutual security program should be supported for reasons of national policy independent of the current balance of payments deficit situation. Mutual security program is a vital instrument of U.S. foreign policy in strengthening and developing the free world, and it should not be emasculated for fiscal reasons short of a national emergency which in it-

self will threaten national security.

Significantly, the contribution of the mutual security program to the deficit is relatively minor. The vast portion of foreign aid which is recorded under the balance of payments accounting system as foreign payments returns in the short-term as receipts to the United States. For fiscal year 1960 it be the United States. For iscal year 1900 is a setimated by Mr. John O. Bell, of the State Department's Office of Deputy Coordinator for mutual security, that only \$150 million of the nonmilitary part of the mutual security. rity program payments abroad will fall to return as balance of payments receipts to the United States in the short term. The rea-son for this is that foreign beneficiaries of mutual security program funds buy substantial quantities of goods and services in the United States and remit mutual security program funds or credits created in turn by se funds, in payment.

One of the reasons for the balance of payments deficit has been a decline in U.S. exports. Realizing this, President Elsenhower and the executive branch announced on March 17, 1930 the establishment of a naon March 17, 1960 the establishment of a national export expansion program by which

the Departments of State, Commerce, and the U.S. Export-Import Bank initiated a series of coordinated measures to enlarge American export business and thus to overcome the balance of payments problem by the affirmative steps of increasing the amount of American business overseas and amount of American jobs thus created. Over the long term it should be noted that the mutual security program develops foreign markets and thus should increase American exports and thereby our payments posi-

Another aspect of the balance of payments deficit should be noted in the words of Mr. Carl P. Blackwell, Director, International Economic Analysis Division, U.S. Department of Commerce, who says that "It is essentially a matter of short-term deficit for long-term gain." Thus in 1958, \$1.1 billion in U.S. direct private investment abroad was recorded as outgoing payments. Actually this amount classed as an "expenditure" is a long-term capital investment abroad which will some day return substantial dividends and royalties to the United States as balance of payments receipts. Meanwhile, this outflow of capital is of great strategic and humanitarian value to the United States and the free world.

CONCLUSION

For the foregoing reasons we urge that the Congress take all appropriate action to reduce the balance of payments deficit by measures designed to strengthen and enlarge American exports; and we oppose as unwise and shortsighted alleged solutions of balance of payments problem by curtailment of the

mutual security program.

Respectfully submitted.

H.R. 12255

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. GALLAGHER. Mr. Speaker, recently, I introduced a bill, H.R. 12255, which would make health benefits part of the social security system. Any person eligible for old-age survivors or disability benefits would also be eligible for health benefits. These benefits would include 90 days of hospital care per year and 120 days nursing home care per year—less any days of hospitalization.

We know, of course, that millions of our senior citizens need help and they need it immediately. There is no doubt in my mind that the strength of our democratic system of Government depends upon our ability to meet the needs of the people as they arise, and not later. Every delay simply means that thousands, if not millions, of people will find their anticipated later years somewhat tarnished if they are denied the feeling of security that comes from the knowledge that medical aid will be available to them.

I would like to include as part of my remarks a resolution which was recently passed by the General Assembly of the State of New Jersey. I concur wholeheartedly in this resolution:

A CONCURRENT RESOLUTION MEMORIALIZING CONGRESS TO ENACT LEGISLATION PROVIDING HOSPITAL, SURGICAL, AND NURSING HOME BENEFITS TO OLD-AGE SURVIVORS INSURANCE

Whereas 500,000 New Jersey men and women, having passed the age of 65, require more than 21/2 times as much hospitalization as the general population; and

Whereas more than half of the aged population have incomes of less than \$1,000 per

year; and

Whereas access to the highest quality health care should be the right of the elderly under circumstances which promote self-respect and encourage independence: Be it

Resolved by the General Assembly of the State of New Jersey (the Senate concurring):

- 1. The Congress of the United States is memorialized to enact amendments to the Social Security Act so that old-age and survivors insurance recipients will receive hospital, surgical and nursing home benefits as a benefit right.
- 2. An authenticated copy of this resolution be forwarded to the U.S. Senate and House of Representatives.
- 3. Copies of this resolution be forwarded to the President of the United States and to the Members of Congress elected from New Jersev.

MAURICE V. BRADY, Speaker of the General Assembly.

Attest:

MAURICE F. KAIP, Clerk of the General Assembly. GEORGE HARPER, President of the Senate.

Attest:

HENRY H. PATTERSON, Secretary of the Senate. Internatioal Crossroads Breakfast-Part III

EXTENSION OF REMARKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I desire to bring to the attention of the Members more excerpts from letters which have been received as testimony to the effective role the international crossroads breakfast plays in promoting better understanding among the peoples of the world. These letters come from the farflung corners of the earth, and even though I can't include them all, I do want to mention the names of many of the others who have written:

Dr. Italo G. Gabrielli, assistant professor, Institute of Physics, University of Trieste, writes:

"I enjoyed indeed the meeting among people coming from each region of the world, realizing the need, the joy, of mutual knowledge, of putting down boundaries of doing of this small world the peaceful garden of the whole mankind. God helps the men who put together their energies for a better, more human, and more Christian world."

Robert McLaughlin, Sydney, New South Wales, Australia, writes:

"The 'Crossroads' is a wonderful idea and could only have evolved in the minds of idealists. As I passed through your city as a tourist on Sunday, July 7, 1957, I had never heard of your organization until a kindly spoken gentleman approached me-a some what homesick fellow at the time-in the hall and extended me an invitation to your weekly functions. I can assure you, Mr. Brindle, it gave my morale a terrific and much needed boost that morning. As far as I can now remember, the inviter was a reasonably tall soft-spoken man, with black reasonably tail soft-spoken man, with black hair and without affectation. Does this description identify the person I can still recollect fairly clearly? I was asked to say a few words but I was caught unawares. But not so the next time, which I hope to be during mid-1961, and possibly next Sepember when I will be able to speak for 3 or 4 minutes on our fair land down under. I talked to your guest speaker, Hon. FRED SCHWENGEL, for a few minutes after the breakfast that morning."

Kin'ichi Komada, dean, faculty of education, Kyushu University, Fukuoka, Japan, comments.

"I am very happy to realize that the friendly relations between your country and our country has been promoted these days. I often recall of the nice days I spent in America. I have a wish to visit your country again after my position as dean has expired. And how I wish to meet you all again at the international crossroads.

Jose R. Collante, treasurer, Province of Tarlac, Philippines, adds:

"As a message to the people of the world. I should say that there is no better motivating force to bring about the real peace in the hearts of men than the building up of goodwill between neighbors. The world has so shrunk now that everyone is a neighbor to each other. On that score, it behooves that every individual should cultivate that virtue of friendship which can make people forget their animosities and remember the sweetness of friendship to all those that cross and pass the International Crossroads of

International Understanding Fostered by Washington, D.C., YMCA. I extend to them the felicitations and greetings of goodwill of the people of the Philippines."

Esteban A. de Ocampo, professor of history and political science at University of the East and at the Manuel L. Quezon University, both in Manila, reports:

"I remember very well that I was privileged to attend two Sunday breakfast meetings there: first, on November 14, 1954 when Dr. Lyle W. Ashby of the NEA spoke on American education; the second, on March 6, 1955 when Senator Roman HRUSKA of Nebraska was the guest speaker.

"I wish I could come to the United States again this year—the "Visit American Year" and renew acquaintances and see and learn more of your huge industries, your low-cost housing projects, your superhighways and freeways, your imposing buildings, your well-stacked libraries and museums, your clean cities and communities, your well-kept streets, your advanced educational institutions and other cultural centers, your friendly people, and also feel once more the spirit of freedom and independence. In all my classes and even outside the classroom I have always emphasized these points, and I always ended my talks with the statement that "the Filipinos have no better and sincere friends in this world than the Americans."

"My most sincere congratulations to the Crossroads in its 14th anniversay."

Hans Mikolsen, Bergen, Norway, writes:

"It is now 11 years since I visited United States. The years are going fast. After my studying trip in your country I succeeded in advancing to supervisor by the telecommunications at the weather bureau in western Norway. My job is to take care of all reports being available for weather forecast.

Sorab K. Direcha, president, Lions Club of Bombay, writes:

"I send to you my best wishes and felicitations. Our respective countries since the visit of President Eisenhower have come closer together than ever before and I do feel there is far more awareness and appreciation in the States now of our difficulties, our wants and our aspirations than there ever was before."

Ugo M. Colombo, director of public assistance, city of Milan, Italy, writes:

"It is a pleasant for me to remember so many friends as you and all the life members; and it is an honor to send my news to you and your distinguished fellows assembled in Washington, D.C., that we from Italy, consider the pilot center of peace, progress, and liberty."

Dr. Mohamad Javad Meimandi-Nejad, University of Tehran, Iran, writes:

"My thoughts are with you on many occasions, especially on Sunday mornings and on Moslem equivalents, i.e., Friday mornings, and always miss the wonderful fellowship, lectures, prayers you and your colleagues brought to the group to lucky people who became members of the breakfast club. The breakfast club is but another significant way you have contributed to make the lives of your friends and acquaintances rich and worth sharing with others.

"I can say with proud assurance that you
"I can say with proud assurance that you are doing what many a saint has done. sow love where there is a vacuum of feeling; you sow hope where there is aimless wandering; you sow joy where there is need for joy; and you sow faith in the hearts that seek it and in the hearts that wonder what It is

"To have shared your thoughts, your knowledge, and your feelings persistently with at least 12,000 peoples of all religions, creeds, countries, colors and races, and to have created mutual relations between them is a work of marvel, one that merits thanks, wishes, applauses and spread."

Other messages of a Similar Congratulatory Nature came from:

V. K. Pillai, medical doctor, Kerali, India. G. Oungre, French Branch of Kodak, Vincennes, France.

Robert H. Orgill, inventor, Australia. David Hudson, Lusaka, North Rhodesia. Gonzalo Ruz, medical doctor, Mexico, D.F. Jamshed Aga, architect, Bombay, India. C. L. Chatterjee, Jabalpur, India.

P. H. Kong, executive secretary, Joint Telecommunications Conference, Taipei.

Shiro Takahashi, associate general secretary, YMCA, Yokohama.

C. S. Parthasarathy, assistant chief, Irrigation Planning Commission, New Delhi.

Long-Distance Phone Rates

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 11, 1960

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following Robert S. Allen-Paul Scott Report, which appeared in their syndicated column of May 25,

ROBERT S. ALLEN-PAUL SCOTT REPORT

Washington.—Long-distance users are in for some surprisingly good news.

The Federal Communications Commission, under strong congressional prodding. is planning a new slash in rates charged by the American Telephone & Telegraph Co. and its affiliating companies.

Still to be determined is the amount of the reduction and whether the FCC should set the new rates by public hearings or by negotiations with the companies.

These and other details are to be ironed out at a special Commission meeting FCC Chairman Frederick Ford is calling for June. That's what Ford is reporting to other high Government officials who inquire about the Commission's long distance telephone ratemaking plans for 1960.

In these backstage talks, Ford reveals that the FCC is now studying a number of rate reduction proposals and that he expects the

Commission to act affirmatively before fall.

The FCC Chairman reports that the plan receiving the Commission's greatest attention is a proposal to slash rates \$70 million year offered by Representative EMANUEL CELLER, Democrat, of New York, chairman of the House Antitrust Subcommittee. This proposal has the support of the FCC's own ratemaking staff.

Representative CELLES, whose prodding was responsible for a \$50 million a year cut in rates last September, is basing his new reduction demand on studies by his staff of the interstate earnings of A.T. & T.

Earlier this month he fired off a letter to Ford contending that these studies show that the Bell System's rate of return for interstate services still is at an unduly excessive level.

Representative CELLER pointed out that the A.T. & T. earning rate climbed to nearly percent (of the book cost of facilities) in April, or to a level approximately 11/2 percent above the 6½ percent rate that the Commission set as reasonable.

He also presented Ford with figures to show that the net income of A.T. & T. is now running above the level of last September whan the FCC ordered the \$50 million re-

In reply, Ford assured CELLER that "This matter is receiving the Commission's immediate attention," and that action can be ex-Pected after the May earning figures are available.

Ford also voiced the Commission's con-cern about the present level of A.T. & T. earnings, stating:

"The interstate operations of the Bell System have been producing a ratio of net operating income above the level the Commission anticipated would result from the reduction.

Where Is the Justice?

EXTENSION OF REMARKS OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. BECKER. Mr. Speaker, I am in-Serting in the RECORD today an article appearing in two weekly newspapers in my district; namely, the Long Island Graphic and the Roosevelt Press. This article written by Charles W. Koenig is an on-the-spot witness of a rally held in Washington, D.C., on Sunday, May 15. This is a true reporting of a situation that I believe should never be permitted to occur anywhere in this country, far less than in the Capital of this Nation. I believe further it should open the eyes of all Americans that in our Nation we have many hatemongers and it is my fervent opinion that they can be weeded out and exposed for what they are. I further subscribe to the last paragraph of this article, "It Could Happen Here," and I am sending this with a forwarding letter to the Attorney General for immediate investigation and whatever action within the law that it is possible to

The article follows:

WHERE IS THE JUSTICE? (By Charles W. Koenig)

As America makes plans to pay tribute next Monday, Memorial Day to her fallen and endeavors to hold high the torch of faith and freedom passed on to her by our honored war dead-we (members of this newspaper's staff) report a situation we feel should be brought to the attention of every loyal American.

About a week ago one of our Washington, D.C. associates telephoned to report an open air rally was being planned by a group of young men and women. He informed us the rally would be held on May 15 in a park directly in front of the Department of Justice Building, and stated he believed the rally of such importance it would prove of in terest to every loyal American regardless of the area in which he lives.

And his tone was that of the sickened.

STAFF CONFERENCE CALLED

I immediately called a conference with members of my supervisory staff. Moments later the decision had been made. Even though our newspapers mainly are local in nature, somehow we sensed the item we were about to report definitely would prove of great importance to all Americans—and especially to the futures of their children.

And so, armed with pencils and copy paper, business manager and political columnist Harold W. Gierie, Oscar Mendelis and myself departed for Washington on the morning of Sunday, May 15. Unfortunately, heavy traffic forced us to arrive at our destination a half-hour late—but in sufficient time to see and hear enough to make us wonder if per-haps many of those we will honor next Monday had been called upon to spill their blood

YOUNG WOMAN HYSTERICAL

Approaching the park our attention was drawn by a commotion—a young woman (perhaps 21 or 22) being assisted by two policemen. In reportorial terms her condition safely could be described as hysterical. If facial expression can be described as pleading, this young lady was possessed of that expression. We who had traveled from a small, Freeport newspaper office felt compelled to ask: "What's the matter, Miss?"

In a loud, sobbing, hysterical voice she replied: "Murderers. Liars. Please, please, won't someone stop them?-they murdered my whole family." And although we were standing in bright sunlight, we were chilled-chilled as only one can be after hearing the anguished cries of one of God's children. We helped quiet her, and one of the many uniformed policemen stepped forward and gently escorted her from the

But if we were chilled by the soulful screams of the young lady, it was warmth compared with the cold, clammy sensation which overpowered us as we neared a wooden stand upon which stood a tall, loud-voiced man of about 30 ranting into a microphone. And it was as though part of a horrible dream when we read the block-lettered sign, suspended above his read. It bore but three words, The first, in small letters, read "American." The third, in equally small letters, read "Party." The centered word, in very large letters, read "Nazi."

Our gaze was held, ladies and gentlemen, "American Nazi Party."

And we knew why the sickened tone of the telephone voice of our Washington associate, for we-three mature adults, each a father possessed of loved ones, each a loyal and proud American-were chilled, were sickened, and we were frightened.

A TERRIBLE DREAM?

Turning slowly, Mr. Gierie looked at me-I looked at Mr. Mendelis-and in amazement we looked at each other. Could it be possible? Was it a terrible dream-or were we actually witnessing our beloved America

again being threatened by nazism. were no swastikas emblematic of the National Socialist German Workers' Party of the Third German Reich. But, ladies, and gentlemen, on that Sunday afternoon-in the shadow of the Department of Justice Building—the concepts of dread nazism were being espoused by a man whose identity we only could establish as "Rockwell."

ALL FAITHS ATTACKED

Dumbfounded, we stood there and listened as he heaped every possible blame on the Jews. He accused them of "pulling in the Negroes and urging them to 'rise up"." He stated "Washington is full of Jewish lobbyists, industrialists, and public speakers-and Jews such as Anna M. Rosenberg sent to spread filthy propaganda."
This man, in whose presence we stood in amazement, screamed to his audience that "David Sarnoff, also a Jew, head of the television industry, has given orders to coat all TV commercials for the same propaganda purpose." His shrill voice pierced the air as he shouted: "The Germans didn't murder 6 million Jews. They were sent to England, and most of them to the Bronx." He ranted about the overpowering aims and the hidden intents of other faiths-and indicated nazi-"the cure-all for our troubled ism to be

Ladies and gentlemen, suddenly espouser of dreaded nazism explained-believe it or not-"I am for America and America is for Americans only." And then chilled blood grew colder as he stood upright, shot his right hand into the air-and voice which must have wilted the wreath on the grave of our Nation's Un-known Soldier—pierced the air with: "Sig Heil!

Thirty of his cohorts responded in gesture and cry: "Sig Hell."

And as Rockwell stepped from the platform, a few persons from the audience removed the banner and stand-and strode from the park-with the espouser of nazism leading the pack.

CAN WE AFFORD TO FORGET?

Ladies and gentlemen, this is not fiction. It is cold, startling fact. We were there. We saw it. We heard it. And we were sickened by what we heard and by what

We are mature, reasonably intelligent, and not inclined to be alarmists. Nevertheless we still are frightened by what we saw and heard. And we cannot help but wonder whether those of our Capital have forgotten the Bund meetings of Yorkville and Madison Square Garden. Have they forgotten the gas chambers? Have they forgotten the indig-nities heaped upon Christian and Jew in Nazi prison and slave labor camps? Where are those whose loved one's blood was turned loose by Nazi bayonets? Is the potential danger to our American way of life-the evil we saw and heard in our Nation's Capitalbeing engendered without challenge by efforts of the Veterans of Foreign Wars, the American Legion, the Jewish War Veterans, and other organizations regarded as respected watchdogs of our Nation's internal security?

IT COULD HAPPEN HERE

Just as strongly as we believe in the tenets of Americanism do we believe God created Hell for persons such as Rockwell, No one more than he who serves in the newspaper profession realizes the importance of free speech. But it does cause one to be sickened when he views the injustice of permitting supporters of Nazism to espouse their venom under protection of free speech—for they are turning one of our treasured freedoms into a weapon tipped with deadly poison.

This is happening, ladies and gentlemenin a park-in front of our Nation's Department of Justice Building. It could happen in front of our own town hall. Pray that it

Daily Digest

HIGHLIGHTS

Senate passed 55 bills on calendar call, and recommitted bill to permit serving of oleo in Navy.

House passed school construction assistance bill.

Senate

Chamber Action

Routine Proceedings, pages 10329-10344

Bills Introduced: Nine bills and one resolution were introduced, as follows: S. 3593-3601; and S. Res. 328.

Page 10331

Bills Reported: Reports were made as follows:

H.R. 11045, to permit the conversion or exchange of policies of national service life insurance to a new modified plan, with amendments (S. Rept. 1485);

S. 2869, to restore the size and weight limitations on fourth-class matter mailed to or from Alaska and Hawaii which existed prior to their admission as States (S. Rept. 1486);

S. 2893, to permit weekly publications to suspend publication for not more than two issues in any 1 calendar year without loss of second-class privileges (S. Rept. 1487);

H.R. 6830, providing for uniformity of application of postal requirements respecting disclosure of average numbers of copies of publications sold or distributed to subscribers (S. Rept. 1488); and

H.R. 10996, authorizing use of certified mail for service of matter required by certain laws to be served by registered mail (S. Rept. 1489).

Authority To Meet: Committee on Foreign Relations was authorized to meet during session of Senate on Friday, May 27.

Page 10363

Oleo—Navy: By voice vote, Senate adopted Thurmond motion to recommit to Committee on Armed Services S. 2168, to permit the Navy to serve oleomargarine as part of its authorized ration. This action was taken after Senate adopted, by 48 yeas to 32 nays, Proxmire amendment that no oleomargarine shall be acquired for use by Navy unless Secretary of Agriculture certifies (1) that no purchases of milk or dairy products will be made in fiscal year for price-support purposes, and (2) that acquisition will not contribute to a surplus of milk or dairy products. Senate tabled motion to reconsider adoption of Proxmire amendment.

Pages 10344-10346, 10348-10349, 10354-10355, 10358-10363, 10388

Call of Calendar: On call of calendar, 55 measures, of which 27 were private, were passed as follows:

Without amendment and cleared for President:

RFC—payment in lieu of taxes: H.R. 9983, extending period for which payment in lieu of taxes may be made with respect to certain real property transferred by the RFC to other Government departments;

Veterans—service-connected: H.R. 113, providing that a service-connected disability in force for 10 or more years shall not be severed except when based on fraud;

Veterans—dependents: H.R. 276, relating to the effective date of additional compensation for veterans' dependents;

Veterans—death benefits: H.R. 641, to make uniform the marriage date for veterans' service-connected death benefits;

Veterans—dependency and indemnity; H.R. 7502, to amend the basis for certifications with respect to basic pay for dependency and indemnity compensation award purposes;

World War II—aviation: H.R. 9785, to equalize insurance benefits for certain World War II aviation students:

Veterans—children: H.R. 9788, to bar duplicate benefit payments to children of veterans;

Veterans—insurance waivers: H.R. 10703, to grant a waiver of national service life insurance premiums for certain totally disabled veterans;

Veterans—children benefits: H.R. 10898, to provide \$12 for each additional child in excess of three as additional compensation for seriously disabled veterans;

Auto exhausts: H.R. 8238, authorizing a study, from the standpoint of public health, of substances from automobile exhausts;

Railroad—indebtedness: H.R. 11405, relating to the income tax treatment of certain discharges of indebtedness of railroad corporations; and

Private bills: 16 private bills, H.R. 1402, 1463, 1519, 3253, 3827, 4763, 8798, 11190, 1542, 3107, 7036, 8217, 8806, 9470, 9752, and 10947.

Appendix

A New Honor for Senator Bartlett

EXTENSION OF REMARKS

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Friday, May 27, 1960

Mr. MAGNUSON. Mr. President, a new honor, that of doctorate of laws, has been conferred upon our colleague, Senator E. L. (BoB) BARTLETT of Alaska.

This is even more meaningful when We consider that the high honor was given by the University of Alaska.

None can know more than Alaskans themselves the key role played by our distinguished colleague in achieving statehood and bringing Alaska into the family of States in our Union.

Thus my pleasure at this time to ask the unanimous consent that the remarks made by Senator BARTLETT on the memorable occasion when this doctorate of laws was presented to be printed in the Appendix of the RECORD.

There being no objection, the address Was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR E. L. BARTLETT, UNIVER-SITY OF ALASKA, MAY 23, 1960

I take my theme this day from the recent and alarming events which have so shattered the hopes of the world for peace. We had looked forward with a measured degree of optimism to a lessening of tensions which have been building up over the years, layer by layer, almost to the breaking point. Now the leader of the Soviet Government has, in response to God knows what pressures or desires, seen fit in loud and angry and unreasonable words to end the summit conference, which he was so instrumental in promoting, even before its real beginning.

The hard truth is that we are now living

in a world at war.

There is an unalterable conflict between our beliefs and those the Communists live by. Necessity may reduce the overt expressions of that conflict and practicalities may compel the Soviet to deviate at times from the rigid Communist creed. The conflict between their creed and ours, however, is as basic and enduring as the conflict between truth and error.

We regard communism as merely a varlation on the age-old theme of dictatorship. But, in presenting their beliefs to the yetuncommitted peoples, the Communists have great advantage. That advantage lies in the fact that communism is a system worked out to every detail. This system, besides the utopia it promises, has very concrete ideas readily adaptable for every nation and people. Moreover, the uncommitted peoples, yearning for some change in their present conditions, can identify the Communist cause with a new and promising fulfillment of their just aspirations. It is more difficult for them to understand that ours is a dynamic, progressive society which changes to meet new problems without losing faith with the basic principles that gave it birth.

Democracy, of course, is not primarily a system at all but a set of values

The chief of these values is that the individual human being is a creature of infinite worth; government therefore must protect and aid the individual. Some concessions may be asked of him, but he must never be sacrificed for the good of the State, the future, the proletariat, or any cause Our ideas of self-government, whatsoever. majority rule, popular sovereignty, all derive from the concept that government is an instrument for service.

Communism does not believe in the individual except as a finite part of the whole, existing for the State rather than the State for him. Democracy offers a method of making community decisions and a climate for ideological competition. Ours is the faith of Milton: "Let truth and falsehood grapple; whoever knew truth put to the worse in a free and equal encounter?"

We can explain ourselves only by our example. Since one of our beliefs is in local self-government, government by those most nearly concerned whenever possible, the achievement of statehood by Alaska marks a very important step in the kind of demonstration I have in mind. This, then, is an awesome duty of Alaska as a new State. We must, having in mind all the accumulated experiences of democracy to this time, fash-ion a State which shall so nearly express

our beliefs that we can show the world a model workshop wherein the values we honor are practiced.

Our Founding Fathers committed these United States to what they believed the best possible government. If we still believe in that commitment, we must strive to express it in our daily lives.

In this respect, Alaska is no different from older States, except in this: We are, as a new State, less hampered by traditions that may be confused with righteousness because they are old. We can look more clearly on every proposed new step and decide whether it truly fulfills our beliefs. And it is our duty to make such a searching appraisal of each

The decade of the fifties in America has been characterized as one of self-indulgence. Our people, especially the young, sought escape from the burden of worry and responsibility imposed upon a free people in a cold war in a nuclear world. Our mood, in fact, was almost reminiscent of the attitude which pervaded America in the twenties. We sought refuge in suburbia, a washerdrier, two cars, a secure job, a ranchhouse. It is interesting and it may be fruitful to ponder the reasons for that mood. sacrifices made necessary by war are gladly rendered by Americans. But the sacrifices of sustained, conscientious citizenship in a troubled world are less dramatic, though equally important. These sacrifices we did not make in the fifties.

The sixties must be different. The world does not owe us happiness-we owe it and ourselves service of the highest moral order. Our two-car families must not think of the years ahead as a time to acquire their third car. We must be willing, if necessary, to sacrifice all these comforts for the values we honor. It may be that in the years to come, we shall have to make such sacrifices to maintain freedom in a world at strife. It is well to remember that Russians are devoting far more of their national production to science, to capital improvements, to their military establishment and to education and far less to consumer goods than we. must reject absolutely the contention expressed recently by an important U.S. official that we are in business to produce consumer goods and as long as they are coming out in volume, all is well in America. Was this the reason for the sacrifices at Valley Forge, was this why our countrymen have always gathered in collective nobility when our Nation has been threatened and they were taken to the summits of endeavor by great leader-ship? The question answers itself.

We have boasted before the world of the material comforts, the consumer goods our system has given us. This is very well if we mean to say to others less fortunate,
"We shall help you too to attain this high
standard of living." But we must take care
to avoid a misconstruction of our way of life. The beauty of America does not lie in material wealth. It lies in freedom. We cannot pause for the leisurely enjoyment of our riches when half the world is hungry for food and freedom. We cannot pause, because the Soviet Union will not wait for us. But more important, we cannot rest because in so doing we deny what we stand for-equality and freedom of all men. lier I referred to the "sacrifices of conscientious citizenship." But as good a justification for freedom as any other is that the democratic process is a happy process for the fortunate citizens who practice it. It sharpens wits. It offers a test for lungs and voices and hearts. Democracy not only promotes wiser decisions, but general wisdom and creative habits which democratic citizens can apply in all their activities and

Democracy is based on the idea that each man should have a voice in his government. But he must exercise that voice conscientiously or the rights, with their duties, may be lost. This is a world in which we have to work for our blessings and the highest values depend on the most work, eternal vigilance, exacting effort. "No man is an island entire unto himself." No man can construct a private peace. Each is his brother's keeper, and it is of real importance to us if these brothers are starving in India or suffering under tyranny anywhere-or if our own legislature or city council is neglecting public welfare in favor of some special interest. Should we falter, should we neg-lect our duty in this world so interdependent, we will build our peace and happiness on shifting sands. We are all part of one another; the world is too closely knit for any isolated, self-absorbed success. And oddly, the interdependenece, which all of us would concede, seems easier to apply and less demanding as we speak of our brothers starving in India than as we speak of our disenfranchised brothers in the South. The moral requirement on our part, I submit, is essentially the same.

Government has become highly complex, and it is increasingly difficult to fulfill that primary duty of sustaining the human dig-nity of the individual. In his time, Jeffer-son could say that the least government is the best, because America was then an agricultural community in which each family was largely self-sustaining. But the industrial revolution has changed all of that. It is not so much a case of protecting management from labor, or the other way around, as a case of protecting us all from an industrial complex which will control us if we don't control it.

We, as a people, must be prepared to act to protect individuals and groups against pressures that would curtail freedom. Unfortunately—and this is what Thomas Jefferson feared-a government that is strong enough to protect the individual is apt to interfere with our freedoms. We must be on guard, because there are voices occa-sionally heard insisting we abrogate our inheritance of freedom as a means of erecting a bulwark against communism. Yet we must remember what we primarily oppose in communism is not an economic system, but a concept of society in which the individual is not a real entity—a society in which only the whole people, the State, is possessed of rights. In this connection, the ordinary use of the word "freedom" is not sufficiently extensive. The inroads which modern so ciety can make upon precious individualism, are not solely, or even principally, in the form of political restrictions upon those rights found in our first 10 amendments. They may instead take the form of pressures for conformity, or of the insiduous appeal of mass media. But in a political sense, it is on the State and local levels where the heritage of human rights can be most effec-

tively assured or abrogated. We in Alaska

must watch carefully. In this country, the most important field in which we carry out local self-government is education. Instead of being federally controlled, our schools are controlled by the towns and school district and the States. We must teach our children at every age how valuable our freedom is and how could be lost. Our children must have the fervor and vision of our forefathers if we are to keep the liberty they won us. We must love freedom and live so as to preserve it. Our example should verify our children's Where we have imperfectly fulfilled our democracy, we must perfect it, or, at a minimum, will to our children such love of liberty that will lead to correction of our mistakes and the changes necessary in a changing world, so that whatever economic and social changes the world makes, democracy itself will remain invincible. Indeed, teaching the young that freedom is a precious heritage may have far-reaching benefits. The mind that regards liberty as a precious legacy from preceding generations will be a mind which will hold in proper reverence the legacy of our arts and letters, our sciences and philosophy, our religions and our ethics, our language and our sport.

To fulfill our role as a State, Alaska is committed to act with intelligence, honesty, and vision. Should any of these be lacking we shall surely fail, even if we possess all other attributes in their highest order.

It is surely obvious that the complication of today's world demands clear intelligence. Nor is there today, nor was there ever in the past, any substitute for honesty, true dedication to a high moral order, and willingness to put service to such moral precepts ahead of personal gain or wishes. Vision is that combination of thought, diligence, and imagination behind all action.

If vision means this and not nonsense as the modern derogatory use indicates, let us, then, be visionary. Part of my vision for Alaska is this: The University of Alaska can well be the point from which these virtues come. A university in its highest function is surely a mighty force injecting moral value, intelligence, and vision into the life of the State. A university should be especially the point of a vision in our society. Nowhere else is there so nearly the perfect atmosphere for thoughtful, clear examination of our goals and our methods. Nowhere else is there the accumulation of material—the recorded thoughts of all men in this search

for the good. But more than all else the university is the home of that rare creativity kindled by the friction of young enthusiasm with mature minds—the flash that comes when age-old values or deep, valid thoughts or new perceptions fire in receptive and inventive brains. And the university is the place where an exchange of ideas is natural and itself creative. The thinker is the hardest working among all workingmen. And we need men who can and will think overtime.

This is a time of crisis when you who can think must make the commitment to intelligence, honesty, and vision and go out to lead our State and people to such fulfillment of democracy as will stand proudly before the world and before our own most critical examination.

Farm Legislation

EXTENSION OF REMARKS

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. BERRY. Mr. Speaker, I have asked consent to insert in the Record portions of two letters I have recently received from people in my district that, in my judgment, are too important to be filed away in my files without passing these thoughts on.

The first is from a friend of mine by the name of Evan McDonald. Part of his letter reads as follows:

Am against all bills such as H.R. 10363—the family farm bill—as socialistic. Socialism is a share the poverty system, where the government owns all the wealth and has complete power, the individuals sharing their poverty and hopelessness with each other. In fact, have always been against the New Deal trends and mean all of them.

I don't think the weak are made stronger by making the strong weaker. I believe in individual security, although the United States didn't become a strong Nation except by facing hard work, insecurity, and willingness to take their chances, win, lose, or draw even.

The second letter is from a rancher friend of mine by the name of Arnold Benson. Part of his letter is as follows:

I am writing in regard to a bill known as the family farm bill, H.R. 10363. This bill would, as I get it, tell us when and how many cattle we can sell and how many we can keep.

This is pretty well regulated by nature and not by some book-educated, drugstore cowboy. I don't believe in any Government supports and I'd like very much to run my own outfit if the Federal Government would just stay out of my business.

We cattlemen don't want any floors, ceilings, marketing quotas or supports. We pay our taxes and face blizzards and heat waves, get bucked off, and have horses fall on us. We don't cotton to any white collar telling us from behind a shiny desk, that was paid for out of our taxes, how we should run our outfit. We get the rough end of it and don't like any part of it.

I don't have a big outfit, but it isn't carrying any mortgages and I don't think I need any help in running it, especially from any socialistic thinker like the guy that dreamed up this mess.

I believe that you well understand the ranchers' problems and what they put up with. They're a breed all their own and from your newsletters, I certainly believe you are on our side, and right now we need all the help you can give us. We talk about this great free Nation of ours, but is it? I spent 4 years in the Army in World War II and 3 years in Europe supposedly fighting for a freedom. This kind of bill doesn't fit the kind of freedom I had in mind.

I am not the only one who feels this way. Many will sit back against the corral fence while the branding irons heat (it happened yesterday) and talk against it, but not to write to you and other Congressmen and tell them of their opinions.

Dignity and Restraint Was Eisenhower's Paris Stance

EXTENSION OF REMARKS

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES Friday, May 27, 1960

Mr. LAUSCHE. Mr. President, much has been written, and much has been said on the subject of the incidents leading to the collapse at the summit. Accusations and blames have been directed, and praise and confidence has been expressed. Manifestly, our own President, Mr. Dwight D. Eisenhower, has overwhelmingly been heralded both by our own citizenry and by those of other free and peace-seeking nations throughout the world, for his unwavering stand against the personalized attacks by Mr. Khrushchev.

This thought and view is ably expressed in an editorial appearing on May 20, 1960, in the Pompano Beach (Fla.) Town News.

In order that Members of Congress and others may have the opportunity to read this excellent editorial, I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIGNITY AND RESTRAINT WAS EISENHOWER'S PARIS STANCE

A phrase in one of the news-packed Paris dispatches stands out with suggestion that we pause to consider the shattering personal blow delivered to one man.

The man is President Eisenhower. The blow—deliberate and vicious sabotage of his personal dream of bringing honorable peace to this country and the world.

We need not be of his political party to offer sincerest sympathies and condolences to the supreme commander who did so much to engineer a great war victory for us and then—with the horror of it ever fresh in mind—dedicated himself to peace.

It is to be expected that the collapse of the summit conference in Paris will be used by political opponents as a shaft in weeks to come, when preelection fervor grows warm and the great parties aline their campaign shock troops.

But to their everlasting credit and his, homefront political opponents have shown the President and the world that they are Americans first, political contestants next. At this moment all of us are willing to stand up manfully and share the bitter cup with our President.

That's as it should be. His experience at Paris was less a defeat than a withdrawal into the fortress of unified Western peace doctrine with the drawbridge raised against a frenzied marauder from the steppes below.

The dispatch that sticks in mind is counsel from Paris by UPI's Harry Ferguson—"If you like Ike, now is the time to tell him

For, Ferguson says, no man ever needed consolation and sympathy more than does the old soldier "who dreamed of becoming the President of peace and in 2 terrible days * * * watched his dream dissolve in the acid of Russian invective and insult."

Well, Mr. President and General, you have more than our consolation and sympathy.

You have our deepest respect and gratitude for the great dignity and restraint exerted in our national behalf in what otherwise could have become a snarling pit of international degeneracy.

Too Much Revenue Siphoned Away From States to Federal Government

EXTENSION OF REMARKS

HON, DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. SHORT. Mr. Speaker, during the Year and one-half that I have been in Washington, as a Member of Congress, it has been most disturbing to me to Witness the never-ending stream of peo-Ple descending upon our Nation's Capital with the hope of finding someone here to solve some problem they have back home. Usually the solution they seek is financial assistance. People have learned that Washington provides the easiest source of money ever conceived by human beings and there is a great contest to see that everyone gets his fair share. Need is no criteria since John Doe feels he is just as entitled to some of his own tax dollars as Richard Roe.

Washington also uses the devious desire of matching State or local funds with Federal grants. We hear the argument that, "We cannot afford to pass up this opportunity to receive outside assistance." Overlooked is the fact that in many cases Federal specifications increase the cost nearly as much as the

Federal assistance.

We should give some thought to the reaosn for all this and it can be found in the simple fact that too much of our tax revenue is being siphoned away from the States to the Federal Government. When States have problems such as education, which we were considering here on the floor yesterday, it is quite natural that States think of Federal aid when their local source of revenue has been exhausted. Would not a most logical solution, to many of the revenue problems of States, be to return to the States sources of revenue now appropriated by the Federal Government? I am thinking specifically of such taxes as excise taxes on transportation, communications, tobacco, and so forth. Collecting this money in the States, taking it to Washington, and then returning a portion to the States that make the loudest appeal just does not seem very practical to me.

I enjoyed reading an editorial in the June issue of Successful Farming magazine which comments frankly on this subject. I commend it to all those concerned with the future welfare of this great Nation:

Years ago, groups of Americans packed up their families and household goods and headed West. These people were the leaders of what a few years later was to become a great movement. Why did these people go into this vast, unmapped wilderness? There were many reasons, but the main attraction was opportunity. Opportunity was there if a man had the foresight and the strong hands to seize it. These people wanted to be independent, masters of their own destinies.

Today, there is another movement of Americans—but in the opposite direction. This movement is to the East and the end of the trail is in Washington, D.C., the seat of our sprawling Federal Government. One reason for the movement is the same as it was for the pioneers—opportunity. But there the resemblance ends. The opportunity is of a different nature and the strong hand that seized opportunity in the West years ago seems now to have been replaced by many descendants with hands turned palms up.

It is an amazing and almost frightening experience to visit Washington today. With little effort, you will discover that great numbers of people are there for only one reason—they have a problem and they want the Government to solve it for them. It is just that simple.

I have sat and listened to many groups discuss their particular problems. Too many times these discussions are ended by someone proposing that a representative delegation go to Washington and ask for help. So, the delegation travels East only to discover that the idea of having the Government solve their problem is not a unique one. They immediately run into countless other delegations who are also asking Government to solve their problems.

Somewhere along the line, many people have gotten the idea that Washington holds the answers and that all you have to do is turn over your problems to "big Uncle" and he'll solve them. Representatives from agriculture are not alone in this belief. All segments of our economy are involved, some far more than others.

Strange as it may seem to some people, our Government did not originate the phrase, "It is r ore blessed to give than to receive." How often have you heard, "If I don't get my share, someone else will." This is certainly not an attitude that is conducive to solving problems, yet it is the attitude of many individuals and groups of individuals today. They want something for nothing—the prize without the price. There is an idea that the Federal Government does things with "free money"—that if Uncle Sam does a job it doesn't cost anything.

Is it old fashioned or naive to believe that maybe a little more work and a little less running to Washington might solve some of these problems? Admittedly, Government can and should help, but there is a difference between helping and doing the entire job. Government should do those things that we can't do for ourselves, or in cahoots with our neighbors. I have been in countries where the government does make all the important decisions for its people. It was not pleasant.

The trail to Washington gets wider and deeper each day, just as the pioneer trails did with the movement of people West—but again, there is a difference. The pioneers hit the trail expecting hard work, while today too many taking the Washington trail expect to get out of it.

DICK HANSON.

A Proud Anniversary

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, May 27, 1960

Mr. WILLIAMS of New Jersey. Mr. President, May 28 is a day of special significance to ∆rmenians and to all persons who believe that freedom should be preserved in small nations as well as large ones. On May 28, 42 years ago, the Armenians declared their independence. Given encouragement by Woodrow Wilson and others who knew of her centuries-old struggle for justice and self-determination, Armenia became, at long last, a nation. Within a very short time, however, this nation became the first victim of Soviet aggression.

Mr. President, May 28 has not been forgotten. Each year, Armenian-Americans and others keep the memory alive and vivid. An article in the Hairenik Weekly of May 19 expresses this determination in very positive terms. I ask unanimous consent that it be printed in

the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PROUD ANNIVERSARY

This is the season, the month of May, when the freedom-loving Armenians of the world will be making their customary pilgrimage to their sacred shrine. They will be observing the anniversary of May 28, the glorious day of Armenia's proclamation of her independence after six centuries of submission to the foreign yoke.

Forty-two years ago, on May 28, after a bloody last-ditch stand against their executioners, the barbarian Turks, and after having victoriously repuised them on the battle-fields of Sardarapat and Karakilliseh, the Armenians proclaimed to the world that they now were a free people with an independent homeland.

The Turk, the former tyrant now vanquished, was the first to recognize that independence, soon followed by the United States and almost all the rest of the world powers.

Today, 42 years after that auspicious event, it remains entirely to the realm of hypothetical speculation as to what actually might have happened had an industrious and creative people like the Armenians, riding on the crest of their spiritual resurgence, been allowed to work out their destiny without outside intervention. This much is certain, however, that, based upon the positive achievements of the brief span of time it was permitted to live, and assuming that the civilized nations had kept their faith, the tiny republic of Armenia would have made phenomenal strides in the task of national recovery, and today, as a proud and independent member of human society, would

have occupied a seat in the United Nations Organization, and would have been a powerful voice for truth and justice in that great

Areopagus.

The coincidence of the liberation of the Armenian people and the emergence of the Marxist-Leninist ideology which denies the concepts of freedom and national independence as bourgeois superstitutions must be regarded as the greatest irony of fate which, unfortunately, proved costly to the Armenians, because it deprived them of the fruits of their centuries of struggle.

The termination of the independent state through the joint Turco-Soviet conspiracy and the perfidy of the nations in 1920, costly as it was to the Armenians, did not, perhaps, fully comprehend the Armenian loss. Far greater than the physical loss was our spiritual loss. The Soviet takeover of Armenia brought about the great apostacy which was far worse than material considerations.

When a people lose their faith in freedom and national independence, they are indeed to be pitied, because there is no salvation for a people who part with their sanctities.

For the people of Soviet Armenia who live under the terror and are unable to give free expression to their aspirations we cherish only full sympathy. We understand their plight and we commiserate with them. We knew that, were they free to express their will, they would renounce the tyrannical regime and would choose their independence. We know that, with us, they would be celebrating the anniversary of May 28 today.

But we have little sympathy, much less patience, for those traitors to the nation who live in the free world and yet have turned their backs on their people and who fanatically support an alien regime which

destroyed their independence.

We are fully aware of the magnitude of the struggle which has engulfed the world as a result of the menace of the new ideology, and we know that there is a host of small nations like us who lost their independence to the Soviet but who tenaciously observe each year the anniversary of their independence.

We are not so naive as to believe that, because we pertinaciously cherish the memory of a day which is dear to our hearts, we shall make a dent on the fortunes of the world. The fight for freedom and independence is now out of our hands and it has become the problem of the free world.

But we are firm believers in the internal values and in the eventual triumph of right. We shall hold the fort, and we shall support the free world until the victory is won, no matter how long it will take. We shall continue the fight until Armenia's freedom is restored.

Veterans of World War I

EXTENSION OF REMARKS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mrs. GRIFFITHS. Mr. Speaker, recently a good friend and constituent of mine, Mr. G. Edwin Slater, appeared before the national Democratic platform panel on behalf of the Veterans of World War I.

Briefly and succintly, he cited the needs of our approximately 2,700,000 living World War I veterans regarding hospitalization, pensions, and social security. His statement follows: ON PENSIONS AND SOCIAL SECURITY

I appear before this distinguished panel representing the veterans of World War I, a national veterans organization chartered in 1958, and whose membership has now grown to approximately 200,000 members. We have units called barracks in every State of the Union, most of the territories and even a barracks in Dublin, Ireland. Our fast growing ladies auxiliary has a membership approaching 40,000 members.

The veteran of World War I is of the average age of more than 65 years and falls into

the category of the aging citizen of America.

The problems of the aging citizen of America today are of the greatest concern, not only to the Congress of the United States but to the people of the country generally, and it has been reliably reported that there are approximately 17 million such persons. this number, approximately 2,700,000 are the remaining ranks of the 4,791,000 veterans of World War I known as the "forgotten men of 1917-18." These are the men who fought and won the first great war which was supposed to have made the world safe for democracy. These are the men and women to whom this country once pledged that their sacrifices would never be forgotten. These are the men who fought in a war where medical and service records were not considered as important as they were in later wars and as a result their medical and service records are complete and inaccurate, leaving countless numbers unable to establish service-connected disabilities because of that fact. Remember, too, that mustard and phosgene gas were used as a weapon in World War I, and the number of those veterans whose lungs and respiratory systems were affected by gas cannot now be determined because of their incomplete and inaccurate medical records.

When the veteran of World War I was discharged on his return from service, he was only given a \$60 bonus, plus his current pay, less any deductions and returned home to start life anew. Did he have a job when he returned? Did he have 52 weeks to find a job and draw a cushion of \$20 each and every week until the time he could land a He did not. For him, there was no education and vocational training, business and farm loans, unemployment compensation and social security. His service pay, a base of \$30 per month had not permitted him to build up a financial reserve sufficient to carry him through the dips of our national economy for the next 20 years, during which period of time, he had to battle his way through panics, depressions, recessions and economy acts. During his service in the Armed Forces and after, he had consoled himself with the thought that in all previous wars, a grateful Nation had eventually compensated those men who had offered their lives in the defense of their Nation and for their economic losses sustained as a result of their military service by granting them a pension, the justification for which goes back to the days of the early history of their country when George Washington in his farewell address said:

"We hold that the legislature has the right to pass such laws as those here in question upon the theory that it is not, indeed, consistent with reason or justice, to expect that one set of men should make a sacrifice of property, domestic ease and happiness, encounter the rigors of the field, the perils and vicissitudes of war, to obtain those blessings which every citizen will enjoy, in common with them, without some adequate compensation. It must also be a comfortless reflection to any man, that after he may have contributed to securing the rights of his country at the risk of his life, and the ruin of his fortune, there would be no provision made to prevent himself from sink-

ing into indigence and wretchedness in his old age."

And in our own time, a former President of the United States, said:

"We believe that military service in time of war is extraordinary service which transcends the normal duties of citizenship and consequently entitles veterans with honorable service to special consideration."

Where was the compensation which had been afforded the veterans of other wars? Only halfhearted, inadequate, unsustained, stopgap programs of a temporary nature were started.

We must remember that for the veteran of World War I, social security deductions did not start until January 1, 1937, and for the self-employed and those engaged in agriculture not until 1955. Many therefore have not been able to build up a sizable account under the social security act, thereby limit-At his ing their benefits on their retirement. present age, the veteran of World War I is unable to obtain employment and faces his declining years with insufficient funds to provide himself with decent housing, proper nutrition, adequate medical care or necessary recreation. Today, the veteran of World War I, together with his wife, numbering nearly 5 million persons, is bitter, disillusioned and feels that the Nation is grateful to the veteran of all wars except the one in which he served.

The belief that the veteran of World War I is entitled to a pension for his war service has been expressed by the fact that 60 Members of the Congress of the United States from both sides of the House have introduced identical bills calling for the payment of \$100 per month for the veteran of World War I.

Think, if you please, what such a pension would do for the economy of America. It would relieve local, State, city, town, and governmental agencies of the responsibility of providing for relief and medical care for those men and their families. It would provide better housing, better clothing and better nutrition for the aging veteran and nearly all industry and business will directly or indirectly benefit thereby. It would tend to make economically free Americans of them and would redeem the promise of his country to take care of those who bore the battle.

You ask what would be the cost? Based on our research and on best statistics available, approximately 1,250,000 veterans of World War I would be added to the present pension rolls for a total cost of \$1,500 million and this sum will decrease at the rate of approximately \$200 million annually based on the fact that 14,000 died in January 1960 for an annual death rate of 168,000; and as time goes on, the death rate will accelerate and the cost will decrease.

ON HOSPITALIZATION

In your consideration of the hospital and medical needs of the aged of the Nation, we the Veterans of World War I ask your special consideration of our hospital medical needs. There are approximately 2,700,000 of our number alive today and of the average age of more than 65 years. We are the men and women who fought in a war where medical and service records were not considered as important as they were in later wars, leaving a countless number unable to establish service-connected disabilities because of that fact. Ours was a war in which mustard and phosgene gas was used as a weapon, materially affecting the lungs and respiratory systems; the number of those veterans affected thereby cannot be determined. These, too, are the veterans who returned from service without the special benefits received by veterans of subsequent wars to rehabilitate and establish themselves.

Please remember that the great depression struck the men and women of this group wiping out life savings necessitating their making a new start in life 20 years after their discharge from World War I. The men and women of World War I, now retired or facing retirement, who live on social security benefits and, in many cases on meager savings, cannot possibly present day terriffic cost of hospital and medical expense and cost of drugs. We are of the age group who need and require medical and hospital care, together with expensive drugs and prescriptions.

Will you compel this martyred generation of veterans, the ones who fought the first great war—the war to end all wars—and won it, to pauperize themselves in order to take care of their hospital and medical needs in their dying days? Remember the words of he who spoke, "Take care of those who bore

the battle."

Death of Noble Kahikina Kauhane

EXTENSION OF REMARKS OF

HON. OREN E. LONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES Friday, May 27, 1960

Mr. LONG of Hawaii. Mr. President, Hawaii lost one of her most devoted and respected leaders last Thursday in the passing of Noble Kahikina Kauhane. Mr. Kauhane descended from a Hawaiian family long prominent in the life of our islands. He served for the past 16 years on the board of supervisors, how called the council, of the city and county of Honolulu. His record on the council was exemplary. Despite a stroke Which he suffered in 1955, with courage and dedication to his public office he continued to serve on the Honolulu council as its senior member.

The Honolulu Advertiser and the Honolulu Star-Bulletin paid tribute to Mr. Kauhane in these editorials, which I call to the attention of my colleagues. They help express my personal feeling

of loss at his passing.

I ask unanimous consent that the editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

From the Honolulu Star-Bulletin, May 21, 1960]

DEATH OF A DEVOTED PUBLIC SERVANT

The city-county of Honolulu and the State of Hawaii have lost an able, conscientious and devoted public servant.

Noble K. Kauhane, senior member of the city council, attended two long meetings by the council last Tuesday afternoon and Tuesday night.

He died late Thursday afternoon. He had never recovered from the disability he suffered in 1955 when he was stricken with mild cerebral apoplexy. But for more than 5 years he endeavored faithfully to carry on his his public duties. His colleagues and the Voters of the island supported his painful Yet purposeful efforts.

Noble Kauhane came from a line of Hawallans prominent in their generations. He Was a descendant of alli, or royalty, and his name—Noble—was given him because a grandfather, the Reverend James Kauhane, had served in the House of Nobles, one branch of the Hawaiian Legislature.

All Hawaii can honor this kamaaina-son of the soil—and join in extending to his family sincere and deep sympathy. He has left a legacy of good deeds and stanch serv-

[From the Honolulu Advertiser, May 21, 1960] NOBLE KAUHANE

Noble Kahikina Kauhane, dean of city councilmen, was a dedicated and selfless public servant, a courageous son of Hawali with a deep sense of personal duty.

A fellow councilman paying tribute said: "His entire term of office will be a record that most probably never will be approached

for good legislative service." This is a strong statement but it is supported by a 16-year career as supervisor and councilman which sought only the public interest. From the time he first was elected to the board of supervisors in 1944, observers spoke of his steadying influence on his colleagues. And he often was their conscience.

In 1955 the onetime athlete suffered a severe stroke. His recovery was long and arduous. But he was a deeply religious man and he was blessed with a devoted, solicitous family. He went on to give 5 more years of high service to this community.

Councilman Lemke said: "Noble's loss is

going to be felt."

His is no idle tribute; it is a statement of fact. We mourn that loss and we mourn the man.

Was Nikita Influenced by Adlai?

EXTENSION OF REMARKS OF

HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. GOODELL. Mr. Speaker, an article has come to my attention which appeared in the Chicago Daily News for Tuesday, May 16, 1960. There has been a great deal of controversy surrounding the build-up to the abortive summit conference. Some of the commentators on both sides appear to be interested in exploiting this situation for political purposes. In this connection, their statements can be discounted perhaps as having been colored by the passion of the moment. But it troubles me when any comments with reference to dealing with Communist governments exhibit a naive and unrealistic conception of Communist motivations. Let us criticize openly what we each consider to be mistakes when we see them in either foreign or domestic policies. But let us not mislead our people into believing that the leaders of the Kremlin respect anything except strength in the free world. President Eisenhower led up to the summit with strength and maintained that strength and dignity throughout the flasco perpetrated by Khrushchev in Paris.

I ask unanimous consent to insert a news story at this point, which I hope does not actually reflect the views of Adlai Stevenson, one of the leaders in the great Democratic Party:

[From the Chicago Daily News, May 17, 1960] WAS NIKITA INFLUENCED BY ADLAI?

(By William H. Stoneman)

Paris.—A startling statement by Soviet Premier Khrushchev expressing hope that he could do more business with one of Ike's successors than with Ike himself is being connected by imaginative Europeans with an interview recently given to a French newspaperman by Adlal Stevenson.

In an interview published by the Paris-Presse-l'Intransigeant on Saturday—the day of Khrushchev's arrival here—Stevenson was quoted as willing to make concessions to the Russians on a number of points.

One of Stevenson's alleged statements which startled and disturbed members of the American delegation to the summit indicated that he favored concessions on Berlin in return for an agreement with Russia on cessation of atomic tests.

One concession he was quoted as favoring was reduction of American forces in West

Berlin from 11,000 to 7,000.

Of more importance was his suggestion that a disarmament accord might be sought on the basis of the Rapacki plan under which forces would be reduced by both the East and West in the area of Central Europe.

This has been opposed by the Western powers because it might involve retirement

of American forces from Europe.

Stevenson was quoted as being willing to

face this eventuality.

"I think Europeans—Germans, French, and British—should be in a position to defend themselves in Europe," he was quoted as saving.

The Weizmann Institute: Another Example of Israel's Pioneering Spirit

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, May 27, 1960

Mr. KEATING. Mr. President, one of the often overlooked aspects of the miracle that is Israel today is that country's significant efforts in the field of science. During my several visits to this bastion of democracy in the Middle East I have had an opportunity to study firsthand the tremendous work being accomplished in a number of fields by the dedicated people of Israel.

Not long ago I visited the famous Weizmann Institute of Science in Rehovat as the guest of my old friend, Abba Eban. the director of the institute and formerly the distinguished Israeli Ambassador to the United States. He is now a member of Premier Ben Gurion's Cabinet.

Chaim Weizmann was a renowned scientist when Israel was scarcely more than a dream. His trailblazing experiments helped the cause of democracy in two world wars-with munitions in the first, with fuels and synthetic rubber in the second. He left his glory behind to follow his heart to Palestine to help create, in the desert, an oasis of science, and to set the stage for the tremendous industrial growth that has flowered in that oasis.

If one visits the National Amphitheatre which adjoins Chaim Weizmann's garden-grave on the hilltop at Rehovat, one can read these words carved on a memorial tablet. They are in the words of Chaim Weizmann:

I feel sure that science will bring to this land both peace and a renewal of its youth, creating here the springs of a new material and spiritual life.

The Weizmann Institute, now 10 years old, is not a teaching institution, but a research center. Its principal building, significantly enough, is the Institute of Nuclear Science, with two stories underground and two above. Its department of isotopes has received worldwide recognition by its formulation of a new method of using radioactive isotopes to find sources of water. This has tre-mendous potential not only for Israel but for other parched-earth countries across the world.

In the department of nuclear physics a number of experts are working on projects dealing with nuclear structure for the U.S. Air Force and for our Navy. Ninety-five percent of the entire world's supply of heavy oxygen comes from the institute which supplies the needs of the United States, Britain, and practically

all of the free world.

The impressive thing about the Weizmann Institute is that it is unique in its part of the world. There is no other scientific research center between Rome and Tokyo that compares with it. It serves not only as a main factor in Israel's own industrial development problems, but its influence is certain to radiate throughout the Middle East, Africa, and Asia. Israel is the immediate benefactor of this magnificent institute, but all humanity is the ultimate benefactor.

A major part of the institute's effort is in the field of pure science. There is another great center of learning that concentrates in the field of applied science. This is the Technion, or the Israel Institute of Technology at Haifa. No less an authority than Dr. James Killian called Technion the M.I.T. of the Middle East.

At the Technion an important area of research is the technology of food and of the byproducts of Israel agriculture. But here, too, we have the entire gamut of the teaching of science, with special emphasis in all the fields of engineering. And both the Technion and the institute are supplemented by such dynamic and purposeful organizations as the Hebrew University of Jerusalem, with its faculty of science, Hadassah Medical School, and faculty of agriculture; the agricultural research station and the Israel Atomic Energy Commission at Tel Aviv.

Mr. President, in Israel, as in no other country, science has been the great tool-a tool inspired by necessity and forged by human spirit—a tool that has created, in so brief a space of years, the unprecedented economic and industrial

pheonomenon that is Israel.

A recent article in the Washington Post outlined many of the activities of the Weizmann Institute, to which I have referred. It is further evidence of the scientific progress of Israel, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 15, 1960] ISRAEL'S SCIENCE LENDING A HAND

(By Eleanor Templeton)

TEL AVIV.-"No modern statesman can afford to be scientifically illiterate." The man who expressed this conviction from behind his desk at the Weizmann Institute of Science in Israel is no stranger to Washingtonians and other Americans as a statesman. He is Abba Eban, who was for 10 years Israel's Ambassador to the United States and her Chief United Nations Delegate.

Today, back in his home country, Eban is adding to his political achievements that scientific literacy he considers so essential by serving as president of the Weizmann Institute, which is held by many to be one of the 10 great scientific institutions in the world. At the same time, as a member of the Israel Government Cabinet, he remains active in statecraft. He finds the two roles

wholly compatible.

For it is abundantly clear, says Eban, in a country like Israel-small, poor in natural resources and still counted among those new nations struggling for survival—that the need to utilize the benefits of scientific knowledge is as vital as the need to produce food. In fact, even in the production of food Israel could not succeed without the application of scientific methods, nor could any other principal phase of the economy prosper without the intensive and ingenious exploitation that only science or technology can bring about.

Actually, this principle already has been applied to such an extent in Israel that she now possesses the capacity, and the desire, to help other new nations facing similar

difficulties.

Indeed, Eban believes that among the host of awakening nations in Asia and Africa there are those whose need of an assist from science is even greater than Israel's. For in too many cases political freedom has not brought with it freedom from famine and want, or from many diseases for which cures were found long ago, or from ignorance and inexperience in applying modern technology to agricultural and industrial development,

To these nations Israel can offer a uniquely direct and effective kind of aid. Because, thinks Eban, "the pioneering momentum which marks Israel's development * * * may be more instructive for other small nations than any example which they could find in the life of rich and powerful coun-Israel has shown that "every nation-be it small and young-can develop a scientific tradition and join the scientific movement of our times."

By way of giving realistic expression to this philosophy, the Weizmann Institute is now preparing for an event in which a nice blending of science and statesmanship is admirably exemplified. This is the Interna-tional Conference on Science in the Advancement of New States, to convene at the

Institute in August.

The idea for this conference occurred to Eban while he was still on duty in Washington, but after he had been president of the Institute (in October 1958). As plans for the event took shape, there were doubts about getting a satisfactory response to invitations to attend, which were sent to some of the world's foremost scientists and to top officials of many govern-Perhaps these eminent persons would consider Israel a bit presumptuous in calling a meeting of this nature. But doubts disappeared as the acceptances came in. The roster of delegates will be a brilliant one.

The degree of this brilliance has in fact presented something of a problem—this because the scientific experience of many of the delegates is considerably greater than that which a number of the Asian-African representatives have had opportunity to acquire, and the light of this experience could prove too dazzling for some.

To avert this, there will be a serious effort to keep the proceedings on a level which will have practical meaning to delegates from the less developed countries, and to concentrate the agenda on basic problems common to new nations and societies.

These are problems of agriculture and industry, such as the development of land and water resources and unconventional sources of power like solar energy; problems of nutrition and public health; and the problem of providing new nations with scientific personnel before the educational facilities of the countries themselves can

produce such specialists.

The August gathering will be the third international congress of scientific importance to be staged by the Institute since 1956, when it was the site of the Congress of the International Union of Macromolecular Chemistry. In 1957, it was host to some of the world's foremost nuclear scientists at a conference of the International Union of Physics. This is recognition of a high order for an institution which, only a little more than 10 years ago, began expanding in order to meet the requirements of contemporary scientific reesarch and application.

Young as it may be, however, the Institute has an illustrious tradition to live up to. For it stands as a monument to the first scientist-statesman of the era in which he

lived-Chaim Weizmann.

As a scientist, Weizmann, working for the British Government during World War L made discoveries in technological organic chemistry which contributed significantly to the Allied victory. During this time, he also exhibited his extraordinary gifts for statesmanship, working with enormous effectiveness to bring about events which eventually led to the establishment of the State of Israel. He then became the new state's first president.

Weizmann had long believed that a small country like Israel had especial need of a chemical research institute in which the raw materials of the land itself could be studied and exploited. Happily, his idea was accepted wholeheartedly by devoted friends in England-members of the Marks, Sieff and Sacher families-and with their help the Daniel Sieff Research Institute was founded in 1934. It was housed in a modest two-story building in the village of Rehovoth, where a small agricultural station already existed.

There were, of course, countless difficulties and frustrations to be overcome-including such basic defects as shortages of water, gas and chemicals. Nevertheless, work at the new Institute was notably productive, and from the beginning it vindicated Weizmann's faith. So much so that a decade later, when a group of American friends asked him how they could best honor him on his 70th birthday, Weizmann had but one request: that something be done to enlarge the scope and aims of the Daniel Sieff Research Institute.

From this suggestion came the Weizmann Institute of Science as it exists today. Formally dedicated in November 1949, it now comprises a complex of seven major buildings, plus service and housing facilities. dispersed over a specious, orderly, and verdantly beautiful campus.

As for the staff, it has grown from 10 scientists to 245 (permanent and temporary). There are 60 research students in the gra uate school, which awards a doctor of philosophy degree. Technicians, administrative and maintenance personnel add another 400 workers to the total.

A number of the scientists on the staff are internationally renowned in their fields. Well equipped today with the latest and most complex tools of modern science, they have achieved outstanding results, especially in research on cancer, genetics, plastics, and isotopes. (In connection with the latter, a process developed at the institute now supplies 95 percent of the world demand for heavy water, an essential element in nuclear research.)

All in all, around 90 projects are presently underway, including assignments from the U.S. Air Force, Navy, and other American Government agencies.

This rather breathtaking 10-year advance has taken place without being a financial burden to Israel or drawing on public funds.

Monetary support comes largely from British and American philanthropists, and its flow is kept fresh and recurrent mainly by the imaginative fund-raising tactics of a former theatrical producer from New York, Meyer Weisgall, who is now chairman of the executive.

The fact is that in all its branches the institute is well endowed, even more with talent than with material means. There is every reason to expect that in the forthcoming conference this already famous scientific organization will take one more significant step toward fulfilling the role for which it was created.

This, in the words of Abba Eban, is to utilize science "not as an aim in itself, but as a tool destined faithfully to serve the nation—and the entire family of nations as Well."

Ribicoff Lauds Devon Pupils at Rededication of Revolutionary War Monument

EXTENSION OF REMARKS

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. GIAIMO. Mr. Speaker, at a time when our medias of mass communication appear to be largely preoccupied With the asocial acts of our youth, I was Breatly pleased to read a story published by the New Haven Evening Register that depicts the activities of a group of youngsters in my Connecticut community who, as Gov. Abraham Ribicoff has said, belie "the talk of the shallowness and incompetency of our teenagers." These youngsters turned to our Nation's rich heritage of history for an activity which has not only benefitted their community but, indeed, our Nation as well.

Mr. Speaker, I ask that the following article from the New Haven Register of May 25, 1960, be inserted in the Record at this point:

RIBICOFF LAUDS DEVON PUPILS AT REDEDICA-TION OF REVOLUTIONARY WAR MONUMENT

Milporn.—"Look to the students and children if you really want an explanation of our national purpose and dedication."

Several hundred youngsters and adults heard Gov. Abraham Ribicoff say that Tuesday afternoon at the rededication of Liberty Rock in Devon.

The rededication of Liberty Rock—a Revolutionary War landmark—was sparked by 30 students in the seventh grade social studies class of Mrs. Marguerite Devlin at Lenox Avenue School.

Local and State dignitaries attended the flag-raising ceremony rededicating the rock,

which is adjacent to exit 34 of the Connecticut Turnpike.

IMAGINARY TOUR

The students of grade 7-1 "rediscovered" the long-neglected site as part of a class project last fall in which students imagined they were taking Soviet Premier Nikita Khrushchev, then visiting the United States, on imaginary tours through New England.

When the Connecticut tour was mapped out, the class rediscovered Liberty Rock.

The class, led by Mrs. Devlin, then began a project to rededicate the landmark and as part of it invited Governor Ribicoff to attend the ceremonies.

Speaking at the 40-minute rededication ceremony, the Governor declared that he sits in his office day in and day out with many problems and many cares, "but with few moments of great inspiration."

However, he said, "I was inspired and thrilled by the letter" from the students on their rededication plans.

He praised Mrs. Devlin as a "teacher with imagination, understanding, and love in her heart for her pupils. How lucky her pupils are to have such a teacher."

The Governor said further that this project "belies the talk of the shallowness and

incompetency of our teenagers."

Mrs. Devlin thanked the Governor for attending and for his devotion to youth.

"You stand 10 feet tall today in the minds and hearts of my pupils," Mrs. Devlin told Governor Ribicoff.

FLAG IS RAISED

A 49-star flag, the gift of Freelove Baldwin Stowe Chapter of the DAR, was raised at the site by Priscilla Bradford, one of Mrs. Devlin's students, and Mrs. Kenneth Bissell, historian for the DAR chapter.

The flag will fly there until the Fourth of July when the new 50-star flag becomes official. Supplying the flagpole was the Devon Lions Club.

With a color guard from the Milford Nike Station present, the ceremonies were opened with an invocation by the Reverend Alfred Bradford, father of Priscilla Bradford, and minister of the Devon Union Church.

A welcome to those attending the ceremonies was given by Mary Pfeil, one of the students, who also is president of the Rock Watchers' Society.

This society will bear the responsibility of maintaining the rock and it will be passed each year to the new grade 7-1 of Lenox Avenue School.

In accepting this responsibility for the society she said, "It is our patriotic duty to accept the challenge as modern minutemen."

Another student, Louise McCaulley, gave the history of the rock.

She said scratched on the rock was the date 1766 and the name of Peter Pruden, who was a founder of the Liberty Men, a forerunner of the Minute Men.

The rock stands on the north side of Bridgeport Avenue and during Revolutionary War times was the highest point in the area.

USED AS LOOKOUT

Deep in woodland, the rock was used as a lookout point during the period when the British had brought Fairfield under fire and Devon residents feared an attack.

A metal plaque, donated by Devon VFW Post 7788, has been attached to the rock and is enscribed:

"Liberty Men 1766; Minute Men 1776; Liberty Rock DAR September 7, 1897."

The last date refers to the original dedication by the Milford DAR chapter.

A tableau scene, atop the rock, with a 13star fiag being unfolded was presented by six Revolutionary War costumed seventh graders:

David House, Norman Lofgren, Robert Williams, Peter Craig, Wayne Hawkins, and Walter Oshetski.

Accompanying fife and drum music was by Judy Pinco, Howard Pennington and Susan Henchman.

Also speaking at the affair were Mayor Charles R. Iovino, School Superintendent Joseph A. Foran, and Lenox Avenue School Principal Carl Andreas.

The benediction was given by the Reverend Gladstone Stevens, pastor of the St. Andrews

Episcopal Church, Devon.

Following the ceremonies, Governor Ribicoff was introduced by Mrs. Devlin to each of her students.

Americans Warned of Impending Water, Shortage

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, May 27, 1960

Mr. WILEY. Mr. President, the creation of ever-improved programs for utilizing, conserving, and finding new sources of the valuable resource, water, liquid gold, is essential to the future of our country.

We recall that Secretary Seaton, of the Department of the Interior, has estimated that by 1980, the United States will have to turn to ocean water for the needs of our people, as well as for water for industrial and agricultural purposes.

We recognize, of course, that we must not wait until we run out of water, before we start to do something about it. Rather, the task is now to lay constructive plans to provide us with the necessary resources of water for the time when we shall need it. For this reason, I join in sponsoring proposed legislation to carry forward the program to find more inexpensive ways of transferring saline or brackish water into water suitable for industrial and other consumption purposes.

The Congress, I believe, should give early approval to the pending legislation, S. 3447, for this essential program.

Recently, the Christian Science Monitor published an article, by Bert Collier, entitled "Americans Warned of Impending Water Shortage." The article reflects the need for a program to provide for water needs of the future; and I request unanimous consent that this article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Americans Warned of Impending Water Shortage

(By Bert Collier)

Bal Harbour, Fla.—Interested listeners at the American Water Works Association convention at Bal Harbour were warned that the United States is rapidly running out of water.

But a vast amount of research is being done.

Harry A. Farber of the U.S. Public Health Service said new tools, new know-how, and more money were being made available constantly to apply to the problem. "The number of water resource agencies and research centers is growing," he told AWWA delegates at the Americana Hotel. "They will put to work more scientists and engineers who can provide the type of research information that is needed. These are hopeful signs."

Can they come up with answers in time? They must, said Theodore M. Schad, staff director of the Senate Select Committee on National Water Resources. The need is

GREAT NEED SIGHTED

"The United States is rapidly approaching the time when we will need and use all the water we can possibly get from every conceivable source," he declared, "from the conservation of streamflow, the greater use of underground sources, the salvage of previously used waters of every sort and from the most rigorous elimination of waste in water storage, transportation, and use."

In only 20 years, said Mr. Schad, at least 5 of the 22 water resource regions into which the United States has been divided for the committee's study purposes will have water needs exceeding the supply, even with wholesale reuse.

"This will necessitate the importation of water from other river basins," he said, "or the making of decisions as to which uses would have to be forgone.

DAMS AND RESERVOIRS

"Furthermore, the 17 more adequately watered regions face the need to build systems of dams and reservoirs for virtually complete control of riverflows such as only the more arid regions of the West have experienced. This nationwide study of water needs versus supplies, the first of its kind ever made, tells us that we are approaching a strange, new day in our land when we must create a planned sufficiency of water, rather than passively enjoy a natural abundance of the resource as in the past."

Studies of the Senate select committee indicate, said Mr. Schad, that the national water needs by 1980 will approximate the 600 billion daily supply which some experts estimate is the present limitation with present techniques. It represents about half the total outflow of all the Nation's rivers.

"The answer is that we are going to have to use our available waters over and over again," he said, "cleaning it up each time just as we send our dirty shirts to the laundry."

PLANNING ACCEPTED

"If our water development is planned wisely, we should have a sufficient amount in most places, though not all the things people will want to use water for."

This projects us 20 years into the future.

Beyond that, who knows?

Equally as important as total supply is state of water systems which supply the Nation's communities. Raymond J. Faust, AWWA secretary, reported that 57 percent of all distribution systems need improvement, presenting a capital need estimated at \$5 billion.

Considering that only between \$400 million and \$500 million was spent last year, said Mr. Faust, "the industry has been retrogressing in its ability to meet its needs."

ESTIMATES CITED

This critical demand for improvements comes at a time of tremendous expansion. Estimates are for a national population of 285 million in 1980. Most of this growth, however, will be dependent on public water systems.

systems.
"It is conservatively estimated," said Mr.
Faust, "that \$16,500 million will be needed
to provide water to this increased population."

Combined plant deficiencies and expansion needs conservatively will call for \$1,060 million a year for 20 years.

But this isn't the end. "Perhaps the greatest challenge of all is that of quality water," said the AWWA official. "Today very few supplies in this country qualify as quality water."

Mr. Faust estimates that plant construction and other improvements to insure quality water would cost about \$15 a person served, or a total of \$1,900 million.

Putting these three needs together, and projecting them for 20 years means, said Mr. Faust, that the water industry in the United States is faced with an annual construction job of \$1,115 million.

"The water industry has met and conquered many challenges in the past," he said. "For this the industry can rightly receive a hearty well done. Nonetheless, its largest problems lie ahead. I hope we are prepared to meet them."

Dedicated Ladies of the National Council of Jewish Women

EXTENSION OF REMARKS

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. HALPERN. Mr. Speaker, as a Member of this House—the core of free, representative Government—and cognizant of the rights and responsibilities of our free system, I try as much as possible to keep abreast of issues through the varied media of research, of public expression and viewpoint, and through resolutions and statements of our numerous public-spirited organizations and groups.

In the carrying out of this objective policy, I constantly come into contact with many fine organizations—one of these is an outstanding body of dedicated ladies—the National Council of Jewish Women. Through personal meetings with its representatives on national as well as local levels, and through analyses of the council's legislative program, I have been impressed by the enthusiasm, public spirit and dedication of these women.

I thought it most appropriate to describe their outstanding work to the House and, in so doing, bring to the American people thorugh the forum of its Congress a summary of the council's admirable activities.

The National Council of Jewish Women has a membership of 110,000 women in 240 sections throughout the country. Organized in 1893, the council has devoted its energies to a program of service, education, and social action to stimulate the individual and the community to advance the democratic way of life. It is dedicated, in the spirit of Judaism, to the well-being of Jews and their neighbors of all faiths, in American communities, in the Nation and throughout the world.

The council's interest in education, in social and economic advancement, in government, is identical with the interest of all Americans who are resolved to live in freedom and to build on the demo-

cratic foundation of our country. The dignity of the individual, the importance of the family, the liberty to believe and to speak without restraint or coercion, are part of the Jewish faith as well as of our American heritage.

Councilwomen sponsor—sometimes by themselves, sometimes working with religious and civic organizations of other faiths—more than 900 community services throughout America for better education, health, and welfare.

Through an oversea program, the national organization trains professional and volunteer leaders for the welfare and educational services in Israel and other Jewish communities abroad.

The women contribute their efforts on a voluntary basis, and their programs have encompassed many fields—education, juvenile delinquency, the elderly, housing, immigration, mental health, civil rights and liberties, and welfare services, particularly in undermanned communities.

The council has provided services, centers and motor corps projects for severely handicapped children. It has sponsored teenage recreation centers. It has provided job placement services and workshops for the elderly. It has helped to organize citizens' housing councils in communities as a means of alerting public awareness to pressing housing needs.

These and many other outstanding services of the council have fully merited for it the national recognition which it has justly received.

Correlative with its great programs is the spirit reflected in the resolutions adopted by the council at its 23d convention in Los Angeles. Defining the council's position on important public issues, they form the basis for the council's program of study and action. Encompassing American foreign policy, economic policy, government, human rights and democracy, individual and social welfare, immigration and naturalization, Israel, Judaism, Jewish life, public education, and women's rights, they assert the membership's belief in the fundamental strengths of the democratic life.

In promoting the spirit and practice of democracy, of service, of brotherhood, the council has contributed magnificently to the development of our great traditions of free government.

Ground Breaking Ceremonies for Century 21 Exposition

EXTENSION OF REMARKS

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES
Friday, May 27, 1960

Mr. MAGNUSON. Mr. President, a few short days ago Seattle, Wash., witnessed the ground breaking ceremonies for the Colisesum 21 Building, a key part of the mammoth science display

which will be opened to the world on April 21, 1962.

On that occasion, many notables of our generation had an important part to play, both in arranging the program and carrying it forward.

Gov. Albert D. Rosellini of Washington State played a major role. So did former Seattle City Councilman Alfred R. Rochester, now executive director of Century 21 Exposition Commission.

But we from Washington State can never forget the words uttered that day by Dr. John P. Hagen, Director, Office for the United Nations Conference, National Aeronautics and Space Administration.

The enormity of scientific achievement already made and the challenge still confronting us is made clear in Dr. Hagen's address. I ask unanimous consent that Dr. Hagen's address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Speech at the Official Groundbreaking Ceremony Coliseum Century 21, Century 21 Exposition, Inc., Seattle, Wash., May 12, 1960

(Dr. John P. Hagen, Director, Office for the United Nations Conference National Aeronautics and Space Administration)

(Acknowledge person introducing, pay respects to Governor of the State of Washington and other dignitaries present.)

We are here today to assist the State of Washington and the city of Seattle in their preparation to recognize the heritage of the Past, to pay tribute to the technological revolution of this century, and to take a long look forward to the hopeful promise of century 21. In this age of technology, more than in any other time in our history, tomorrow's achievements are made possible only by today's discoveries.

Time telescopes today's living. Our ancestors learned to dig from the earth energy from the sun arriving millions of years ago and stored in the form of fossil deposits of coal. The coal age took 2,000 years to develop.

A major revolution occurred when James Watt discovered a means to convert the thermal energy of burning coal to mechanical energy. His steam engine, once perfected, was put to all sorts of tasks in new industries and in transportation. With the introduction of steam, our scale of living was vastly increased. The coal age had taken 2,000 years to develop—the steam age now took 100 years for its development.

Not more than 20 years ago scientists, working in laboratories in many countries, probing at the atom to learn its secrets, developed techniques which made it possible to discover the means to unlock the atom and release the tremendous energies contained therein. This had its first use unfortunately as an instrument of destruction, but now is hopefully being turned to peaceful uses. The coal age took 2,000 years, steam 100 years, but the nuclear age took only 20 years to develop.

Within the last few years, we have learned how to overcome the forces of gravity, have established stations in space and are engaged in an aggressive program to take advantage of this new capability to expand our knowledge of the universe, to prepare to explore the nearer objects in the solar system and to bring them into our zone of experience. The coal age took 2,000 years, steam 100 years, nuclear 20 years, and now in less than 10 years the space age has become a recogniz-

able factor in today's pattern of life. Time is indeed telescoping today's living.

So it is with the Pacific Northwest. The groups in this area were admitted as States to the Union less than two generations ago. Now this is one of the fastest growing areas in the United States—almost twice the rate of national growth. This is a tribute to the energy, the courage, and the wisdom of the people and its leaders both here and in the Nation's Capital.

Century 21 is the century of hope. Man, if his wisdom controls his desires, has it within his power to remold the world.

Look back a moment at century 19. We see a picture of a world containing vast, fertile, unoccupied areas, a world living in a partially agrarian existence and a world whose inhabitants could look forward to a short life span.

But now at the middle of century 20, the world finds itself in a population squeeze. Because of scientific and technological improvements in health and sanitation, we have increased birth rates and longer life expectancies. According to the U.S. census, the birth rate in the United States alone is equivalent to creating the population of a new city of 35,000 persons each day. This sudden filling of the earth has created a demand for a degree of order not earlier required.

In century 20 the productivity of the individual has increased and along with this has come an increase in the average consumption of goods and services. Communication and transportation have been revolutionized so that the world has become closer knit. Seattle was rebuilt in 1889 after a destructive fire. Every spot in the inhabited world today is more accessible to the people of Seattle than New York and Washington were in those days.

What can we foreseen for century 21? There is the pressing need for the expansion of means to satisfy the physical needs of food and shelter for our growing population. We must expand our capabilities for taking care of the intellectual needs of our children and of ourselves through better schools and universities and through better facilities for adult education. Most importantly, we must do more in planning and thinking and doing in satisfying our spiritual and moral needs. The fast changing world presents us with new and unforeseen situations which try our nature and force us to make decisions which can only be right if based on a strong spiritual and moral background.

What could be more fitting than to explore the 21st century? What could better epitomize the spirit of the Pacific Northwest than to portray for all the world to see and hear the dynamic, forward march of a confident America.

Today we break the ground for the century 21 exposition in which private citizens and the State and the Federal Government joint hands to chart the future. Inded we recognize that the expansion of America cannot stop with the arrival of yesterday's settler nor with today's newborn. Indeed, man's urge to grow physically, mentally, and spiritually compels him to explore upwards into space itself. What peaceful uses does the exploration of space hold for us?

We live here on the surface of the earth and stretching out above us is the atmosphere containing the oxygen which supports our life. The atmosphere serves as a shield between us and the atomic-sized missiles and the strong ultra-violet and X-ray radiations that fly about through space. While the atmosphere protects us, it also denies us the opportunity to study these radiations and to see the universe in its full splendor.

We have now overcome this barrier and can send our observing instruments into space. In the past 2 years we have made a significant advance in the knowledge of the universe in which we live and we in the United States can take pride that we with our space effort have led in the expansion of scientific knowledge. We now know more about the true nature of interplanetary space and with Pioneer V are learning new things each day. We know more about the shape of the earth and the structure of its atmosphere and with Vanguard I are still improving this knowledge. We have begun to apply this new technique to bring real advantages to your way of living. Thros I, the meteorological satellite, has demonstrated and is still demonstrating that, by observing the worldwide weather picture in a way that was never possible before, we can design and put into space systems which will make possible a great improvement in our understanding and prediction of the weather.

We are on the verge of conducting an experiment, called Echo, with a 100-foot satellite sphere. This experiment, if successful, will pioneer a means to vastly improve long-distance communications. We think of a future possibility of instantaneous worldwide communication through this medium in space.

It is our place to continue the scientific program directed toward the expansion of our knowledge of the physical universe and to convert this knowledge through technology toward the improvement of our everyday living.

We are planning toward the exploration of the solar system. Pioneer V, now more than 8 million miles from the earth and still sending back scientific data, is our first real step in this direction.

We will next probe the moon and the nearby planets with unmanned vehicles observing them with television and sampling their surfaces. Life may well exist in one form or another elsewhere in this universe. One of our greatest achievements will be to determine if this is so. Out of this exploration could come better understanding of the secret of life itself and a better understanding of the origin of our solar system and universe.

A social and moral reawakening is needed. Man is only a temporal creature. He is but one possible organism in one of many worlds, in one of many solar systems, in one of many galaxies. Man has always been afraid of his new inventions and has been perversely adamant about adapting himself to the new and technically more advanced environment he creates. This problem has been more severe in this last 50-year span, with more advances coming in this one generation than came in all the centuries since the Dark Ages. This extends from the very small to the very large. In this generation, we have unlocked the atom and have found there things such as electrons, protons, and neutrons that we can only partially describe with mathematics, but we do not understand these things in the sense that we understand the thing, "chair" or "table." We have begun to map our own galaxy of stars and, where once we were impressed with its immensity, now we blithely think of it as one of many hurtling at tremendous speeds through space space whose boundaries we have never seen and perhaps never hope to

Man will have to grow spiritually to reap the benefits of century 21 and to adjust himself to the new way of life.

Never before in the long pages of history has man become so conscious of his power of self-destruction and of his lack of power of re-creation. It is but an accident of time and place that genetically he exists at all.

As he faces century 21, let him be unafraid of the new technology. Let him grasp the new concepts of time, space, and matter—and that from these elements and his faith in his fellow man—he will leave an enriched heritage for those who follow him.

Corps of Engineers' New Dredge Commissioned

EXTENSION OF REMARKS

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. MINSHALL. Mr. Speaker, on May 17, the U.S. Army Corps of Engineers' new \$10 million dredge, the Markham, was commissioned in the Port of Cleveland. The distinguished guests for this occasion were the Honorable Wilber Mr. Brucker, Secretary of the Army, and Lt. Gen. Emerson C. Itschner, Chief of the Corps of Engineers. An armada of ships wearing the flags of many nations sail the St. Lawrence Seaway, and maintaining and improving the facilities for transportation via the Great Lakes-St. Lawrence navigation system is of paramount importance both nationally and internationally. The Corps of Engineers is to be commended for their role in making this fourth seacoast a reality, and under leave to extend my remarks, I am pleased to present to my colleagues the text of the speeches of Secretary Brucker and General Itschner at the commissioning ceremonies:

REMARKS BY LT. GEN. E. C. ITSCHNER, CHIEF OF ENGINEERS, U.S. ARMY

Today we pass another milestone in the more than a century and a quarter of civil works activities by the U.S. Army Corps of Engineers on the Great Lakes.

A new dredge has been commissioned into service that is larger, more modern, and able to do a better job, than any dredge we have previously used on the Great Lakes.

The Markham is a completely new ship, designed by the Corps of Engineers, and constructed, under contract, by Avondale Marine Ways Inc., of New Orleans. It has cost a little more than \$10 million. This modern plant will be able to handle three times the quantity of dredged material in its hoppers as could the largest dredge heretofore used by the Corps of Engineers on the Great Lakes. There will be significant savings in time and money.

We are signally honored today by the presence of the Secretary of the Army. The Honorable Wilber M. Brucker is well known on the Great Lakes, as a distinguished son of Michigan and former Governor of that State.

As Secretary of the Army, Mr. Brucker has been a vigorous and consistent supporter of the civil works program of the Corps of Engineers, because he knows well the great contribution this peacetime program makes to the wartime strength of the Army he proudly heads. It gives me the greatest pleasure to introduce to this gathering, the Secretary of the Army, the Honorable Wilber M. Brucker.

REMARKS BY THE HONORABLE WILBER M. BRUCKER, SECRETARY OF THE ARMY

It is a pleasure to take part in these ceremonies commissioning a new U.S. Army dredge. It is named the Markham in honor of the late Maj. Gen. Edward Murphy Markham, Chief of Engineers from 1933 to 1937, and it will supply a pressing need for more modern dredging equipment in the essential task of maintaining connecting channels and harbors of the extensive Great Lakes-St. Lawrence River navigation system. I know that General Markham, one of the

foremost contributors to the Corps of Engineers proud tradition as a leader in civil works projects, would be proud that his name has been given to this vessel which represents another forward step in engineering efficiency.

General Itschner has described how the Markham will add to the speed and effectiveness of dredging operations here, and we shall all look forward to the benefits

expected from its use.

The need to find new and better ways of doing our work has always been one of the driving forces behind the U.S. Army, and the Corps of Engineers has been particularly outstanding as a pioneer of new methods and developments. For almost 185 years, the Corps of Engineers has had a special place in the American march of progress as an agency to which soldier and civilian alike could look for leadership, advice, and assistance in carrying out major technological tasks.

The Corps' role today typifies its traditional service to our country. It is the primary engineering and consultation agency in our world-wide system of national defense in an age when technological capability is a matter of decisive importance to military power. Here at home the Corps of Engineers is also charged with the responsibility for assuring that the development of our water resources will support the requirements for the economic expansion which is so vital to our survival.

Here on the Great Lakes, new vistas are opening up. With completion of the St. Lawrence Seaway, this northern border has become in truth the Nation's fourth seacoast. Cleveland and the other harbors on the lakes have become or will become world seaports. Local governments and private enterprises are beginning to improve their port facilities in order to take full advantage of the vast new opportunities for growth and the expansion of commerce. The Federal Government, through the Army Corps of Engineers, also in conducting surveys, making plans, and beginning construction to provide improved navigation channels, more modern locks, and other facilities.

With so many governmental and private agencies contributing in such a manner, we can all look forward confidently to a future of expanded commercial and shipping activity which will bring increased economic growth to the entire region.

There is an important national security aspect we must also keep in mind. This inland sea, stretching 2,300 miles from Duluth to the St. Lawrence Gulf, provides a channel into the Nation's heartland which is free from the threat of enemy submarines,

Iron ore for steel, a key strategic material in war, can continue to move from our midwest ore deposits. Labrador ore also can move upbound through the Seaway and Great Lakes to America's steel manufacturing centers.

If war should come again—and we devoutly hope it will not—this shorter, more protected oversea route will facilitate the shipment of men, munitions, and other wartime supplies eastward, and will increase generally the war goods production potential of the whole mid-continent area.

I am proud that the St. Lawrence Seaway went forward to reality during my tenure as Secretary of the Army, and I should like once more to congratulate the Corps of Engineers for doing it again when called upon to design and construct the United States portion of the project. Such developments will have even greater and more far-reaching benefits than we can now calculate. They prove once again that our progress is limited only by our energy and vision.

In the hope and confidence that this new dredge, the Markham, will contribute im-

measurably to the continued improvement of our vital Great Lakes-St. Lawrence River navigation system, I now commission it in the service of the U.S. Army and the Nation at large.

Problems of Migratory Farmworkers

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES
Friday, May 27, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the migrant worker in the United States today often experiences hardship, danger, and exclusion as he travels from one State to another, from one crop to another, each year. In many parts of the Nation, however, he also experiences something more—community concern about the problems which face him and members of his family.

The Senate Subcommittee on Migratory Labor spent 3 days in southern Florida last week, and there we saw evidence of this community concern in abundance. We heard from educators who were appalled at the difficulties encountered by children of the migrants. Members of the migrant ministry told us about efforts to give some meaning to the few leisure hours of the workers. A professor described an all-out response by government and citizens to alleviate hardships during this year's freeze. In other States the subcommittee has heard similar testimony. It has become increasingly obvious that any Government effort to help the migrant must have the understanding and support of private groups and individual citizens. That understanding is gradually increasing. The subcommittee has received much help from witnesses who believe that well-planned Federal programs can be helpful to those who deal locally with individual problems faced by the migrant.

A most perceptive editorial in the May 28, 1960, Saturday Evening Post, describes one of those problems. In its final line it sums up the basic challenge. It says: "What is most needed now is that the country recognize the existence of the problem."

Mr. President, I ask unanimous consent that the Post's excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

CHILDREN OF MIGRANT WORKERS POSE A

From your car or bus or train, as you move through one or another part of the country, you may sometimes see men and women and even children working in the fields. These may be among our vast number of migratory farmworkers. They are absolutely needed for the heavy seasonal demands of agriculture. But they are now a problem.

First of all, what about the children? It is reckoned that there are 500,000 adult migratory workers and 100,000 children. Not only do many of the children work in

the fields at an early age, but the great majority get very little schooling. Suppose a child is in school for 3 weeks in one place, and then the family moves on to work in another State. How can children's studies in one State be coordinated with their studies elsewhere?

As for the adults, they generally have a hard life. Secretary of Labor Mitchell calls them the "excluded Americans." Their anhual earnings are low, and housing and sanitary conditions are often unpleasant. The Federal and State governments give financial protection of different kinds to most workers, but the migrants nearly every-Where are left out in the cold. They are frequently barred from a community's health and school facilities.

Their employers are often called exploiters. This sweeping charge is unfair. Nobody with a knowledge of human nature will be astonished to hear that some growers are indifferent to the welfare of the migrants. But Senator Harrison A. WILLIAMS, of New Jersey, chairman of the Subcommittee on Migratory Labor, finds encouraging efforts by some growers to provide good housing despite slim profit margins.

Seasonal farmworkers are to be found in all our States. In some they are few; West Virginia has only 130. But 16 States have more than 10,000 each . Texas has 95,000, California 60,000, Michigan 46,000, New York 28,000.

Gov. David L. Lawrence, of Pennsylvania, has told the Senate subcommittee that migrants pick one-fourth of his State's fruits and vegetables. He urges Federal laws to protect them, arguing that a State cannot be expected to raise its farmers' costs higher than those in other States. Senator WIL-LIAMS proposes to begin with a modest pro-"States and localities," he says, "cannot absorb large numbers of migrant children into their existing, educational systems for relatively brief periods of the year." urges that the Federal Government provide matching funds to help defray the added expense during the regular school session.

The whole matter is very complex, and there are practical barriers. What is most there are practical barriers. needed now is that the country recognize the

existence of the problem.

Government Services and Assistance to the Domestic Minerals Industries

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. ASPINALL. Mr. Speaker, on May 19 there was addressed to me by Gerald D. Morgan, the Deputy Assistant to the President, a letter transmitting a compilation of the activities of Government agencies affecting the domestic minerals industries. The information submitted by Mr. Morgan is not a complete answer to the request of the Congress contained in House Concurrent Resolution 177, 86th Congress, 1st session, but it contains useful information bearing on pending legislation, and suggests the need of additional legislation.

Under leave to extend my remarks in the RECORD, I include the letter and enclosure from Mr. Morgan:

THE WHITE HOUSE, Washington, May 19, 1960.

The Honorable WAYNE N. ASPINALL, Chairman, Committee on Interior and In-

sular Affairs, House of Representatives, Washington, D.C. DEAR MR. ASPINALL: In view of the House

Concurrent Resolution 177 of last year, you may be interested in the attached compilation of reports by the various Government agencies on their several activities affecting the minerals industries of the United States. Sincerely.

GERALD D. MORGAN. The Deputy Assistant to the President.

ENCLOSIDE

Section 1 of House Concurrent Resolution 177 requested reviews of existing programs of the departments and agencies of the executive branch for the purpose of increasing the activity of the domestic mining and mineral industries; advice on actions taken or proposed toward this end; and submission of any necessary reorganization plans or legislative recommendations.

A survey of several Government agencies reveals that many programs of the Government provide services and assistance to the domestic minerals industries and to mining communities. A few of these render di-rect assistance; most of them have an indirect effect: their total contribution is substantial. Any modification of such programs would, of course, have to be consistent with the primary objective for which they were established.

It has not been possible to explore all of the factors contributing to unemployment in mining communities nor to review in detail all of the programs of the Government which might be used to assist in some way. Programs which have been reviewed are primarily those which help areas of persistent unemployment to create new job opportunities, those which benefit small business concerns, and those which contribute generally to economic growth and stability.

STOCKPILING

Under the strategic stockpiling program (Public Law 79-520), substantial quantities of many materials were purchased from domestic mines. These purchase programs helped to maintain a high level of production for much of the mining industry. In some instances, mining camps that had been shut down were reopened, and even new mines were opened up. This program is now practically completed, and stockpiling requirements largely met. The stockpiling program, however, is under continuous re-

DEFENSE PRODUCTION ACT

The stockpiling program has been supplemented by domestic mineral production programs conducted under the Defense Production Act of 1950, as amended. This act provides all needed authority for any additional programs that might prove necessary for the maintenance of a satisfactory level of domestic metal and mineral production for defense.

Although plant-expansion programs for mineral production ended with the fulfillment of stockpile needs, the Government is still under contract to purchase from two producers such copper as cannot be sold on the market. These are new enterprises whose creation was connected with a Government program, one employing 2,600 workers and the other 1,200 workers. At one, the San Manuel enterprise in Arizona, a whole new community has sprung into existence.

Proposed legislation to amend and extend the Defense Production Act of 1950 will be transmitted to the Congress at an early

URANIUM

The uranium industry of the United States was created in response to the Federal atomic energy program. While sufficient reserves have been developed and stocks accumulated to lead to an easing of this program, many mining camps, with their ancillary community activities, continue active. In 1959, almost 7 million tons of ore were treated, employing 3,185 workers in addition to those engaged in mining and transportation; plant investment in the industry totals more than \$156 million.

MINERAL EXPLORATION

The Department of the Interior administers a program under Public Law 85-701 whereby the Government participates financially in the cost of mineral exploration in the United States. If mineral reserves are found and a mining enterprise created, the Government's financial contribution is returned in the form of royalties on production; otherwise, no repayment is required. This program is designed particularly for the small miner. The program was reviewed in late 1959, and the Office of Minerals Exploration in the Department of the Interior is being reorganized in order to improve the program.

RESEARCH IN MINING AND EXPLORATION

The Department of the Interior through the Bureau of Mines and the Geological Survey conducts a continuing program of research on exploration, mining methods, processing, utilization of low-grade ores, new uses for metals and minerals, and similar items. Work by the Geological Survey has had a direct influence on discovery and creation of new mining activity; examples are, the discovery of rare-earth deposits in California, zinc in Tennessee, and lead in Wisconsin. The work of the Bureau of Mines on titanium has been directly responsible for the creation of a titanium industry in the United States. The Bureau's work has also helped create an industry for zirconium and hafnium, both needed in atomic energy. The oil shale program of the Bureau has advanced the possibility of a new industry to the point where it is now a matter of competitive economics. The programs of these offices are under constant review and revision toward the end that American mineral resources make their maximum contribution to the American defense and economy.

COAL RESEARCH

The Bureau of Mines conducts extensive research to develop new or improved techniques that will assure wise utilization of coal. Much of this research is of mediumand long-range character. In order to provide for desirable research oriented toward development of immediate new uses, the administration has endorsed legislation that would give the Department of the Interior authority to contract for coal research. This is embodied in H.R. 3375 now pending in the

CONSERVATION OF HELIUM RESOURCES

The consumption of helium has increased fivefold since 1950. Its use in industrial and medical research, and its essential military uses make it increasingly valuable. The known supplies of helium are limited. Nevertheless, some four billion cubic feet of helium are wasted annually as the natural gas containing helium is consumed.

The Department of the Interior has requested legislation to conserve 32 billion cubic feet of helium. H.R. 8440, H.R. 10548. and S. 3376, and other similar bills, have been introduced and hearings held. It is hoped that a satisfactory measure can be approved during the present session of the Congress.

EXPANSION OF EXPORTS

Under the leadership of the Department of Commerce, and with interdepartmental assistance, a comprehensive program to increase exports is being undertaken. Meascontemplated or underway include stimulation of domestic business interest in the exports market, providing greater detail on a product basis of foreign demand, arranging for greater development and wider dissemination of trade leads, and increased activity by the Foreign Service on behalf of U.S. business in foreign sales efforts. Furthermore, special studies of foreign markets, including those for iron and steel products and aluminum, are about to be made for the benefit of industries concerned. These activities will be supplemented by an expansion of existing programs for distribution of foreign market surveys and foreign dispatches covering market developments.

In addition, meetings with some 40 industries are being held to obtain suggestions regarding measures which would serve to expand exports. Consideration may be given to suggestions for easing foreign risks resulting from acts of foreign governments. Such meetings are not scheduled for the extractive industries but joint sponsorship of them with the Department of the Inte-

rior might be arranged.
Since producer and consumer durable goods form a large portion of exports and since these items involve substantial quantities of various types of metals, the extractive industries would benefit ultimately from any increase in exports resulting from these activities.

AREA ASSISTANCE

The Office of Area Development of the Department of Commerce carries the principal responsibility for providing Federal assistance to area development groups in their efforts to strengthen the economic bases of their communities. An illustration of its direct assistance to mining is its work with the Anthracite Institute. Its help to the institute in presenting to Government fuel experts the economic advantages of anthracite-using equipment in Government installations brought about a substantial increase in anthracite sales. The major contribution of the area assistance program, however, would be to those mining communities which face the task of providing new job opportunities in new industries.

The Committee on Interior and Insular Affairs in its report on House Concurrent Resolution 177 emphasized the widespread effects of mine shutdowns and depressed domestic mineral production. These range from business failures and blighted communities, to a general depressing effect on the national economy and a threat to national security. The decline of ore grade, the increased productivity of labor in mining and milling, the changing character of industrial demand for mineral raw materials, and the fact that mines inevitably play out often mean that a mining community must increase and diversify its economic opportunities if it is to hold its people.

The Office of Area Development provides a variety of technical services to help communities in this endeavor.

The Department of Labor also aids community organization with on-the-job training, and the Small Business Administration provides financial assistance.

Legislation is needed to strengthen these programs. H.R. 4278 is designed to enable the Federal Government to stimulate and complement the efforts of communities to help themselves, to promote maximum participation by private financial institutions and by State and local agencies to encourage the creation of new job opportunities, and to provide technical aid for the diversification of single-industry communities.

Programs of the various Federal agencies in this area are under the continuous review and coordination of the interdepartmental Committee to Coordinate Federal Urban Area Assistance Programs.

SMALL BUSINESS

A substantial segment of the American mining industry is composed of small business concerns. For this reason, the Small Business Administration has been asked to review its program with special reference to small mining establishments. Many small but efficient mines are now closed because their capital was insufficient to enable them to survive the period of low prices of the past 2 years.

The Small Business Administration is authorized to make loans to business enterprises, including mining companies, in accordance with the provisions of the Small Business Act. Loans may be made by the agency to finance business construction, conversion, or expansion; to finance the purchase of equipment, facilities, machinery, supplies, or material; and to supply working capital. The Small Business Administration attempts to aid the mining segment of the ecoonmy in every way possible by the extension of sound loans to eligible applicants.

Since the inception of the agency through March 1960, the following loans have been approved to industries classified as mining:

Type of business	Number of loans approved	Amount
Metal mining	11 49	\$692,000 5,392,000
Crude petroleum and natural gas production or extraction	84	6, 830, 000
Mining and quarrying of non- metallic minerals, except fuels	187	9, 373, 000

The Government's programs affecting small-business concerns were subject to review by a Cabinet Committee appointed May 31, 1956. Many of the problems dealt with by this Committee are problems of the domestic mining industry. The Committee's recommendations, especially those relating to Federal taxes, should improve the economic conditions of many small mining industries.

SPECIAL TAX PROVISIONS

There are several major tax relief provisions that are available exclusively to taxpayers in the natural resources industries. These provisions are the percentage depletion allowance; the permitting of the deduction of exploration and development expenditures; the exclusion from gross income of certain grants to taxpayers by the Federal Government to encourage exploration, development, and mining of critical and strategic minerals; the treatment of coal royalties under certain conditions so as to give rise to capital gain rather than ordinary income; and the limitation on the amount of tax which may be imposed in the case of a sale of oil or gas properties.

No recommendations are offered at this time for legislation to modify these provisions.

AGRICULTURAL BARTER

The barter program of the Department of Agriculture has at times provided considerable assistance to the domestic mining industry. By removing spot surpluses of metals and minerals from world markets, the barter program has helped stabilize world prices.

Unfortunately, it is not always possible to provide this assistance. The barter program has as its objective the increase of exports of agricultural commodities. Minerals and metals can be accepted in exchange for agricultural commodities only where

such action increases foreign purchasing power and channels the use of that purchasing power to the purchase of agricultural commodities from this country.

An interdepartmental committee is responsible for advising the Secretary of Agriculture what minerals may be listed for barter.

FORMAL REVIEWS OF MINERAL PROGRAMS

Programs directly affecting the minerals industries have been reviewed in considerable detail over the past 6 years.

In 1954, a Cabinet Committee on Minerals Policy made a comprehensive review of pertinent existing legislation and Government programs developed pursuant thereto. The recommendations of this Committee have largely guided the administration's policies and programs during the past 5 years.

The report of the Cabinet Committee on Minerals Policy was complemented in 1955 by the report of the President's Advisory Committee on Energy Supplies and Resources Policy.

These reports and recommendations led to several important developments in programs affecting the minerals industry.

The strategic stockpile was strengthened by the establishment of long-term objectives, later changed to maximum objectives.

The Office of Minerals Mobilization was created in the Department of the Interior. The Office of Defense Mobilization delegated to this office the task of conducting a continuing and systematic commodity-by-commodity analysis of the mobilization base for all of the strategic minerals.

A review of the tax structure led to further consideration by the Congress and the approval in the 1954 Revenue Code of a number of revisions in depletion allowances and other revisions in the tax structure affecting the minerals industries.

The committee recommended and the Congress later enacted legislation to provide a permanent program of financial assistance to private industry for exploration.

to private industry for exploration.

The research work of the Geological Survey and the Bureau of Mines was accelerated by increased appropriations.

The mining laws were revised to make possible a greater use of the public domain. A Government fuel-purchasing policy was

developed.

The program of voluntary curtailments of oil imports and later the present program of import quotas on both crude oil and oil products were established.

LONG-RANGE MINERALS PROGRAMS

During 1956 and 1957, several extensive reviews were made within the administration of Government programs specifically affecting the development of domestic mineral resources. These reviews were for the purpose of enabling the Secretary of the Interior, in behalf of the administration, to lay before the Congress any legislation needed to bring about long-term improvements in domestic mining.

These reviews took the form of discussion by representatives of the major governmental agencies concerned and a formal review by the Advisory Board on Economic Growth and Stability, a consultative body of the Council of Economic Advisers.

Several legislative proposals grew out of these reviews but only one recommended measure was actually enacted by the Congress. This was Public Law 701, 85th Congress 2d session, a bill to provide financial assistance to exploration. This action had been previously recommended by the Cabinet Committee.

Proposals to provide a sliding-scale excise tax on lead and zinc and incentive payments to stimulate production of certain minerals were not exacted by the Congress.

were not enacted by the Congress.

In connection with the development of these long-range proposals, the Secretary of

the Interior reviewed with congressional committees the status of all important mineral commodities, providing summaries of salient data for each commodity.

SPECIAL STOCKPILE ADVISORY COMMITTEE

The Special Stockpile Advisory Committee was established October 31, 1957, to advise the Director of the Office of Defense Mobilization on the adequacy of the Government's Policies and programs for stockpiling Strategic materials.

The committee was under the chairmanship of Holman P. Pettibone. Its report, submitted January 28, 1958, reviewed in considerable detail the Government's stockpiling Program and offered several recommendations.

These recommendations have been taken into account in the Government stockpile planning.

TARIFF COMMISSION REVIEWS

Two investigations by the Tariff Commission, reported in recent months, furnish excellent reviews of three mineral commodities: fluorspar, lead, and zinc. These are being reviewed within the administration and recommendations will be transmitted to the Congress if indicated.

OTHER COMMODITY ANALYSES

The Department of the Interior has completed a review of developments in 1959, commodity by commodity. A summary of the salient features of this review, "Minerals and Metals Commodity Data Summaries," is attached.

CONTINUING REVIEWS

Machinery of continuing reviews includes numerous interdepartmental committees, Among those whose work is most directly concerned with the mineral industries and the economies of mining communities are: Committee to Coordinate Federal Urban Area Assistance; Advisory Board on Economic Growth and Stability; Interdepartmental Committee for the Soft Coal Industry; Helium Policy Group; Interagency Materials Advisory Committee.

SUMMARY

Many activities of the Government directly or indirectly affect production and employment in the minerals industries. The domestic and foreign trade policies of the Government, the provisions of the Internal Revenue Code, the actions of the Securities and Exchange Commission, the Federal Power Commission, and other regulatory bodies, the mining and mineral leasing laws, and the mobilization programs for the country's security are among those which perhaps most directly affect the minerals industry. These programs cannot be quickly altered to provide special assistance to the minerals industries without distorting the objectives for which they were initially established. Certain agencies are giving particular consideration to the minerals industries to see whether their programs might be pointed more sharply toward assistance to these industries.

For example, in connection with the new export promotion program, the Department of Commerce is giving special attention to minerals and to manufactured products which are fabricated from domestically mined metals.

The Department of Commerce is also reviewing its services to depressed areas to see whether programs, in cooperation with States and local communities, could be strengthened to attract new industries and create new job opportunities in mining communities.

The Small Business Administration is reviewing its services to the mining and minerals industries and making a special effort to bring its program to the attention of the mining industry.

Interngency groups operate to keep under continuous review the stockpiling program and the agriculture barter program. The Department of the Interior maintains a comprehensive and continuing appraisal of the Nation's mineral position with respect to both domestic resources and foreign supply. It also reviews annually its basic research and development programs designed to achieve an orderly and wise use of the Nation's mineral resources. In the long run, what lies beneath the surface of the earth, and man's ingenuity in discovering and extracting it, will determine the economic health of American mining.

Attention should also be called to several measures now pending in the Congress which have been proposed or strongly endorsed by the administration.

The enactment of legislation to conserve the Nation's helium resources is of paramount importance.

The pending measure (H.R. 4278) to strengthen programs of aid to depressed areas in a sound manner is directed specifically to some of the problems described in the report of the Committee on Interior and Insular Affairs to accompany House Concurrent Resolution 177.

The enactment of H.R. 3375 would add significantly to the contributions which research can make in strengthening the coal industry.

The extension of the Defense Production Act, together with necessary amendments, is also essential.

In the course of continuing reviews of programs effecting minerals industries, additional legislation will be offered in specific cases where indicated.

Mutual Security Aid: Appropriations Still Needed

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, May 27, 1960

Mr. WILEY. Mr. President, in the aftermath of the Paris meeting, during which Mr. Khrushchev torpedoed world hopes of progress toward peace, we are still attempting to assess the real meaning of the tough line adopted by the Soviet Union.

In the face of threats and the brandishing of missile-nuclear power by the Soviet Premier, however, we cannot afford to sit by quietly awaiting a decision by the Communists as to just how world affairs will be conducted in the days ahead. Instead, we must: First, continue our relentless, dedicated efforts to find a peaceful solution to the differences arising among nations, particularly between the East and West blocs; and, second, at the same time we must take a new look at our defenses, as well as our overall free world security system.

Through the years, the mutual security program, of course, has served as the backbone of our allied defenses. In the face of the continued—and perhaps greater—belligerency by the Communist bloc, can we afford to let the foundation crumble? Definitely not.

The mutual security program, by a wide consensus, recognizably has provided us with more powerful defense, deployed in strategic places, than could

otherwise be obtained from expenditures in other ways.

Wisely, the Congress proved, for the most part, the authorization of additional funds requested by President Eisenhower for strengthening this program.

Currently, the appropriations bill is before the Foreign Aid Subcommittee of the House Appropriations Committee.

In the face of the Communist effort to try to humble us before the eyes of the world, this would be a poor time, indeed, to cripple this significant program which undergirds the strength of the Western World.

Recently, I was privileged to participate in a public service program, sponsored by the AFL-CIO, on the need for continuation of a strong mutual security program.

At this time, I request unanimous consent to have two items printed in the Appendix of the Record: First, excerpts of my interview with Harry W. Flannery, Radio Coordinator of the AFL-CIO program; and second, an editorial, from the Christian Science Monitor, entitled: "Aid: Appropriations Still Needed."

There being no objection, the excerpts and the editorial were ordered to be printed in the RECORD, as follows:

WASHINGTON REPORTS TO THE PEOPLE—AFL-CIO PUBLIC SERVICE PROGRAM

MUTUAL SECURITY NOW A MUST

Mr. Flannery. And now to the office of Senator Wiley in the Old Senate Office Building. Senator Wiley, what is the outlook for extension and expansion in the mutual security program. It's been a long and contro-

versial issue in the Halls of Congress and

the country.

Mr. Whey. Well, as you know, Congress approved—and wisely, I believe—authorization for over \$1.3 billion in additional funds for mutual security, raising the ceiling to over \$4 billion as requested by President Eisenhower. That action, I believe, speaks for itself. We recognize, of course, that getting approval of appropriations is far more than mere authorization. Through the years, however, the mutual security program has proved to be the backbone of the allied defense—helping to "hold the line" against Communist aggression in Greece, Turkey, Iran, Laos, Korea, Taiwan, and elsewhere in the world.

Mr. Flannery. Do you feel, then Senator, that the rumored \$1 billion cut in appropriations is not likely to materialize?

Mr. Wher. I am not a prophet. I recognize, of course, that this is an election year. Consequently, it would be even more difficult than usual to predict what Congress will do—if that is possible at all. However, I think new conditions in Europe have made it almost so that the appropriations will go through. Overall, I expect Congress will act in a responsible way in providing the needed money for the program.

Mr. Flannery. What effect, if any, do you feel the Khrushchev sabotage of the summit conference will have on congressional action on the program. We've already touched somewhat on that. Would you say anything further on that?

Mr. Wher. Yes, the renewal of the tough Stalinist line—as evidenced by Khrushchev at the Paris meeting—will, I believe, add new emphasis to the need for maintaining strong, effective cooperation among the free world nations to "hold off" Communist aggression.

The Khrushchev tantrum in Paris provided one more bit of evidence that the East-West struggle—rather than diminishing—will in all likelihood continue sharply on all fronts in the future.

Mr. Flannery. Do you see any need for farreaching changes in the mutual security

program

Mr. Wh.ey. We recognize, of course, that the program needs flexibility in channeling efforts and money to spots of special need or crises. The military, for example, provides the front line of defense. For the long run, however, economic, technical, and similar types of assistance will prove equally valuable. For illustration, the technical assistance programs help the people of less-developed nations to live better; to wipe out disease, poverty, and starvation; to eradicate the trouble spots of unrest by the have nots; incidentally the targets for Communist infiltration.

These programs can do much to brighten the outlook and hasten the achievement of independence, especially for the newly emerging nations; too, it will create better standards of living, and capability for making a contribution to world betterment by the less developed nations, particularly in Africa,

Asia, and Latin America.

Naturally, too, we must keep a watchful eye on how the money is handled. Over the years, the mutual security program has received endorsements of enlightened lead-

ers of both political parties.

Incidentally, organizations like the AFL-CIO are doing a splendid job—not only in supporting the program—but also in creating great public understanding of the need for the program as well as its operation and purposes.

Mr. Flannery. A new part of the program within recent years is the Development Loan Fund. I imagine you consider this as a very important part of the program too.

Mr. Wher. Yes; we should see that money is loaned where it can really create production that is needed in that nation.

Mr. Flannery. And as a result, not only provide for our defense but for the improvement of the world as a whole.

Mr. WILEY. Well, that's the objective.

Mr. Flannery. Overall, then, you feel that a continuation of the program is essential

to our security?

Mr. Wher. I certainly do. The program reflects a realistic effort to fulfill our responsibility as a world leader; in addition, it represents self-interest in providing our Nation with greater protection at less cost than could otherwise be obtained.

Overall, the money earmarked for the mutual security is a good investment in peace, defense, and stability of the world for the

future.

Recognizing that communism is a great and powerful force, that will not, one night, magically disappear; we must gear our programs to live with, and supercede in accomplishment, the Communist system.

I am confident we can do the job successfully.

Mr. Flannery. Thank you very much, Sen-

Mr. Wiley. Thank you, sir.

Mr. Flannery. These interviews were with Senator Alexander Whley, Republican, of Wisconsin, and Senator John Sparkman, Democrat, of Alabama. To keep up to the moment on major issues before Congress, your moderator, Harry W. Flannery, invites you to be with us each week at the same time as your radio station and the AFL-CIO bring you Washington reports to the people.

[From the Christian Science Monitor, May 23, 1960]

AID: APPROPRIATION STILL NEEDED

Year after year attention has to be called to the difference between "authorization" and "appropriation" in connection with providing funds for the U.S. mutual security program. Congress on May 12 completed passage of the Mutual Security Act of 1960 authorizing appropriation of \$1,366 million for defense support, technical cooperation, special assistance and other programs in addition to \$2,720 million of authorizations for military assistance and the Development Loan Fund carried over from previous years. The uninitiated might assume that this

The uninitiated might assume that this made the money available. But not so. Actually not 1 cent of this money can be spent until it is included also in an appropriation duly passed by both Houses of Congress, after consideration by their committees and signed by the President.

When President Elsenhower signed the authorization bill he expressed a hope that Congress would show "the same high degree of responsibility" in voting the appropriations for which it had paved the way.

Two weeks earlier he told a dinner gathering in Washington that trends were developing in this connection which were profoundly disturbing. He referred to "groups strategically situated in Congress," notably in the Appropriations Committee of the House of Representatives, which have proclaimed it as their purpose to slash these "foreign aid" appropriations by more than a billion dollars.

This would mean a 25 percent cut in a program that corresponds to approximately one-tenth of the national defense budget or one-twentieth of the total Federal budget. Even much lesser cuts, the President implied,

would raise grave problems.

Today it is being reported that sentiment in Congress since the breakdown of the intended summit conference at Paris inclines toward a strengthening of American defenses. This could easily become a mistake if it took forms which conveyed an impression that the United States was becoming more warlike or aggressive.

It could also become extravagantly expensive if it concentrated on armaments to be built and operated by the United States alone. But the mutual security authorizations include \$2 billion of carryover for military assistance to countries allied with the United States. This money, often multiplied many times over by the contributions of those countries to their own defense, assists them in keeping their military establishments up to date.

In addition, there is defense support for exposed nations carrying a heavier defense load than their resources will sustain. And technical assistance which expresses America's friendship even to nonallied countries whose understanding means much in the free world's contest with communism.

Altogether, it would be difficult to see where America, through Congress, can make a better investment in security and good will than by making full appropriations for the aid program that Congress has authorized.

A Letter by William Bernard to Washington Young Friends, an Organization Opposed to Military Service

EXTENSION OF REMARKS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. BROYHILL. Mr. Speaker, I should like to take a few minutes to read to my colleagues a letter addressed to the so-called Washington Young Friends, an organization which recently sent a letter to thousands of young, impression-

able boys in the Greater Washington metropolitan area urging them to attend meetings of the group, to become conscientious objectors, and to refuse military service under a provision of our Selective Service Act exempting from military service persons who are conscientiously opposed to participation in war because of religious training or belief

Mr. William Bernard, the young man who wrote the response I shall read, is now completing his junior year at Washington and Lee High School in Arlington, and is active in athletics as well as being an excellent student. He is vitally interested in world affairs and in the activities of our Federal Government, and plans to study law in one of our Virginia universities after graduation.

Mr. Bernard has a summer laboring job in Alaska, and is looking forward to working in our newest State and assisting in the financing of his future education. I believe he is a fine example of American youth, and that the sentiments he expresses in this letter are worthy of note by all who are or might be persuaded to become conscientious objectors merely to avoid meeting an obligation they owe this great Nation. The letter follows:

ARLINGTON, VA., May 4, 1960.

WASHINGTON YOUNG FRIENDS,

Washington, D.C.

GENTLEMEN: Today I received your letter urging me to become a conscinctious objector and I hasten to reply that I will be 18 on June 2 of this year and I am proud to be able to sign up for the draft and to enlist in the Marine Corps and its reserves. Unlike you I pray that I may serve my country and humanity, not that I may destroy my country and the dignity of man.

You say that one loses some of his freedom while in the military service. Having a rather conservative outlook upon life, I too am worried about the loss of freedom and individual liberties but I can also see a bigger picture—one of tyranny. Is it not better to give up temporarily a small morsel of freedom to your country than to give it all to the international Communist conspiracy?

We are faced with the gravest problem in the history of the world for if Russia wins all mankind loses. Communism corrupts all phases of society and totally destroys them, economically, socially, politically, and

morally.

You say wars are useless and I agree but how would you like to live under Hitler. Mussolini, Stalin, Khrushchev, or any other sadistic, tyrannical, blood-and power-thirsty dictator? When backed into a corner by a despotic society there comes a time when freemen must fight or die if not for themselves for future generations. How could we have stopped Hitler, Mussolini, and Tojo without a strong efficent military?

Your philosophy urging revolt against the draft cannot serve our country, the world or even religion. Since when has God helped those who won't help themselves?

You say it is wrong to kill and I agree but is it right to throttle the world with tyranny, slave labor and firing squads in order to seifishly refuse to serve our Republic and human dignity? Don't forget who the world's champion butchers are; Stalin and Mao Tse-tung.

No thinking freedom-loving person wants to kill anyone or battle anybody without a good reason. But, when Pearl Harbor was attacked what were we to do? When somebody pulls a knife on you what are you to do? When a country declares war on you again and again for over 40 years and the philosophy has done the same for nearly a hundred years do you love them and forget their name is Judas?

Communism must be defeated to have civilization, religion and mankind for none of them exist in a true and honorable form under communism. There is an old saying fight fire with fire and how can we serve liberty by placing it upon the chopping block and giving the enemy a sharp ax?

Patrick Henry once said, "Peace, peace when there is no peace," and also, "Give me liberty or give me death."

I am a conscientious objector to everything that sells our free Republic short. Very truly yours,

WILLIAM BERNARD.

The Summit Meeting

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, May 27, 1960

Mr. WILEY. Mr. President, this morning, the Secretary of State, the Honorable Christian A. Herter, appeared before the Foreign Relations Committee and gave a very illuminating statement. I understand the statement was first released to the press.

I believe this statement by the Secretary of State and the President's remarks of the other evening, over the radio and television, give the complete story. From these two statements, the people of America can obtain all the facts necessary to be had in connection with the socalled flasco at the summit which was caused by Khrushchev.

I ask unanimous consent that the statement by the Secretary of State be Drinted in the Appendix of the RECORD.

There being no objection, the state-ment was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE HONORABLE CHRISTIAN A. HERTER, SECRETARY OF STATE, BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE, FRIDAY, MAY 27, 1960

I. THE GENESIS OF THE SUMMIT A. The threat to Berlin

In order to understand what happened in Paris we need to look back over the preceding 18 months.

In November 1958, the U.S.S.R. began a strategy directed toward altering the situation in Berlin and East Germany in its favor. If the Western Powers refused to give up their present position in Berlin and make West Berlin a so-called free city, the Soviet Union stated its intention to proceed unilaterally at the end of 6 months, turning over full sovereignty to the so-called G.D.R. and thereby confronting the Allies with the alternative of capitulation or resort to force which would be met by Communist force.
Though the strategy as it unfolded proved to be more flexible than its original statement, it is still the official policy of the U.S.S.R. Its force lies in the Soviet ability to threaten Berlin, where we are morally committed but physically exposed.

The Western Powers, of course, promptly rejected the Soviet proposal and reaffirmed their determination to stand by Berlin.

In the months that followed, while the U.S.S.R. elaborated and pressed its strategy, the Western Powers concerted their plans meet it. They sought to engage the U.S.S.R. in negotiation, thereby clarifying its intentions and either attaining solutions acceptable to the West or, as a minimum, convincing it that unilateral action against Berlin would not be sound.

B. Engaging the U.S.S.R. negotiation

It was by no means a foregone conclusion that the U.S.S.R. would negotiate on an acceptable basis. In January 1959 the U.S.S.R. proposed a conference to adopt a peace treaty with the two parts of an indefinitely divided Germany. The Western Powers continued to maintain that a peace treaty could be negotiated and signed only with a unified Germany, hence that the reunification of Germany must be settled first. They also maintained that the only proper solution for Berlin lay in its becoming the capital of a unified Germany, and therefore they were unwilling to discuss Berlin as an isolated issue. But the U.S.S.R. had held for some time that reunification was solely the business of the Germans and therefore refused to discuss it.

The West persisted during February and March in its efforts to get the Russians talking somehow. It proposed a meeting of Foreign Ministers, with the prospect of a possible summit meeting when due preparations had been made. The U.S.S.R. had repeatedly indicated a desire for one since 1956. Finally a compromise agenda, which did not prejudice the substantive views of either side, was adopted for a foreign ministers' meeting and a date was set in May, shortly before the expiration of the original Soviet deadline for meeting their arbitrary demands on Berlin.

C., Foreign ministers' deadlock

During the intensive preparations for the meeting the Western Powers developed a new version of their basic position regarding Germany, which was submitted at Geneva as the Western peace plan. It consisted in approaching the unification of Germany through a series of stages, thereby offering the U.S.S.R. a chance to adjust its position gradually to the eventual loss of its hold on East Germany which free elections would presumably bring. The plan showed flexibility and imagination; it appealed to world opinion, but its rejection by the U.S.S.R. was nonetheless flat. The U.S.S.R. stuck adamantly to its previously announced proposals for a peace treaty with a divided Germany. Thus the basic positions remained totally unreconciled.

Finding no progress possible on Germany, Western Powers and the U.S.S.R. explored the possibility of an interim agreement on Berlin which, without contemplating a basic solution of Berlin as a separate issue, would do something to mitigate difficulties which the U.S.S.R. professed to find there. Though some progress was made in this direction, the U.S.S.R. insisted on language which would have implied the eventual erosion of the Western position in Berlin. Accordingly, despite the labor of 3 months with only one short adjournment, the Foreign Ministers' meeting ended in deadlock.

D. High-level trips

The failure of the Foreign Ministers' meeting did not result in a war crisis, however, because a parallel train of events had meanwhile brought hope in a different direction. We took the opportunity of Mikoyan's visit to the Soviet Embassy here in January to arrange informal exchanges of views between the Soviet leader and top U.S. officials. This was followed in June and July by further visits and exchanges of Kozlov to this country and the Vice President to the U.S.S.R.

The fact that these visits took place without public incident and made possible somewhat more realistic communication than usual with the Soviet leadership seemed to offer a possibility—only a possibility, of course—that means of avoiding war and eventually getting Soviet-Western relations into some what less dangerous shape might be found by developing these informal contacts.

Accordingly, the President decided to go ahead with a move which he and his advisers had long had in mind when the time seemed right. He invited Chairman Khrushchev to visit this country, and the visit was an-nounced before the Foreign Ministers ended their Geneva meeting.

During that visit no progress was made, or indeed expected, on resolving outstanding problems, but a somewhat greater degree of mutual understanding was seemingly tained, particularly on the need to settle international questions by peaceful means rather than by force. There was also a suspension, later publicly acknowledged, of whatever was left of the Soviet ultimatum on Berlin.

E. Preparation for the summit

After the Khrushchev visit it was judged feasible and desirable by the Western Powers to move toward renewed discussion, this time at the summit. Some flicker of hope for progress on Berlin had appeared at Camp David, whereas Geneva had ended in deadlock. During his American visit Khrushchev had also evinced an interest in the equally vital field of disarmament, and even though disarmament talks were to start in the Committee of Ten at Geneva it was felt that Khrushchev might reserve his constructive moves, if any, for the summit.

Accordingly, after due consultations among the Western heads of government an invitation to a summit was sent to Khrushchev and accepted by him, and after some difficulty over earlier dates the time was finally set for May 16. This move found broad support in Western public opinion.

There ensued an intensive and protracted series of preparations on the Western side. involving repeated meetings not only of the Foreign Ministers and of NATO but even of the heads of government. Within our own Government we also studied most carefully the possibilities of making progress not only on Berlin and Germany but most particularly in disarmament, as well as other aspects of general Soviet-Western relations.

At the December meeting of Western heads of Government a consensus emerged that the May summit might be only one of series of such meetings, and that it would be largely exploratory. Some modest progress was hoped for, but no major solutions on any front. But if a beginning could be made, the series of talks, possibly in a grad-ually improving atmosphere over the years, might do substantially more.

F. Summit prospects dimmed

In the first weeks after the Khrushchev American visit there was a general improvement of atmosphere and people began talking, partly in hope, partly in some confusion, about "detente." There were comparatively conciliatory speeches on each side; there was progress in the test-ban talks at Geneva; was progress in the cest-ban talks at Geneva; a new Soviet-United States cultural agreement was signed November 21, and on December 1 the United States, the U.S.S.R., and other powers signed the Antarctic Treaty.

But clouds began to gather even then, One of the earliest signs was the strong Soviet protest on November 11 against West German plans to build a broadcasting sta-West Berlin. Another was tion in Khrushchev speech on November 14 which was harder in tone, boasted again of Soviet missile prowess, and began a concentrated attack on Adenauer and the German Federal Republic which later increased and seemed to be a central feature of Soviet presummit tactics. The reason for this attack is still a matter for speculation. Perhaps they thought it would undermine the Western position on Berlin by helping to divide the Western Allies. It had no such effect of course, but naturally rallied us to speak out in defense of our German ally.

Khrushchev as early as December 1 also began repeating his threats to sign a separate peace treaty with East Germany. He repeated these threats in his speech to the Supreme Soviet on January 14 and in his remarks during his visit to Indonesia and other countries in January. On February 4, the Warsaw Pact powers issued the first formal blocwide commitment to sign a separate GDR peace treaty. Thus Khrushchev's threatening Baku speech of April 25, though it was the most sweeping since February 1959, was only a harsher version of what he had been saying for months before. I shall make full documentation on his speeches available to the committee.

Not until April did we reply at length to this mounting crescendo of Soviet statements. We did so in order to keep the record straight—notably in the speeches of April 4 and 20, which Khrushchev attacked for starting arguments that he in fact had begun.

The unity of the four Western Powers on Berlin meanwhile presumably signaled to the U.S.S.R. that prospects for eroding the Western position or obtaining Soviet terms on Berlin remained slight. President de Gaulle and other leaders were quite firm in discouraging expectations on this front. The NATO Council in Istanbul May 2-4 also reaffirmed the Western position on German reunification and regretted Soviet refusal to discuss specific practical measures of disarmament. Thus as the summit drew near the prospects for important agreement seemed slender, so long as the U.S.S.R. remained committed to driving the Western Powers out of Berlin and to discussing disarmament in terms of general principles rather than concrete steps.

The Western outlook consistently remained, however, that the summit would be worthwhile. It would afford an opportunity for an exchange of views which would clarify each side's position; it might contribute to some reduction of tensions over Berlin and narrow some of our differences on disarmament. It could be at least a small first step in a long process of improving Soviet-Western relations.

II. THE U-2 INCIDENT

On May 1 occurred the unfortunate failure of an intelligence mission. The U.S.S.R. at once seized on it to complicate the approach to the summit. With regard to the role of the U.S. Government in this matter, I cannot hope to improve on the lucid and straightforward account which the President gave to the Nation Wednesday night. I will, therefore, not attempt to go into detail, although I am of course ready to answer questions concerning my responsibilities.

Here I would only like to reemphasize four central points which stood out in the President's account:

- 1. The U-2 program was an important and efficient intelligence effort. We knew that failure of any mission under this program would have serious consequences but we considered that the great benefit derived justified the risks involved.
- 2. The decision not to suspend this program of flights, as the summit meeting approached, was a sound decision. Conditions at a later season would have prevented obtaining very important information. There is never a "good time" for a failure of an intelligence mission. We believe it unwise to lower our vigilance because of these political negotiations.

3. Initial statements by the U.S. Government properly sought first of all to protect the pilot, his intelligence mission, and everything connected with it that might still be kept secret. But when it became clear that plane and pilot were in Soviet hands we believed the Congress and the American people should be given the facts. Thus up to May 7 U.S. statements followed the general line of the cover story, and thereafter were adjusted to the situation as it developed.

4. Since the U-2 system had been compromised, it was discontinued as any other intelligence mission would be in such a case. Announcement of its discontinuance was withheld until the President could convey

the fact personally in Paris.

Based on these four points, I believe most Americans will agree that the main course of our actions, given what we knew at any particular time, was sound. In particular, I have doubts that any alteration in the language of U.S. statements would have made any difference in the arbitrary Soviet demands which followed.

III. THE EVENTS IN PARIS A. Narrative

I should like to give you an account of the major developments at Paris. I shall be as brief as possible, since the details have been widely publicized. But I would like to tell you of those events which in my opinion had a detriment effect there, and particularly those which influenced the decisions of the President.

On my arrival in Paris on Friday, May 13, there was already considerable speculation at the news that Mr. Khrushchev was arriving in Paris on Saturday rather than on Sunday, the day on which the President and Mr. Macmillan were due to arrive.

Mr. Khrushchev's statement on arrival at Orly Airport gave no indication of his subsequent position. It was mild in character and conveyed the distinct impression that he would proceed with the summit conference despite the U-2 incident. Subsequent events showed that this was deliberately designed to conceal his real purpose.

On Sunday at 11 a.m., at his request, Mr. Khrushchev, accompanied by Foreign Min-ister Gromyko and Marshal Malinovskywhich is in itsself an unusual procedure which I shall revert to later-called on President de Gaulle at the Elysée Palace. During this meeting he left with President de Gaulle a memorandum setting forth the conditions which would have to be met by the United States before Khrushchev would be prepared to attend a summit conference. The French delegation provided a copy of this memorandum to the American delegation early that afternoon. The memorandum was subsequently presented by Mr. Khrushchev, without change, as the opening part of his statement to the four-power meeting on Monday morning, May 16.

After visiting President de Gaulle Sunday morning, Khrushchev called on Prime Minister Macmillan at 4:30 p.m. on the same day and read the same statement of position to him.

The copy of the statement received from the French delegation was, of course, the subject of immediate consultation with the President and with members of the American delegation as to its significance and meaning.

It was our general conclusion, subsequently borne out by the facts, that the position and totally unacceptable demands set forth in this document had been drawn up in Moscow prior to Mr. Khrushchev's departure. In this sense it represented a fixed Soviet governmental position from which even Mr. Khrushchev would not have the authority to depart while in Paris.

I might digress here to observe that it had been our experience at previous conferences with the Soviets, at least since the death of Stalin, that the Soviet representative, no matter how highly placed he might be, was bound by the collective decisions on basic policy matters made prior to his departure from Moscow. Any substantive changes in these positions apparently required reference back to Moscow before they could be undertaken.

I should like to emphasize the opinion which was thus unanimously arrived at in the American delegation, since it bore directly upon the position which the President took at the meeting on Monday morning.

It was out of the question, of course, that there should be any acceptance by the President of the humiliating and arrogant conditions of Mr. Khrushchev. We had very much in mind, however, the importance of showing the world that it was Mr. Khrushchev, and no one else, who was placing this summit

conference in peril.

The President, therefore, decided before the Monday meeting that the proper course of action, consonant with the great responsibility which he bore and the seriousness of the issues which were to have been discussed at the conference, was for him not to engage in vituperation with Mr. Khrushchev but to demonstrate the restraint and dignity which was incumbent upon the office he holds and which befitted the leader of a great country.

In connection with this decision, the President resolved to announce to the conference his previously taken decision to suspend further flights of U-2 aircraft over the Soviet

Union.

Although the original intention had been to restrict the first meeting of the conference at the summit to the chiefs of state and heads of government and their interpreters, the President, on learning that Mr. Khrushchev wished to bring Foreign Minister Gromyko and Marshal Malinovsky, asked Secretary Gates and me to accompany him to this meeting.

I do not need to describe this meeting in detail beyond saying that Mr. Khrushchev read a statement which, with interpretation, took fully an hour. He read this entire statement from a prepared text before him. The first part of this statement was the memorandum which he had left with President de Gaulle, plus certain additions which were in the same vein as regards the United States and which referred to Soviet willingness to hold a summit conference within 6 to 8 months. The major addition was the cancellation of the invitation to the President to visit the Soviet Union.

Apart from his statement, which was made public, the President only once joined in the ensuing discussion—in order to make clear to Mr. Khrushchev and his colleagues that the suspension of the U-2 flights was not merely for the duration of the conference but for as long as he was in office.

The balance of the discussion at this meeting, which I should point out was the only during the entire period in Paris at which the Soviets were present, was largely devoted to attempts by President de Gaulle and Prime Minister Macmillan to dissuade Mr. Khrushchev from the irrevocable step of publishing his abusive statement, whose unacceptable conditions would render impossible any conference at the summit, and to Khrushchev's adamant insistence that he would publish this statement and do so at a time of his own choosing. The meeting broke up on the basis of a suggestion by President de Gaulle that the conferees should reflect on this matter for 24 hours and then examine the situation.

This meeting completely confirmed our conclusion of the night before that Mr. Khrushchev was operating within the fixed limits of a policy set before his departure from Moscow. It is significant in this connection that the statement he issued later that day, Monday, May 16, which was identical with the one he had made at the Con-

ference, took no cognizance whatsoever of the discussion at the conference, and in particular of the President's statement concerning

the suspension of U-2 overflights.

The rest of the proceedings in Paris were anticlimactic. It was apparent to all the Western representatives that there was no possibility of a summit conference short of a changed position on Mr. Khrushchev's part. On Monday Mr. Macmillan visited Mr. Khrushchev in a fruitless effort to persuade him to withdraw his impossible demands.

On that same day President de Gaulle decided, with the agreement of the President and Prime Minister Macmillan, to call a session of the summit conference for 3 p.m. on Tuesday, May 17, which was after the 24-hour recess which he had proposed on Monday. He sent invitations in writing to the three other participants.

The President, in accepting, made clear his view that acceptance by the Soviet repre-sentative would mean that the Soviets had abandoned the demands which the President had previously found completely unaccept-

able

Mr. Khrushchev did not show up at the appointed time for the Tuesday meeting. After a great deal of telephoning between the Soviet Embassy and the French Foreign Office it became clear that he was refusing to attend a summit conference and would only join in what he termed a preliminary meeting to ascertain if conditions could be created for a summit conference. By this reference to 'conditions" he obviously meant the acceptance by the United States of all of the conditions he had set forth previously, and indeed he so stated in a written communication to President de Gaulle later that same day.

In the light of Mr. Khrushchev's refusal to attend the summit conference, except on terms which all three Western representatives deemed unacceptable, the three Western heads of government met briefly at 9:30 p.m., on May 17 to approve the final tripartite communique, a copy of which I should

like to insert in the record.

Thus the summit conference was ended by Soviet intransigence before it began, without addressing the great international issues with

Which it was supposed to deal.

The following day, Wednesday, May 18, was marked by tripartite meetings of the Western heads of government and their Foreign Ministers to consider the situation. In these meetings we sought to analyze the reasons for the Soviet attitude, prospects for the future, and the measures that the three Western Powers might adopt.

This day was also marked by Mr. Khrushchev's press conference, which was fully reported by press, television, and radio. It was apparently an unparalleled performance of vituperation, abuse, and loss of temper. It should be noted, however, that despite the apparently uncontrolled nature of his remarks and actions at this press conference, Mr. Khrushchev was very careful not to commit himself to any specific course of action in the international field.

B. Analysis

We have naturally given a great deal of thought to the reasons for this extraordinary action by the Soviets in coming all the way from Moscow to Paris for the sole purpose

of sabotaging the conference.

I should like to say right off that there are many obscure aspects of this Soviet behavior and that we do not know all considerations and factors which went into its determination. We probably never shall. I hardly need to emphasize here to the members of this committee the complete secrecy in which decisions are arrived at in the Soviet Government and in the hierarchy of the Communist Party, which is the effective ruler of that country. It is only possible to try to deduce from Soviet actions, after they are taken, the considerations which brought them about. What I give you now, therefore, is at best a tentative estimate of why the Soviet Union behaved as it did. an estimate which may have to be revised in the light of further information and future

There is one thing, however, that can be regarded as certain: This is that the decision to wreck the conference was made prior to Khrushchev's departure from Moscow. At no point during his stay in Paris-neither when he disclosed his true intentions to General de Gaulle at 11 a.m. on Sunday the 15th nor subsequently-did Khrushchev deviate 1 inch from his demands that the United States (1) denounce the overflights. (2) apologize to the Soviet Union, (3) punish those "directly responsible," and (4) promise not to repeat these flights. Neither the statement made by the President at the one meeting held on Monday nor the serious and responsible efforts of General de Gaulle and Mr. Macmillan in bilateral talks with Mr. Khrushchev before and after the President's announcement of suspension of flights could persuade him to withdraw these unacceptable demands. Indeed, it is a logical deduction from his behavior in Paris that he had no authority to modify his position to any significant degree.

The fact that he was accompanied everywhere, and literally everywhere, by Foreign Minister Gromyko and Marshal Malinovsky is an interesting sidelight on this point. There is much speculation as to this change from his previous attitude during his visits both to the United States and France, when he insisted upon having meetings alone with the President and with President de Gaulle. with only interpreters present. The best guess as to the significance of this new factor is that (1) in view of the brutal and threatening attitude he adopted at Paris it was considered desirable to have some tangible evidence of Soviet armed strength in the person of Marshal Malinovsky. Secondly, Gromyko and Malinovsky would be able to testify upon return to Moscow that he had stuck strictly to the agreed position.

It also seems certain that the decision to cancel the invitation to the President was made before Khrushchev left Moscow.

As to what led the Soviets to this extreme position, in regard to the summit meeting which had previously appeared so much desired by Mr. Khrushchev, we enter into the realm of pure speculation, as I indicated earlier. The most we can hope to do in the absence of reliable information is to evaluate the elements and factors which appear to have entered into this decision. I shall try to list them briefly.

1. There was considerable indication, particularly during April, that Mr. Khrushchev had concluded that there was little likeli-hood of his having his way, particularly in regard to Berlin, at the summit. Evidence of Western determination and unity on this point in speeches and statements by Western leaders appears to have brought him to this conclusion. Thus in his Baku speech on April 25, he not only reiterated with the utmost finality his position on Berlin, including his intention to conclude a separate peace treaty with the East German regime, but he also began for the first time seriously to cast doubts upon the success of the summit. By this, of course, he meant success on Soviet terms.

2. Although the evidence is highly inconclusive, there are a number of indications that Mr. Khrushchev's conduct of Soviet foreign policy, particularly his overperson-alization and in Communist eyes overcommitment through personal visits to the United States and France, was arousing at least serious questioning if not opposition in the Soviet hierarchy. It would seem a logical deduction that some of the opposi-tion to his conduct of foreign relations which was openly voiced by the Chinese Communists found a sympathetic response among some of his associates, and very probably among the Soviet military.

3. It was against this background that the U-2 incident occurred.

A combination of these three factors in our judgment is what resulted in the definite and brutal decision to disrupt the Paris Conference. To determine how each of these factors should be weighed is, for the moment, beyond our reach.

The U-2 incident was most certainly seized upon and magnified beyond its true proportions as a justification for this decision. It is debatable whether it would have been possible for Mr. Khrushchev to devise another pretext for so radical and violent a

position.

It might well be that a lack of success at the summit would have confronted Khrushchev with a much more difficult choice, from his point of view, than no conference at all. He and his associates may have therefore much preferred to avoid facing the consequences of failure of negotiation by the simple expedient of torpedoing the conference.

It may seem incredible to you that responsible leaders of a great power should have come all the way to Paris merely for the purpose of wrecking the conference, thereby incurring worldwide condemnation of the Soviet Union and enhancing the sense of unity and purpose among not only the Western Powers represented there but also the North Atlantic Treaty Organization and free nations everywhere.

I believe the answer lies in a basic miscal-

culation in Mr. Khrushchev's and the Sovi-

et's thinking.

Mr. Khrushchev undoubtedly hoped-and this explains his early arrival in Paris—to divide the allies and isolate the United States. He anticipated that the United States would refuse the demands he had set forth and that the conference would then collapse, with the United States bearing the responsibility for the rupture before world opinion.

His plans miscarried because our two allies stood solidly and loyally with the United States and refused to be parties to Mr. Khrushchev's scheme. The result, as the whole world knows, was that the position which Mr. Khrushchev brought to Paris resulted in the complete isolation of the Soviet Union rather than the United States and in placing the responsibility for the disruption of the conference squarely where it belongs—on his own shoulders.

This estimate of the reasons for Mr. Khrushchev's behavior is strongly supported by the attack which he made at his press conference on General de Gaulle and Prime Minister Macmillan for what he termed their lack of objectivity, lack of will, and sub-servience to the allied relationships—in other words, in plain English, for their solidarity with the United States, their loyalty to our common purpose, and their refusal to play the Soviet game.

IV. THE FUTURE

What conclusions should we draw for the future?

I believe the signs are that there has been as yet no radical alteration in Soviet policy. though we can expect the continuance of a propaganda effort designed to split off the United States from its allies. This conclusion is supported by Mr. Khrushchev's Paris statements, including those at his press conference. It is supported, somewhat more specifically and definitely, by the statements which he made in Berlin on his way home.

We must remember, however, that, given the nature of the Soviet state, the men who run it can meet in secret at any time and change existing policy without public debate or even foreshadowing any such change. It is for this reason that any statement about a phase of Soviet policy must be regarded as qualified, with no certainty that it will remain valid in the future.

Thus, though the world's hopes have been keenly disappointed by the fact that the summit conference was not held as planned, the signs so far are that the basic realities of the world situation have not been greatly changed. Whether this continues to be so depends, as I have indicated, on actions of the leading Communist countries.

Provisionally, however, I conclude that the implication for U.S. policy is that the main lines of our policy remain sound and should be continued. The lesson of Paris is that we should prosecute those lines with renewed effort. Proponents within the Communist bloc of an aggressive course must not be encouraged by signs of weakness on our part. Proponents of a peaceful course should be encouraged by our readiness to get on with outstanding international business in a sober and rational manner.

We must remain prepared to withstand aggressive pressures, not only in Berlin but also elsewhere. I trust that our evident readiness will deter such pressures.

Among the lessons of Paris, the most important for the free world including ourselves, it seems to me, is fresh realization of the dangers we face and consequent need for closing of ranks and moving ahead with our own and our allies' programs for strengthening the free world. We came back from Paris with a keener sense of what it means to have allies, and I am sure that our alliances will take new life from this experience.

At the same time I would stress equally the need to expand imaginatively and generously our collaboration with the newly devel-

oping countries.

On both accounts I hope the Congress will give wholehearted support to our mutual security programs as authorized by this committee, which are now more important than ever.

We must continue, as the President has said, to seek in a businesslike way to make progress on outstanding preblems with the Soviet Union. We intend to go ahead with existing negotiations, to stand by our commitments, and to foster open communication and peaceful exchanges. Above all, we shall not cease from the most determined, patient, resourceful endeavor to find ways to bring the arms race under control and thus to meet the nuclear menace that hangs over mankind.

I believe in this period it is incumbent upon us, all of us, to keep a calm and steady gaze on the world scene and to avoid actions, statements, and attitudes which might tend unnecessarily to increase international tension. If such an increase is to occur, it should be clearly the fault of the Soviets and we should not do them the favor of providing pretext for action by them which would have this effect.

We should not define as hard or soft our attitude or policy toward the Soviet Union. To do so is not only to deflect our gaze from the grim reality that confronts us, but even more to plunge us inevitably into fruitless and damaging domestic recrimination. We must now, as in the future, maintain a vigilant, calm, and resolute posture and, insofar as it lies in our power to do so, be accurate in our estimates and effective in our actions,

I would close in expressing the hope that we will not become so fixed in preoccupation with the Soviet challenge as to lose sight of our own constructive purposes—which are larger and more important than merely resisting or reacting to external threats. We have our own vision of the future toward which we want to see the world evolve. We have our own programs for helping to bring that future about—for holding high the light of freedom, for sharing its message and rewards with emerging

nations, for trying to create an international community in which the rule of law will replace the rule of force. It is to these programs that our talents and energies should be rededicated in the uncertain times that lie ahead.

What Is Communism?

EXTENSION OF REMARKS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1960

Mr. BROYHILL. Mr. Speaker, I should like to call the attention of the Members of this House to an editorial that appeared in the Alexandria (Va.) Gazette on May 23, 1960. It seems to me that this editorial presents a particularly well-reasoned statement of the issues and problems involved in the important question of increasing the knowledge of our citizens, and particularly our children, of Communist propaganda and policies. The editorial reads as follows:

WHAT IS COMMUNISM?

At its meeting last week the Fairfax County School Board went on record to have instituted in the county high schools, a course of study that would instruct as to the meaning of communism. Col. Waldron Leonard, a member of the board, made the suggestion. For some time he has been disturbed by the effect that communistic propaganda has been having upon the minds of some of the youth of our land. He feels that in order to combat the evil effects of the political, social, economic and nonspiritual aspects of communism, it is most important that its true meaning be taught and understood.

The admonition "to seek the truth and the truth shall make you free" led to Colonel Leonard's suggestion and the action of the county school board. So often are we misled by labels that misrepresent products, ob-

jectives, ideas, and ideals.

We cannot ignore the great conflict in the world today between a society that recognizes the dignity of man and his relationship with his God, and a godless, materialistic society that makes of the individual a servant and instrument of the state. To some, communism is made to appear as a perfect social order. To others, it evidences a political philosophy that is used by would be tyrants to destroy the rights, responsibilities, hopes, and aspirations of the individuals.

It must be recognized that some risk attaches to the teaching of the meaning of communism in our public schools. The subject to be taught is one thing—the method employed in the teaching of the subject is something else. A responsibility will rest upon the school board and the superintendent of schools to make sure that well qualified instructors are chosen for such classes. As it is imperative that the real meaning of communism be understood, the risk of having the course slanted must be assumed and guarded against. The personality, thinking and the understanding of a teacher becomes, in varying degree, a part of a course of instruction and give to it color as well as substance.

In our daily lives we are being continuously confronted with the facts of life. Our problem is to discern the facts—distinguish them from fiction—and to properly interpret them in their relations, one to another. Every individual hopes that society will permit and afford him a better way of life. This being a common aspiration of man, some of those

who would give direction to the development of a better social order will emphasize objectives and make reckless promises for their realization. We note little disagreement between political leaders, whether on the local, State, National or world levels, as to objectives. Who can publicly be opposed to the ideals of peace and prosperity—to freedom, justice, and the opportunity for the individual to develop his or her full potential? It is when we come to the means and methods to be employed to attain these objectives that wide differences of opinion appear and are advanced.

A few years ago we heard much about the Four Freedoms. Only the idealist and the optimist can hope that these freedoms will ever be realized. Their attainment presupposes a complete transformation of the nature of man—the elimination of selfishness and his ambition for power. Is there any evidence today that a communistic social order has or can cause to be made such a miraculous change in man?

In recorded history, the nature of man has not changed materially. What changes that have taken place in different forms of society, have been occasioned primarily by self-interest. Wars, with their destruction of life and property, show how easy it is for us to revert to the laws of the jungle if self-interest so dictates. Our search for a utopian social order, whether called communism or by some other name, should not lead us to accept false promises—promises of a way of life that will not and cannot be realized.

There are more aspects to the Communist philosophy of society than just the promise of a better economic social order. ing that a Communist society could provide better for the economic wants of man, what price does the individual pay in order to accomplish such an end? What happens to the dignity and meaning of the individual society? One who teaches the in such a meaning of communism in our public schools must know the subject and be well prepared to answer all of the questions of an awakened and inquiring student mind. Much good can come from such a course if the teaching differentiates between what communism promises in theory and what it provides in performance. Those interested in our schools and what is being taught, should be concerned with how the new course of study will be presented.

Neighborhood Center of Philadelphia

EXTENSION OF REMARKS

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. TOLL. Mr. Speaker, on Monday, May 23, I had the pleasure of attending the dinner celebrating the 75th anniversary of the Neighborhood Center of Philadelphia at the Sheraton Hotel. The main speaker on this occasion was Mrs. Franklin D. Roosevelt, who was also celebrating her 75th year.

The Neighborhood Center today gives guidance to the young and old of all races and creeds, and provides them with the facilities which will contribute to their enjoyment of wholesome leisure. The aim of this great organization has changed from the original concern with the economically and socially underprivileged to helping people of all ages

and all classes to self-realization, self-direction and wholesome citizenship, regardless of their social class, economic circumstances or racial origin.

The current president, James E. Sax, and the executive director, Dr. Julian L. Greifer, conduct the program of Center. The Center has a branch in my district at 820 Vernon Road, where it serves the neighborhood of Mount Airy, West Oak Lane, and Temple Stadium. Its head-quarters are in the district represented by my distinguished colleague, Congressman William J. Green, Jr., at 6600 Bustleton Avenue, Philadelphia.

I congratulate the officers of the Neighborhood Center of Philadelphia, the directors and the people who have worked so hard to establish such a worthwhile organization, which is a model for a number of similar centers

in the country.

Testimony of Ray W. Macdonald

EXTENSION OF REMARKS

HON, ALVIN M. BENTLEY

MOF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the Record, I wish to include the following text of testimony presented by Mr. Ray W. Macdonald, a director and vice president of Burroughs Corp., before the Senate Committee on Interstate and Foreign Commerce. Mr. Macdonald appeared before this committee during hearings on U.S. foreign trade and investment abroad and I believe all Members of this body will find

his comments most interesting since they

reflect the policies and planning of a

large and important manufacturing firm.
The testimony follows:

Mr. Chairman, members of the Senate Committee on Interstate and Foreign Commerce, my name is Ray W. Macdonald. I am vice president of the Burroughs Corp. of Detroit and general manager of the corporation's international division. Pertinent to our present discussion is the fact that I am presently a director of the Committee for a National Trade Policy and am chairman of the World Affairs Committee of the Detroit Board of Commerce.

I am indeed pleased to have the opportunity to appear before your committee to express my views on U.S. foreign trade and some of the broad implications of U.S. investment

abroad.

In order to give an adequate sense of economic perspective to the subject and, in particular, to deal with the question of U.S. investment in oversca productive facilities, as suggested by your chairman, I believe that we must first consider the larger subject of U.S. business abroad and its problems and motivations.

Typically, U.S. investment in oversea productive facilities has been made to serve markets which otherwise could not be served directly from the United States. In the immediate postwar years, severe dollar shortages existed in many countries, resulting in import restrictions on many of the products

exported from the United States. This required the establishment of productive facilities within the dollar-short areas in order to supply them with products originally of U.S. design. The alternative of not taking such action would have been the complete loss of these markets to foreign based competitors.

As you know, many of these countries have strengthened their economies and have, in recent years, removed or reduced these restrictions. However, the requirements and preferences of the consumer in these countries—in many cases—have developed not only for products of U.S. design, but also for a different type of product from those manufactured in the United States. In addition, transportation factors, wage costs, and other similar economic reason dictate that individual foreign markets be served mainly from within those markets.

With the economic resurgence of Europe and many of the other countries of the world in the years following World War II and the recent creation of the Common Market, rising incomes have created a tremendous potential for manufactured products. This potential will, undoubtedly, be satisfied and it seems clear that if U.S. investment is not made in these areas, someone else will make it. This, in effect, has been true in our industry. In spite of the investments made abroad by U.S. office equipment companies. a total of 81 competing firms are actively selling adding, calculating, and accounting machines in oversea markets. Of these 64-almost 80 percent-are European based companies, many of which have entered the market during the postwar period. They were encouraged by enormous pentup de-mand, the difficulties and cost of importing from United States and the relative slownes of U.S. based companies to create adequate production facilities within the trading areas.

I believe that U.S. companies would not normally make an investment abroad if the foreign markets can be served from the United States. The U.S. companies would prefer to maximize the return on their U.S. investments through manufacture for oversea requirements in their U.S. factories. The expense, efforts, and hazards of creating new organizations and skills are too great for them to prefer otherwise. In the most basic terms, American companies' products, organizations, management and technical skills, investments and, finally, their stockholders, are primarily centered in the United States. In order for an American company to successfully invest in production facilities abroad, it must develop or acquire a costly and specialized management team to plan and administer such operations. It is, therefore, much simpler to serve these oversea markets from the home base, if at all possible.

In almost all cases, therefore, the creation of manufacturing facilities abroad should not be termed a movement or export of U.S. facilities, nor the accompanying export of U.S. jobs.

In regard to the quustion of movement of investments to industrialized or underdeveloped areas raised by your chairman, I should say this is really relative to the potential market for the goods to be manufactured. Producers of complex manufactured goods, of which office equipment is an example, do not tend to invest in either plant or extensive marketing operations in underdeveloped countries. These industries tend to expand into the more developed economies which have real need for basic and more advanced equipment. In our case, markets are located in the industrially developed areas, such as Western Europe, Britain, or in the partially developed areas like Brazil, where we have a small plant. On the other hand, I believe that the investment demands of the underdeveloped economies centers around the basic industries such as power, transportation, metals, building and construction materials, and around those basic consumer products such as textile.

A consideration of major importance is the trend for U.S. manufacturing companies to manufacture abroad their simpler or less complex products. The oversea production of such products does not demand the levels of skills or capital investment or depth of managerial experience that are vital to the production of the more sophisticated products we are currently making in the United States. Burroughs is a good example of this. While our oversea manufacture has Burroughs is a good example of shown a substantial growth, it has concentrated on production of the simpler products. Foreign-based companies are already in production on such products with a lower wage cost than a U.S. plant. We have the choice of losing this market completely-a market which we historically developed-or creating oversea plants to compete with foreign-based producers. In the United States, on the other hand, we have tended to shift our emphasis to development of new, highly sophisticated products such as electromechanical and electronic accounting machines and electronic data processing equipment. These, Burroughs is exporting in increasing numbers. As evidence of this, the value of our exports has more than doubled in the past 7 years. At the same time, we engaged in extensive creation of new plants abroad.

Likewise, even though the office equipment industry, as a whole, has invested extensively in foreign markets, it continues to increase its U.S. exports. In 1959, its exports were valued at over \$145 million, a rise of over

60 percent since 1950.

There has been concern expressed in some quarters about the decline in exports and the rise in imports of some of the simpler types of office equipment, such as adding machines and typewriters. However, if we view the entire industry, we can see that the emphasis has been transferred to the more sophisticated type of products such as accounting and bookkeeping machines, punchcard equipment, electronic computers and other data processing equipment. Exports of these products have shown a rise, since 1950, of 150 percent. Furthermore, the difference between the exports and imports of office machines, or the so-called "balance of trade," has shown a net increase for the office equipment industry as a whole. I am sure that this technological revolution has affected many other industries in the United States.

In some markets abroad, some restrictions—such as unreasonably high tariffs and/or quantitive restrictions and/or local taxation—still exist against the free importation and sale of U.S. products. This inhibits the maximum growth and exports of our advanced industries. We feel that it is in the interest of the American economy to negotiate for the continued reduction and elimination of such barriers. Such negotiations involve the recognition of the rights of others to export to us, and we must, therefore, be prepared to accept imports.

The development and evolution of more sophisticated products, plus merchandising methods, management techniques and innumerable other services upon which the U.S. economy depends, forms—for the United States—the real basis of the traditional economic concept of comparative advantage. These capabilities constitute a very significant part of what we export both literally and through the advanced products and services we send abroad.

As we have demonstrated in the past, I believe that America can maintain and expand its competitive position in world trade if it continues to concentrate on research, technological improvements and the con-

stant introduction of newer and better products. We may no longer export large volumes of basic or simple manufactured products. These exports are being replaced by
increasing volumes of products in the form
of advanced products, and services in the
form of management and technical knowhow and patents—which return funds to the
United States in the form of royalties, fees,
and increased dividends in the same manner
as exports. We, of all peoples, should not
try to resist technological change and its impact on trade patterns. Rather, we should
welcome it and maximize its potential advantages to us.

This change in the structure of trade, we know, is true even here at home. The horse-drawn buggy gave way to the automobile. Certainly some buggy manufacturers had to learn new skills. But all of us have profited immensely from the change and ad-

vancement in our standard of living and the power for growth the change has given our economy.

Particularly significant is the fact that our labor force, as a whole, has the potential for further upgrading in terms of capability and earnings. The great number of engineers, professional people, managers, skilled and semiskilled workers, has become the dominant creative factor in our economy. Meanwhile, the number of nonskilled workers has diminished.

In summary, I should like to emphasize that I strongly believe it is in the best interest of the United States to foster a policy of further opening all the markets of the free world to our technologically advanced products. Any attempt to improve our international balance of payments through restrictive trade policies would do incalculable harm. Policies which would restrain the

importation of products of oversea workers, when these imports are used to pay for the advanced technological products of our highly skilled industries, as well as the exportable production of our farms, our mines, and our forests-which still constitutes a major portion of our total annual exportswould be disastrous to our economy. Its consequence would be the decline of American industrial efficiency and competitive vigor. Rather than being concerned about whether some products may be priced out of world markets, we should concern ourselves with being sure that we do not make a hasty move to fence out competition, because this same fence would fence in the exports of our vigorously growing and technologically advanced industries. I believe the same would hold true for our technologically advanced farms, mines, and forest industries.

American Public Power Association

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. ULLMAN. Mr. Speeker, under leave to extend my remarks, I want to insert in the RECORD the following excerpts from an address to the 17th annual convention of the American Public Power Association, held here in Washington earlier this month. They are excerpts from the address by Mr. Paul Phillips, president of the United Papermakers and Paperworkers, and they deal With the vital interest of labor in lowcost power:

LABOR'S INTEREST IN LOW COST POWER (By Paul L. Phillips, president, United Papermakers and Paperworkers, May 5, 1980)

Ladies and gentlemen and fellow creepers, working people, union members or not, have a greater stake in low cost power than any other group. There's a simple reason: working people need more income for better livand the cost of energy has a lot to do with their living standards. The cost of electricity in the home fixes a limit on its use as a labor saver, a convenience, a creator

of comfort and energy.

The cost of power to industry and Government shows up in taxes and the price of every article purchased. Moreover, the availability of an abundance of low cost Power creates jobs at the same time it elimi-

nates the most brutal drudgery.

People who have long been comfortable and who read the "we never had it so good" press of this country, tend to conduct their discussions of need and poverty as though they were strictly problems of foreign countries—mostly the new nations freed from colonial control.

Those of us who work day in and day out

with working people know better.

Last year, 14 percent of all U.S. familiesabout one of every seven—had incomes below \$2,000. Over one-third of all families had incomes under \$4,000.

This poverty, plus our congested streets and highways, croding cities, crowded schools, polluted water, and air—all are evi-Gences we are somewhere short of utopia.

All of us here agree that there can be no increase in productivity without adequate supplies of energy and that if the cost of that energy is too high, it cannot be utilized.

In normal times—and let us hope the past 8 years will not become the norm—the role the consumer-owned electric systems in this country is to serve as a form of competi-

tion in the electric industry, to perform that essential yardstick function without which we have no way of measuring the degree of inefficiency, waste, and stupidity which exists in the private monopolies of the

electric industry.

I need not tell you that without the pioneering efforts of the very earliest municipal systems—systems organized at the birth of the electric industry-the spread of electricity would have been incomparably slower. Few people realize the early mu-nicipal systems did much the same job for many small towns that the REA co-ops were to do for farmers a half century later.

You know, and more people must be told, that if it had not been for Ontario Hydro, for Tacoma and Seattle, and comparable publicly owned systems the electric industry would be decades behind its present level and

would remain a semiluxury.

As long as any part of the electric industry is privately owned, the only dependable means of forcing it to function in a reasonably satisfactory manner is with the yardstick. The private companies can cry enough water to float Sam Insull to Greece about a 30-inch yardstick or a 20-inch yardstick, but we all know that they are influenced every day by the grim reminder that they sell too little power at too high a price.

Regulation of monopoly is not enough. Regulation will not get the job done. Regulation cannot give us low-cost power because low-cost power is the product of creative intelligence and desire. In the absence of these things—and their absence is a relatively absolute certainty where private monopoly exists—the only alternative is the existence of public, consumer-owned systems which can be used as an example to bring some degree of efficiency into the monopoly sector of the industry.

How many people recall that in 1929 there was a controversy in the Federal Power Commission and that the trouble seemed to arise from a recalcitrant bookkeeper by the name of William V. King (he was actually chief accountant) who kept refusing to agree to the issuance of licenses to power companies for one reason or another, including one to the Niagara Falls Power Co. simply because it had claimed a \$77 million net investment, including \$32 million as the value of the water that the Government gives them.

I encountered this story in Judson King's book, "The Conservation Fight," and thought to myself for a moment, "Well, things are a lot better than they were in those days when that company was trying to saddle the consumers with \$32 million in water."

But my cheerfulness was short lived because I recalled that within the decade of the finagling fifties under Ike with rapid tax writeoffs and accelerated depreciation, we have set up the machinery for turning over to the power companies about \$52 billion. And worse, the Congress has never even held a hearing on the bill introduced by Senator Magnuson to overturn the Federal Power Commission's interpretation of the law.

Let's just take a current bill which may very well slide through this Congress-this so-called upstream benefits bill. Under this bill a power company can amble down to this packed Federal Power Commission and get itself a license to build a dam on a river. It may be a runt dam and wasteful because there is no law against that as the friends of Hells Canyon know. But they cannot only get a license to use a part of the public domain for purposes of private profit, but under this bill they can levy a tribute against every consumer of Federal power.

I submit that the forebears of the Niagara-Mohawk Power Co. and all their contemporary brethren were pikers, from Muscle Shoals to Teapet Dome, compared to the sponsors of the upstream benefits bill.

These antisocial scoundrels spend vast quantitles of money-wrung from the housewife's washing machine—to prevent the compre-hensive development of the Nation's rivers. Then, since they know that this represents waste so incredible that their fingers itch to get hold of the power, they come in with this scheme to subsidize private construction of dams.

When I spoke at the first meeting of the Electric Consumers Information Committee here in Washington in 1952, I had with me a couple of electric bills from two of our members. One lived in Thorold, Ontario, and the other in Niagara Falls, N.Y .- just 15 miles apart. At that time the American was paying 60 percent more than his Canadian brother for the same amount of electricity.

Last year, same towns, the American would pay 81 percent more for 100 kilowatt-hours (\$1.95 versus \$3.54), and 45 percent more for 500 kilowatt-hours (\$7 versus \$10.14).

But what is the difference between being taxed by an inefficient government (and I am not really talking about our own here because except for the Pentagon, I think the Government operates pretty efficiently). and being taxed by a power company.

Oh, all the difference in the world, of course-because you have to pay taxes. You

have no choice.

Well, try cutting off your electricity. you were willing to do so, you'd be able to save money not only on power bills but you could probably live cheaper in a bachelor apartment somewhere after your wife threw you cut.

Electricity is an absolute essential of modern living, just as essential as government, and we have a right to get both of them as economically as is humanly possible.

Since 1947 the average level of electric rates has gone up 12 percent. The regulatory agencies are really doing a job—out of 577 applications for rate boosts, they have granted 515, have 27 pending, and the companies have withdrawn 13. But hear thisthe regulatory agencies denied 22—repeat, 22—out of the 577. The companies which turned in those 22 must have used the wrong form or left off the board chairman's signa-

I want to speak a moment about the Potomac River, because it was originally a beautiful river. It can be again, as it flows by our Nation's Capital, but the stench of it should not fill the great room where Abe Lincoln sits brooding.

For almost 40 years, beginning with Senator Norris and running right on down to the present Potomac River Development Association, the people have been trying to harness this river and clean it up. There have been some sewage filtration plants built, but

The main reason the Potomac River is a filthy sewer which runs at flood sometimes and at others is little more than a smelly trickle is because the private power companies would rather have it this way than place their monopoly privileges in jeopardy.

If the antimonopoly preference clause in Federal law were stricken from the statute books, the overwhelming bulk of the opposition to comprehensive development would vanish. The real enemics—the effective practitioners of sabotage on river developmentare the private power companies. The railroads, the coal companies, the defenders of the polluted primeval spaces, the politicians who cry about inundating farmland are all largely impotent except insofar as they are given political strength by the power trustthe power trust and that fraternity of its cousins and its uncles and its aunts-the General Contractor's Association.

So the battle for comprehensive development is a battle with the forces against whom Teddy Roosevelt, Gifford Pinchot,

George Norris, and 10,000 other leaders great and small have warned us—the private monopolists who own and operate the private companies and those cash register artists, the big contractors.

Three-quarters of our hydro capacity is

wasting.

The rivers of this Nation belong to all of the people and should be developed with a view to the greatest good to the greatest number. They must be developed by public agencies, preferably the Federal Government.

The power which flows from this development must be made available to nonprofit agencies on a preferential basis. The preference clause is an antimonopoly clause, and in a broad sense, its protection is as vital to the private companies as to the public and cooperatives systems.

Nobody in America can afford monopoly in the electric industry and you, and the rural electric cooperatives, and the Federal and State agencies in the power field are the indispensable ingredient in the industry. We must cease to hem and haw, apologetically, about championing Government own-

ership in the electric field.

The advantages of public ownership in the electric industry run to things other than direct yardstick effects on eleteric rates. In 1959 TVA rejected bids from Westinghouse and General Electric for some large generating equipment and accepted the bid of an English company at savings of 40 to 50 per-cent. TVA was damned for selling American security down the river and wiping out jobs for American workers. Westinghouse printed a map which showed, I assume truthfully, that practically all foreign manufactured generating and large-scale transmission equipment was operated by consumer-owned systems. They gave away more than they intended to. What they revealed was that the private power companies, operating as they do on a cost-plus basis, do not care how much their equipment costs.

What happened, of course, was that GE and Westinghouse had increased the prices on heavy electrical equipment by 50 percent during a period when other prices were rising

about 5 percent.

I am proud that the AFL-CIO and particularly the union most vitally affected by this dispute, Jim Carey's IUE, stood its ground in the face of corporation pressure and pointed out that even if the Westinghouse workers worked free on the contract, the British company would still have won the bid. They pointed out that the danger of imports to security or employment did not spring from the work of creeping socialists who like to buy equipment at a low cost, nor union workers who like to make good pay, but was the result of monopolistic price fixing.

The purposes you serve, and the ends we seek are the same. We have not been doing as much as we could to bring about an abundance of low-cost power, and I doubt that you have. Give us your assistance in finding ways to do more and do the job better. We will always stand ready to assist consumer-owned electric systems to survive, and grow, because they are essential to abundance.

Tax Havens Abroad

EXTENSION OF REMARKS

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. GROSS. Mr. Speaker, big profits and little or no tax is the lure that is at-

tracting more and more U.S. firms to tax havens abroad.

That is, in part, the introduction to an article in the May 30, 1960, issue of U.S. News & World Report.

The article makes no mention of the passage of H.R. 5 in the House of Representatives, a bill to further encourage the flight of capital abroad, probably because U.S. News & World Report was being printed on the day that legislative action was taken.

The article follows:

TAX HAVENS ABROAD

American companies by the hundreds are now setting up shop abroad, making big profits, and paying out little or none of these profits in taxes.

How? Simply by setting up subsidiaries in a foreign "tax haven" country.

These countries collect a small tax—or sometimes no tax—on profits of subsidiaries of U.S. corporations. Likewise, the U.S. Treasury imposes no tax so long as a subsidiary's profits are not sent back to the U.S. parent company.

U.S. parent company.

As a result, many U.S. concerns, through subsidiaries, are getting to keep 70, 80, and even 100 cents of each dollar of profit. This money is being used to expand sales organizations, research projects, and productive

facilities abroad.

Moreover, after a few years, it is possible for the U.S. parent company to liquidate the foreign subsidiary, bring home the profits that have been built up and pay the U.S. Treasury a capital-gains tax of only 25 percent.

NEEDED: CAREFUL PLANNING

There is nothing automatic about these benefits. To get them takes careful planning to set up the right kind of business organization—and to locate it in the right country.

In the first place, to avoid paying a U.S. tax which can run up to 52 percent, the American concern must set up a separate company abroad. If it merely opens up a branch or handles its business through an oversea agent, U.S. taxes must be paid annually on the foreign income.

Then there is the selection of a country which will give the most favorable tax treatment while meeting other requirements for

operating a business.

Take Switzerland: It provides a good example of how—and why—U.S. companies are moving abroad in record numbers these days.

There are now 365 American businesses in Switzerland. In Zurich alone, the number of U.S. firms has passed 200—almost doubled within the past year.

Some U.S. businesses have set up Swiss holding companies which own the stock of still other subsidiaries in Holland, Belgium, Germany and other countries. Others are trading companies, directing from Switzerland the export sales of the parent U.S. company. Still others are Swiss branches of American subsidiaries incorporated in other "tax haven" countries around the world.

A POPULAR BASE

Switzerland is popular as a foreign base for several reasons: It is close to major European market areas; it is politically and economically stable, and it offers excellent banking and credit facilities. Also highly important are its low taxes.

Switzerland imposes no tax on holding-company income earned outside the country. Thus, a Swiss-based U.S. holding company can bring profits into Switzerland from plants operated by subsidiaries in France or Germany without paying any tax to Switzerland. Of course, the operating subsidiaries pay taxes in France and Germany.

On income that is subject to Swiss taxes, the maximum Federal rate is only 8 percent. Even when you add taxes imposed by the individual cantons, Swiss tax lawyers say the total tax bill often amounts to less than 15 percent of profits. Since no U.S. tax must be paid, that leaves 85 cents on each dollar for expansion or for loans to other subsidiaries that might need financial help.

OTHER "HAVENS"

In addition to Switzerland, there are more than a dozen other "tax havens" around the world.

For example, Bermuda and the Bahamas do not levy income tax on corporations. Puerto Rico offers a special exemption from corporate taxes for 10 years.

U.S.-owned holding companies in Liechtenstein and in Luxembourg are free of any

income tax.

And in Canada, Honduras, Liberia, the Netherlands Antilles, Uruguay, Panama and Venezuela, there is no tax on the income earned outside those countries by U.S.-controlled companies.

Figures on the number of U.S. companies operating abroad are not available. Talk with tax lawyers and accountants, however, and you find that more and more U.S. companies are seeking out "tax havens" in every part of the world.

How do U.S. tax officials feel about this

trend?

Said one Revenue Service official: "Tax havens are perfectly legal—and who can blame an American company for using any legitimate avenue to hold down its tax bill?"

CRACKDOWN ON EVADERS

However, the Government is keeping a sharp eye out for cases where a U.S. company sets up a foreign subsidiary solely to beat the U.S. tax collector.

beat the U.S. tax collector.

Tax agents have cracked down on some of these schemes in recent months. Here is the most common device: A U.S. parent company, instead of selling its product for 10 cents aplece in a normal commercial deal, might sell it to a wholly owned subsidiary in a tax-haven country for, say, 5 cents.

At that price, the parent company would show little or no profit, but the subsidiary would do very well. In effect, the U.S. parent firm would be diverting profits abroad where they would be free of U.S. tax—an illegal act.

In another case turned up by investigators, the U.S. parent company paid unusually large sales commissions to its foreign subsidiary—thus pushing most of the profits abroad. The tipoff came when the parent company, which had been making sizable profits each year, began to report to the Revenue Service that its earnings were barely large enough to meet expenses.

ly large enough to meet expenses.

Tax officials are quick to emphasize that the great majority of U.S. companies moving operations into tax-haven countries are "strictly on the up and up."

Government officials expect that growing competition in world markets will force more and more U.S. companies to move abroad where labor costs—and taxes—are lower.

where labor costs—and taxes—are lower. Sums up one Treasury official: "Tax havens have only begun to become popular."

Postal Rate Increases

EXTENSION OF REMARKS

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1960

Mr. OLIVER. Mr. Speaker, on May 26, Mr. Bernard E. Esters, of Houlton.

Maine, appearing as chairman of the legislative committee of the National Editorial Association, made a forceful and convincing statement before the House Post Office and Civil Service Committee in the interests of the small-town press of America against proposed postal rate increases in second-class postal rates.

In the interests of informing the membership of the House, and the Nation as a whole, of this factual and objective presentation, I am privileged to include Mr. Esters' statement, herein:

Mr. Chairman and members of the committee, my name is Bernard E. Esters. I am the publisher of a weekly newspaper in Houlton, Maine. I would like first to express the thanks of the members of the National Editorial Association for the indulgence of this committee in permitting us time to present the views of the small-town press of America, for which this association is the only national voice, on the matter how before you.

I appear at this hearing as chairman of the legislative committee of this association and as a weekly newspaper publisher. I am privileged this morning to be accompanied by the executive vice president of our association, Mr. Edgar S. Bayol, of Washington, and by Mr. Walter Potter, of Culpeper, Va., president of the Virginia Press Association and cochairman of the legislative committee of the National Editorial Association.

It will be our purpose to outline in as brief detail as possible the opinions of small-town newspapers on proposed adjustments in second-class potal rates. These opinions are reflected in replies to a questionnaire circulated to our complete membership, in letters from publishers and in personal interviews. They represent a factual as well as a documented estimate of the impact on these thousands of small but vital newspaper operations across the country that will be caused by increases in second-class postal rates as proposed by the Post Office Department.

At the outset I would like to make it very clear that the National Editorial Association is far from an affluent newspaper trade association even though it is the largest association of its kind in this country.

Hence, we are proud to inform this committee that the entire survey from which will be drawn the facts and figures that will follow, was done at a cost that will add less than \$1.500 to our deficit at the end of fiscal 1960. We ask that you compare this figure with the \$137,000 reportedly paid by the Post Office Department for the McKinsey & Co. study which will, we assume, be chargeable to that Department's deficit, on which so much stress is being laid in these hearings.

Contrary to what this committee may have been led to believe by previous testimony from those favoring upward postal rate adjustments, and by material contained in the study of the "impact of postal rate increases" prepared by McKinsey & Co., smalltown newspapers across the Nation, in every congressional district and in practically every county, are expressing very grave concern that the increase in second-class postal rates and the accompanying request that the free-in-county privileges be abolished, will cause serious and burdensome hardship.

I can also state very frankly that we are not only greatly disturbed, we are deeply shocked, at what appears to be an irresponsible assumption in the McKinsey & Co. study which declares that the newspaper publishing industry can "apparently adjust to postal rate increases with no serious difficulty."

This, I solemnly assure your gentlemen, a gross misstatement, a conclusion en-

tirely unwarranted by the facts as we have found them.

There is no information anywhere in this published study that will reveal the identity of the weekly newspaper publishers who, when interviewed by McKinsey & Co. representatives, "generally expressed little concern that an increase in the scale proposed would cause them any particular difficulty."

Such modest anonymity is quite unlike weekly newspaper publishers as we know them. He is the exception in the weekly, semiweekly, and small-town daily field, with whom we are familiar, who will be bashful about identifying himself with an opinion, especially on a matter of this gravity.

And when these replies are quoted as stating that "they have had to adjust to large increases in their chief costs, paper and wages" and "Hence 'they' felt that minor increases in subscription rates that would be necessary to cover increases in postage would be passed on to the subscriber," we cannot help but become more skeptical.

As I say, we do not know nor will we be told, apparently, the identity of these publishers casually referred to as "they." I might also add that we could easily doubt their existence in the light of the overwhelming testimony that has flowed in a steady stream into the Washington office of the National Editorial Association from publishers in 49 States saying just exactly the opposite.

These responses came to two questionnaires which were sent to 5,057 small-town
newspaper publishers when we first were
warned of the intention of the Post Office
Department to seek drastic increases in postal rates and when it was also realized that
these increases, if granted, would be far more
burdensome on small-town newspaper operations than the advance publicity by the
Post Office Department would have everybody
believe.

For instance, when we had an opportunity to study the actual bill and read the fine print, so to speak, and then applied the schedule of rates to a few newspapers with which we were familiar, we were astounded to find that, instead of the 40-percent increase we had been told we might expect, the increase was more likely to be 600 percent.

However, we will go into the facts which these questionnaires revealed later on in this testimony. Suffice it to say at this point that we, as of May 10, have receive a total of 1,900 replies to these questionnaires, or a remarkably high response of 38 percent.

It is our intention to confine our testimony strictly to those provisions of this postal rate increase measure which directly affect our membership—namely, those dealing with second class—and to show to you what great harm such increases would work on our people, if they are enacted.

We are supported and encouraged by two fundamental principles that are so well established they call for little or no elaboration.

The first, which has been recognized time after time by the Congress, is that the postal system of the United States was originally conceived as a public service, instituted and operated for the benefit of all people.

The second is that newspapers are quasipublic institutions—independently owned and operated to be sure, but dedicated to the service of their people and their communities.

Since before the founding of this country and continuously to this day, all branches of the Government as well as the public, have recognized that free and independent newspapers are essential to the growth and to the welfare of this Nation.

The principle that the post office is a public service is abundantly supported by the great volume of testimony given before previous hearings by the Committee on Post Office and Civil Service, particularly that

which in large measure resulted in the passage by the Congress of the Postal Policy Act of 1958. I am sure you are familiar with its well-documented findings which are, in principle, no less true today.

The principle that a newspaper is indispensable to the welfare of the Nation and thus susceptible to fosterage by the postal system was well expressed by Senator Hardwick, of Georgia, when he was a member of the Senate Post Office Committee. In a statement made before the Senate Committee on Finance on May 28, 1917, he said:

"The principle is that under a free government the diffusion of news and intelligence among the people is indispensable, and in order to promote it the postal system should carry matter of this kind at a very nominal rate, even if a heavy expense to the Government is thereby entailed."

Even our Postmasters General have, on occasion, supported this principle. In his annual report for the fiscal year 1901, Postmaster General Charles E. Smith stated it as follows:

"Our free institutions rest on popular intelligence and it has from the beginning been our fixed and enlightened policy to foster and promote the general diffusion of public information.

"In harmony with this sound and judicious policy," Postmaster General Smith went on to say, "it (meaning the Congress) has deliberately established a low rate of postage for genuine newspapers and periodicals with the express design of encouraging and alding the distribution of the recognized means and agencies of public information. It is not a matter of favor but of approved judgment. It is not for the publishers but for the people."

We would like at this point to comment on an inference in testimony previously presented at this hearing which would suggest that "advances in communications and transportation, the spread of news and educational media, and the growth of the postal service since the mid-19th century have been so extensive as to make obsolete virtually all of the considerations which prompted within-county rates."

If we are to assume that advances in communications mean the development of radio and television, plus the expansion of daily newspapers and the growth of national magazine circulation and if we are to assume that advances in transportation mean the development of the airplane, we still are undable to accept any glib conclusion that the importance of the role of newspapers in the dissemination of vital information, has diminished to the point of becoming obsolete.

If anything the importance of newspapers has increased. And more particularly is this true of the hometown newspaper. To illustrate this point I have here for your examination just a few typical examples of the many thousands of dollars' worth of free space given away by hometown newspapers to inform their readers on matters of vital importance to the Government of the United States and its various departments.

It would be folly for us to contend that radio and television do not have their place in the social, commercial, and economic life of many American families. But to suggest that these comparatively young media of communication can supplant newspapers and/or other printed media to the extent that these media now fill no useful purpose in the widespread dissemination of valuable news and information is an utterly felse assumption that will be indignantly denounced by every newspaper and magazine in this country regardless of size and frequency of issue.

It would be pertinent, we believe, to inquire what means the Government and its agencies at all levels would use to get their messages to the people of rural America if the smalltown newspapers were put out of business in great numbers.

Any increase in the burden of costs could make it necessary for them to curtail use of the flood of free Government releases each week to devote more space to income producing advertising or more interesting and important local news.

A case in point is the exhibit I just offered in evidence, the recent 5-column-by-10-inch mat offered for newspaper use by the Census Bureau entified "Have You Been Counted," and designed to assist in the mopup tally of persons whom the regular census enumerators may have missed for one reason or another. Such distribution could hardly have been achieved by radio or television.

I am not aware of the extent to which large daily newspapers used this free matorial. I am quite sure that weekly and small daily newspapers of the size that make up the membership of the National Editorial Association used it extensively. Some even informed us they used it twice instead of the one-time insertion that was requested.

This amount of space in these newspapers could profitably be sold at a price varying between \$30 and \$60, depending on the advertising rates of the individual newspapers. If only one-half of the newspapers in our class in this country used this mat and if we assess an average of \$40 as a reasonably representative cost of the space involved, we come up with a figure of more than \$1½ million of donated space for this one public service alone.

This amount of space given away by a newspaper costs each one of them money they will never be able to recover, either from advertisers whose paid message this free space may have displaced or in the loss of the normal costs from rent, heat, light, taxes, labor, depreciation, paper and all of the other costs that go into every column inch of white space in every issue of a newspaper regardless of whether that inch is occupied by material that is paid for or by material from which there is no income.

The foregoing example is but one isolated case in a continuing parade of services to government donated by smalltown newspapers and not available on an equivalent basis in any other medium of communication.

Among the other services to government that will be jeopardized by any act or law which might have the effect of reducing the number of newspapers available to provide such types of service as the one just mentioned would be the frequent airmail releases that come from the Post Office Department, including information by which publishers of newspapers would be better prepared to fight the Department's battle for higher postal rates, including those proposed for their own publications.

The list of such "information services" can be expanded to almost any extent. Smalltown newspapers are being constantly importuned by the Savings Bond Division of the Treasury Department to encourage more widespread buying of war bonds by the public; civil defense is a constant supplicant for free space to get its messages across in the areas served by our small newspapers; the Department of Agriculture, both State and National, the recruiting services of all branches of our Armed Forces, the Departments of Commerce and Interior, and so on, ad infinitum.

And now, gentlemen, we believe it is important to tell you something of the current economic status of America's hometown press that has very pertinent bearing on the additional costs of doing business which this legislation proposes to impose on them.

The National Editorial Association, as an integral part of its function, maintains the Weekly Newspaper Bureau, a special department devoted to research. It was my privilege to have had a part in founding this bureau more than 15 years ago.

This bureau works in close cooperation with newspaper association managers, which is, as its name implies, the National Association of Press Association Executives. For the past 9 years the two organizations have conducted an annual weekly newspaper cost study.

This is a nationwide study designed to learn, for comparative purposes, the average income and the average expenses in all principal categories for weekly newspapers in six different circulation brackets. It is the only national study of its kind and is highly regarded in the industry.

This ninth study covers the year 1959 and gives a remarkably reliable picture of the financial condition and the economic position of the average weekly newspaper. Its findings are not for general publication, but we have obtained permission from the cost study committee to excerpt some of the data and to provide each member of this committee with a complete copy of the 16-page analysis for further examination.

May I emphasize again that this is the ninth annual study. It was made in the customary manner entirely without regard to any question of higher postal rates. It was not made to prove anything. Its purpose this year, as last year, and as it will be next year, is to provide a yardstick by which a weekly publisher can measure his particular operation in his circulation class. Thus he may be enabled to correct defects in his own operation, to his profit.

In the cost study newspapers were divided into six groups according to circulation, as follows:

Group 1: Under 1,000 circulation.

Group 2: From 1,000 to 1,500 circulation. Group 3: From 1,500 to 2,000 circulation. Group 4: From 2,000 to 3,000 circulation. Group 5: From 3,000 to 4,000 circulation.

Group 6: Over 4,000 circulation.

Now let us consider the average total income for newspapers in each group. And we ask that you take especial note of the fact that, in the great majority of cases, this income includes money received from printing and other sources as well as from advertising and circulation.

In group 1—newspapers under 1,000 circulation—the average total income in 1959 was only \$14.417. The average net income, including an allowance of \$4,500 for the publisher's own salary, was only \$5,392. After deducting this very low publisher's salary allowance, the average net income was the munificent sum of \$892 for 12 months of hard work.

In group 2—newspapers with 1,000 to 1,500 circulation—the average total income was \$33,327. The cost study analysts allowed this publisher \$5,000 as a salary allocation and, after that, the average net income, over expense, was \$1,499.

For group 3—1,500 to 2,000 circulation—we find an average gross of \$47,709. An allowance of \$6,000 was made for the salary of the publisher—perhaps slightly more than he paid his linotype operator but probably less than he paid his shop foreman, reducing the average net to \$2,206, or 4.6 percent of his gross.

In group 4—2,000 to 3,000 circulation—which, incidentally, probably represents the middle 60 percent of weekly newspapers, the average total income reached a figure of \$66,949. In this bracket a publisher salary allocation of \$6,500 was made after which the net average income figured out to \$2,873, or 4.3 percent.

In group 5 things appear to get considerably better. This group comprises papers with 3,000 to 4,000 circulation. Here we find an average total income of \$120,571. The publisher was allowed \$7,000 for his annual salary and his net then turned out to an average of \$9,036 or 7.5 percent.

In the top group, 6 newspapers having more than 4,000 circulation, we find the

elite of the industry. At least in terms of dollars. However, it is estimated that less than 15 percent of the country's smalltown newspapers are in this category. In this bracket the average total income was \$172,-190, the publisher was allowed \$7,500 and the average net return, after expenses, was \$10,580 for the year, or a percentage of 6.1.

From this survey it is amply clear that the vast majority of the weekly newspapers of the country are struggling to put out their papers and still earn a modest living. It is also very clear they have a very thin margin between income and costs and any increase in expenses can easily result in a serious dislocation. Every item of expense, then, is significant. No expense, however small it may be considered to be, will fail to have a telling, even a possibly disastrous, effect on their security and welfare.

And now, Mr. Chairman, may we return

And now, Mr. Chairman, may we return to the industrywide questionnaires to which we referred earlier. The information derived from it is completely documented and substantiated by facts. It is utterly devoid of conjecture or unwarranted assumption.

As had been said before, these questionnaires were sent to 5,057 smalltown weekly, semiweekly, and daily newspaper publishers. As of May 10 when this tabulation was made we had received 1,900 replies, or a rate of return of 38 percent which is without precedent in this association and many, many times higher than the normal rate of return.

These questionnaires asked, among other things, the amount, in dollars per week, the proposed increase would cost the publisher for mailing his newspaper under second class. In order to insure against error, we requested him to go to his post office and have the appropriate clerk figure what his rates would be, as compared to what he is now paying, if and when the new schedule went into effect.

When we determined the information sought in the first questionnaire would not be sufficient to measure the true extent of the dollar impact, we circulated a second questionnaire to the same list. On this one we sought to learn:

- Does the publisher addressed favor or not favor elimination of the free-in-county privilege?
- 2. How much of an increase will the proposed new rates make in the publisher's weekly postage bill for second class mail?
- 3. How much of the increase will be represented by elimination of free-in-county?

The 1,900 replies from both questionnaires were placed in the hands of a professional data processing concern in Washington and the results were put on IBM punchcards and the data tabulated. The results are available for the study of any member of this committee, or of the Congress, who may be interested. Primarily, however, we ask you to remember that these returns are not from a handpicked group of newspapers. They are from newspapers in 49 of the 50 States and in numbers amply large enough to qualify as a sample that is "unquestionably representative."

The first questionnaire brought returns from 601 newspapers—with no separation of weeklies from dailes. It showed that the average dollar increase per newspaper would be \$30.46 per week or \$1,583.92 a year. This amounted to an average increase of 350 percent.

The second questionnaire is based on replies from 1,299 newspapers of which 1,203 are weeklies and 96 are dailies. It showed that the average dollar increase per newspaper for second-class postage would be \$39.86 per week or \$2,072.72 a year. This amounted to an average increase of 244 percent. Somewhat higher you must agree than the "about 40 percent" estimated by the Post Office Department.

Incidentally, the information also revealed that the average dollar increase for hometown dailies would be \$68.45 a week or \$3,559.40 a year—up 145 percent. For weekly newspapers the average increase would be \$37.57 a week, or \$1,953.64 a year, or an increase of 252 percent.

The second questionnaire also produced some very interesting information about the free-in-county newspaper mailing privilege. It showed, for example, that 65 percent the increased costs for newspapers that would result from the new schedule, would be caused by elimination of free-in-county; the remaining 35 percent would result from the

proposed new per copy rates.

This survey also settled beyond a doubt the opinions of newspapers on the question of whether or not the free-in-county mailing privilege should be continued. For the benefit of the Post Office Department we can report this opinion as emphatically in the affirmative by the overwhelming margin of

81/2 to 1.

Of all newspapers queried, 86.6 percent favor retention of free-in-county and only 10.7 percent are willing to lose it. Of the weeklies, 87 percent are for retention, 10.2 percent are against it. Among dailes the Percentage is 81.3 percent favoring retention and 16.7 percent against.

Reference has already been made at this hearing to a poll indicated as having been taken by the National Editorial Association Which included a question designed to reflect an opinion on retention or abolition of the

free-in-county mailing privilege.

The use of the word "poll" to describe this activity, in an article in the National Publisher magazine for October 1958 was an unfortunate choice of words even though it was qualified by the adjective "informal." misunderstanding of our intentions could quite easily result, and apparently did, from this terminology.

We considered this more in the light of a restricted inquiry which went to a small percentage of members. It was really a limited sampling of opinion on various probable legislative trends to provide guidance in establishing a policy to be followed by the legislative committee, of which I was then

chairman.

Such sampling of opinion among key people is not uncommon prior to the opening of a session of the Congress. The results in this particular case turned out to be so inconclusive they were of no use whatsoever. I might explain that this same sampling also include questions designed to bring out information we thought might be of value to our committee. These, likewise, elicited a very unsatisfactory response.

So, as far as my personal knowledge is concerned, the National Editorial Association has not, at least within the last quarter of a century, been a party to an industrywide Poll of any significance on the free-in-county mailing privilege. Certainly none to compare in scope and response to the one just concluded, the results of which are made a part of this testimony We regret that a contrary impression may have been created.

You have also heard testimony, I am told, to the effect that a State press association Passed a resolution directed to the Congress requesting that the free-in-county mailing Privilege be abolished. The State in question was Wisconsin and this action was taken by the association's board of directors in Feb-

ruary 1958.

It should be emphasized that this resolution was a board action and not an association action, which is quite a different matter. This may account for the revealing replies from publishers in the State of Wisconsin in answer to the NEA questionnaire. Now, and we have the records to show it, 75 Percent of that State's newspapers are against giving up free-in-county mailing privilege.

Mr. Chairman and members of the committee, I would not wish you to infer, from the lengthy testimony that you have been considerate enough to listen to so far this morning, that the smalltown newspapers for whom I speak, disclaim interest in or willingness to use the material so gratuitously offered by Government at all levels. Millions and millions of dollars worth of free space is donated every week by our news-paper members of the National Editorial Association and those who are not members, for every conceivable type, variety, kind, and degree of public service. It is our devout wish that we be allowed to continue to do so.

But, we cannot help but wonder, as we contemplate this public service contribution which has been going on for as long as there have been newspapers, just how these mes-sages, this information, this educational material, this patriotic utilization of newspaper space, considered to be so critically important to our various levels of government, can so efficiently and effectively be delivered to their intended audiences if newspapers are forced to go out of business by oppressively high costs, from whatever source they may come, including higher postal rates.

In the foregoing, Mr. Chairman and gentlemen, we have tried to emphasize and explain the precarious and insecure economic condition the hometown press of America finds itself in today and the very damaging effects the exhorbitant postal rate increases will have on its future welfare as a whole.

Now may we take up some impressions in the McKinsey & Co. study which we honestly believe to be erroneous and entirely unwarranted by the facts. Let us examine two specific cases, those to be found on pages 2-21, 2-22, and 2-23 of the McKinsey & Co. study.

Here we find an example of what purports to be a typical weekly newspaper of "about 1,000 circulation." The report goes on to give the following breakdown of income and expenses:

Advertising revenue_____ \$15,000 Subscription revenue 2,940 Newstand revenue_____ Total revenue_____ 19,085 3,800 Printing costs_____ Part-time help_____ Total

Postage: First class_____ Second class_____ Total postage____. Owner's salary, charged to news-

Then, the report concluded, "As these figures show, the cost of postage-at either present or proposed levels-is not a major factor in the economics of this business.'

With this naive conclusion I would like to very vigorously dissent. May I, as a weekly newspaper publisher for more than 30 years, tell you that no operation of which I have knowledge keeps its records in such neat and limited categories. Almost all small-town publishers in all circulation brackets operate printing departments in connection with their newspaper. The result is a far more complicated and certainly a more comprehensive balance sheet than the abbreviated form we are asked to accept.

This example would almost lead to the accusation that this case is an entirely fictitious one especially since we are asked to believe that "part-time" help costs an even \$3,000, almost as much as an even \$3,800 for printing costs.

The examples given you from the 1959 cost study showed a publisher of a news-paper of about 1,000 circulation to have a total average income of—not \$19.935—but only \$14,417, a slight difference of \$5,218, or 26 percent.

Next, this mythical newspaper divides its subscription revenue and newsstand revenue into separate figures. This may be done in very rare cases but it certainly is neither common nor necessary. Income from selling newspapers, no matter how they are sold, all goes into one circulation revenue account, with no division for newsstands. newspaperboys or mail. This lumping of such income will be found to have been done by all newspapers reporting in the annual weekly newspaper cost study.

Also, the McKinsey report newspaper took in \$4,085 for circulation, or more than 20 percent of its total revenue, whereas the average weekly newspaper in the annual cost study reveals subscription revenue to account for only 10 percent of its total revenue. This \$4,085 income from subscriptions is also an interesting figure especially if we look at the \$1,145 of newsstand revenue which goes with it. If this proportion is correct it means that this mythical publisher receives a net return to himself of 11 cents per week per copy for the 200 copies he sells at newsstands or through carrier

This indicates the odd retail price of 14 cents per week per copy of an eight-page newspaper if, as the report states, the ven-

dor's margin is 3 cents per copy.

If there is a weekly newspaper in the United States that sells for this price or that receives this high percentage of gross income from this category of circulation, we believe it is an extremely execptional case.

We next direct your attention to that nice, round figure of \$3,800 for printing costs of producing 1,000 copies of an eight-page weekly newspaper, 52 weeks a year. means an average cost per week of an amaz-

ingly low \$73.

Even if you know nothing about printing, gentlemen, and I am sure many of you are quite familiar with it, you must certainly wonder what kind and size newspaper can be produced for this kind of money. I am sure every member of the National Editorial Association, even those who have wellequipped printing plants, would like very much to get this publisher's secret or, bet-ter still, acquire his services, at the same

This same balance sheet, or profit and loss as it should be called, blandly ignores such essential items as depreciation, utilities, taxes and rent, repairs and upkeep of machinery, costs of automobile, reserve for the inevitable bad debts and many other costs that have to be paid every week by every publisher if he expects to remain in business. These costs add up to at least 25.2 per-

cent among the newspapers in the 1,000 circulation class reporting to the annual cost study. All of which makes the McKinsey statement completely unbellevable, especially since, on top of everything else, the operator of such a small business can take for him-

self \$9,000 a year.

9.000

When it comes to postage costs the Mc-Kinsey study says their newspaper will be required to pay an extra \$230 a year if the proposed rate schedule is adopted. However. a study of the answers to the NEA survey reveals the average weekly newspaper, in all circulation brackets, will be called upon to pay \$37.57 more each week or a total of \$1 .-953.64 a year. We cannot see how the Mc-Kinsey paper can escape a similar increase. But, if he has a secret of such value, we hope he will share it with the rest of his fellow publishers who certainly can use it.

I will not bore you further with an itemized analysis of the second typical weekly newspaper example given on page 2-22 of the McKinsey report. It is subject to the same oversimplification and miscalculation that is true of the one just analyzed.

The most significant fact of this example is that it selects a mythical weekly newspaper of 2,200 circulation. According to National Editorial Association calculations for dues purposes, this is the exact size of the average weekly newspaper in this country. On the basis of our proven returns, which we can substantiate by actual figures, the average paper of this size will be called upon to pay \$1,953.64 a year and not the \$400 assumed by McKinsey and company.

We have no wish to be unfair or unjust in our analysis of these examples, apparently taken from the air, as compared to those for which we have documentation. However, we cannot escape the conclusion that, for \$137,000 of the taxpayers' money the Post-master General should have received more

accurate figures.

Lest there be any thought that I, as the person selected to present the foregoing testimony, am an alarmist or have overstated the case, I would like, with your permission, to make some verbatim quotes from voluntary letters received in the National Editorial Association office on this very grave matter.

Some of these statements may be from publishers in your own State, district, county, or town, but they are typical and selected at random from the many hundreds we

received.

Newspaper in Upper Marlboro, Md., the Enquirer-Gazette: "Needless to say, adoption of these increases, especially the removal of free-in-county privilege, would be disastrous to all and many small weeklies will be put out of business.

Newspaper in Cortland, Nebr., the News: "I am glad you are taking this matter up, because if this goes through hundreds of small town newspapers are going to quit business, being forced out by the Government."

Newspaper in Corydon, Ind., the Corydon Democrat: "In spite of the claims that there is something wrong about delivery of mail to rural subscribers free, there are still valid claims for it. As intended by the legislators who originally enacted the law, carrying news of county business, community affairs, political announcements and other local educational service is a logical and important governmental function.

"In this county, as in many others, the number of postal employees and carriers

would not be changed in any way if there were no local newspapers to handle." Newspaper in Ithaca, Mich., Gratiot Coun-ty Herald: "Most weeklies feel that they have gone about as far as they can in advancing subscription and advertising rates to cover increasing costs including increasing postage rates, and small weekly papers are the ones which will be hardest hit by the proposals. Unless it is the deliberate purpose of the Post Office Department and the proponents of this bill to place small papers of the Nation in jeopardy, we believe any plans for further advances in secondclass rates should be abandoned."

Newspaper in Terra Bella, Calif., the Terra Bella News: "This would increase my costs. to a point where I would seriously consider

going out of business."

Newspaper in West Branch, Iowa, the West Branch Times: "The proposed increase could easily put this newspaper out of business."

Newspaper in Welsh, La., the Welsh Citizen: "This would crucify many of we smaller papers whose profit margin would virtually vanish. Since our advertising and subscription rates are based on old mail rates this would be a foul blow."

Newspaper in Wahoo, Nebr., the Ludi Printing Co.: "Present mailing costs are \$880 annually. Under the proposed increase my

costs would amount to more than \$1,700 an-

Newspaper in Kansas: "Our newspaper is almost driven out of business now by high cost of labor and stock.'

Newspaper in Minnesota: "If we understand correctly, will have to pay 2 cents each on all local copies delivered by letter carriers in the suburbs. Most of ours run over 2 ounces 5,000 copies 2 cents equal \$100 per week. Now costs about \$8 per week including some 165 copies at zone rate. Adding \$92 to our costs would boost subscription price at least \$1.50 per year."

In closing, Mr. Chairman, we would like to emphasize again that the services which the weekly newspaper industry, through its individual newspapers, renders to its communities and its governments, local. State and national will I am sure continue just so long as there are newspapers in existence. There is no threat of reprisal, real or implied, in these comments. The stark and simple facts are, however, that declining income and the ever-narrowing margin between profit and loss that confronts all small town newspaper operations must force them to adopt new and more drastic economy measures to keep their businesses solvent and protect their own livelihood as well as the livelihood of those to whom they furnish gainful weekly employment.

We must protest as naive and entirely un-realistic, the assertion that, because we have been able thus far to absorb or pass on larger increases in costs of doing business, we can just as easily continue to do so by accepting with good grace this drastic increase in postal rate costs that is far higher than its proponents would have the country believe.

There is a limit to which our businesses, or any other business, can go in absorbing higher costs, and still remain in business. Many of our papers have long since reached the point of no return, so to speak, in high subscription rates and high advertising rates. Additional charges just cannot be made for the pure and simple reason that neither readers nor advertisers will pay them.

And so, Mr. Chairman, and members of the committee, while we recognize and deeply appreciate the problems of finance with which the Postmaster General is confronted and while we respect his earnestness in trying to resolve them, we, as small-town newspaper publishers, have no wish nor do we have the financial resources to help to the disproportionate extent that this rate schedule would insist that we do.

We are flattered at the many insinuations that our small business enterprises are as profitable as has been inferred in the verbal evidence and in the McKinsey study placed before you. But we must insist, gentlemen, that adoption of this schedule will work a very serious hardship on us and on the people of the United States.

At no time in the history of this great country of ours has there been a greater need for a free and unfettered press. We ask, gentlemen, that it be permitted to continue to serve the people and the country-and that this very damaging legislation be not approved by this committee.

Students, You're Suckers

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, April 28, 1960

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include an excellent editorial from the Enquirer of Cincinnati, Ohio, May 20, 1960:

STUDENTS, YOU'RE SUCKERS

The idealism and energies of youth are wondrous to behold.

But it makes a saddening picture when these qualities are recruited to serve the ugly intentions of men who despise the idealism they are prostituting.

We wonder how many students in the crowd pictured at San Francisco, after a battle with police outside the hearings of the House Un-American Activities Committee, realized they were being used by the Communists.

Perhaps none-and more's the pity.

They were holding aloft a placard read-g: "Witch Hunters Go Home."

Inside the city hall, a procession of witnesses were following the familiar fifth amendment response to questions concerning subversive activities.

The House Un-American Activities Committee does not question people aimlessly. It isn't hunting for witches. It is trying to shore up the defense of the Nation against a deadly fifth column.

In the ordinary course, the committee fol-lows a well-established trail of subversive or espionage activity. The witnesses sub-pensed have been found, through painstaking check by the Federal Bureau of Investigation, either to be participating in a subversive activity or else to have knowledge of

The typical witness who resorts to the fifth amendment does so for a very practical, rather than idealistic, reason. He knows certain evidence exists. He knows if he denies it under oath, and the facts show he

lied, he is subject to prosecution for perjury.

Alger Hiss, the extent of whose harm to
the Nation was immense, could not be convicted for wartime spying because he was not unmasked in time. But he was dealt with on the perjury count, and served a prison term in consequence. Later, party instructions went out to "take the fifth amendment" and answer no questions.

The gullible boys and girls of the San Francisco Bay area aren't likely to be proud. in time to come, of their role in calling members of the House committee "witch hunters." The sabotage of this commithunters." The sabotage of this commit-tee—which consists of men of unassailable character-has been one of the prime objectives of the Communist Party in the United States for several years. Professional Communists have followed the committee throughout this country, to Latin America and elsewhere, reviling the members and obstructing wherever possible the legitimate work of the committee.

When the "pros" do it, they know what they are doing. When students are tricked into the act, it compounds a tragedy.

These young people should know that they

are serving a cause which believes in using tanks and the hangman's noose on such as

Baring Criticizes Report of Secretary of Commerce

EXTENSION OF REMARKS

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, upon receipt of a copy of a report from the Department of Commerce on my bill H.R. 9802, before the House Public Works Committee, to prohibit the Secretary of Commerce from approving plans, specifications, and estimates for a specified portion of a route on the Interstate System in Nevada, and to prohibit further obligation or expenditure of Federal funds in connection with such route, I addressed a letter to the chairman of the special committee investigating the Federal aid interstate highway program, and another letter to the chairman of the full House Public Works Committee, explaining the many errors in the report submitted by the Secretary of Commerce. The full content of both letters follows:

MAY 18, 1930.

Hon, Charles A. Buckley, Chairman, Committee on Public Works, U.S. House of Representatives, Washington, D.C.

DEAR COLLEAGUE: I am attaching a copy of a letter I have addressed to Congressman JOHN A. BLATNIK, who is not only chairman of the subcommittee investigating the interstate highway program but who also chairmanned the subcommittee of the House Committee on Government Operations, which subcommittee investigated the Reno

situation. As I told Mr. BLATNIK, I am really tired of being dictated to by the executive branch of the Government. No bill receives a favorable departmental report unless it reflects the policies of the present administration, and even a bill such as H.R. 9802, which would simply freeze further funding of a section of interstate highway which represents overpayment of millions of dollars based on falsification of scientific data, is Violently opposed by the Department.

I firmly believe that a general review of the development of and the use of cost-benent ratio should be scheduled before your subcommittee, because, I would say without hesitation, the abuse of cost-benefit ratio is responsible for more planned waste in the interstate program than the lack of ade-quate Federal controls, or in fact any other area of inquiry that might be scheduled by your subcommittee.

Again, I officially request the opportunity to appear before the John Blatnik subcommittee to testify on this subject.

Sincerely,

WALTER S. BARING. Congressman for Nevada.

MAY 18, 1960.

Hon. John A. BLATNIK, Chairman, Special Subcommittee, Public Works Committee,

U.S. House of Representatives, Washington, D.C.

DEAR COLLEAGUE: I have carefully read the eport of the Secretary of Commerce on my bill H.R. 9802 "to prohibit the Secretary of Commerce from approving plans, specifications, and estimates for a specified portion of a route on the Interstate System in Nevada, and to prohibit further obligation or ex-Penditure of Federal funds in connection with such route."

This report is nothing but a lot of gobbledygook. First of all, I should like to make reference to House Report 202 of the 86th Congress, 1st session, which is a report based on hearings before your sub-Committee under the House Committee on Government Operations during the early months of 1959 in Reno. Now, let us take accernal of the points covered in your report:

The Secretary of Commerce in his letter of May 12 stated that "the action of the State and of the Bureau of Public Roads was supported in a report by the Committee on Government Operations of April 23, 1959,

and based upon a hearing held by that committee in Reno in February, 1959. The committee also found that there had been no illegal procedures followed by either the State highway department or the Bureau of Public Roads in the selection and approval of the route."

On page 15 of your report, in discussing "notice of public hearings" you comment that "the above notice could hardly be described as being 'chuck full of information.'
The designation 'IN-001-1(12)' may have some significance to the State highway department, but very little to the public the newspaper notice in itself would appear to be insufficient." For legal purposes an insertion in a newspaper is sufficient public notice. I doubt seriously whether distribution to a subscription list, as was done by the chamber of commerce would satisfy the legal concept of "public notice."

2. On page 17, of your report, in discussing "Line J-Verdi: Coercion and Pressure," you commented "The statements contained in the telegrams addressed to the Washoe County Board of Commissioners from officials of the Bureau of Public Roads were obviously designed to influence action that accorded with earlier State and Bureau of Public Roads approval of line J. Certainly a local body faced with a telegram that line J is the 'only location acceptable for the expenditure of interstate funds' has little room for deliberation." You attached no sinister motives to the action of the Bureau in the above regard. I do not believe that the Bureau's motivations had anything to do with the matter. Influence is influence, coercion and pressure remain unchanged by motiva-tion, and the fact remains that the Bureau of Public Roads did coerce or influence, as you may wish to label it, the board of county commissioners in their approval of line J-Verdi. This is clearly contrary to the spirit of the Federal Aid Highway Act of 1956-58.

3. The Federal Aid Highway Act of 1956-58 requires that the economic impact be considered in route selections. On page 14 of your report, under the caption "Economic you commented that "Except for Effects." some testimony on tax revenue loss to Reno, as the result of approval of the Third Street route, the record contains little discussion of the economic effects with respect to the Sparks area presented by witnesses supporting the routing in that area; but testimony of local and State officials is silent on this point." Now, the Secretary of Commerce states that "The committee [Committee on Government Operations] also found that there had been no illegal procedures followed by either the State highway department or the Bureau of Public Roads in the selection and approval of the route." My bill, H.R. 9802, covers both line J-Verdi and Third Street, Reno. I maintain that the Secretary's report is not based on fact and, therefore, has absolutely no value. ther, I have had computed the cost-benefit ratios based on accepted mathematical formula and the figures presented to your committee by the Bureau of Public Roads and shown on page 10 of House Report 292 and found that the cost-benefit ratio of 4.6, line O, as tabled, is grossly exaggerated and I have charged that the Bureau of Public Roads falsified scientific and engineering data in their testimony before your com-mittee. This charge remains unrefuted and has for the past several months. Yet in you note that in matters requiring technical knowledge great reliance is placed on expert opinion and that "the failure of the North Rim proponents to present expert opinion to support their position in this very technical matter militates against according greater weight to this position.

4. Again on page 17 of House Report 292, "line J—Verdi: Coercion and pressure," you

say "the record is not clear as to why the State approved line J in advance of the public hearings nor why the Bureau of Public Roads had acquiesced (on February 21, 1957) in State approval in advance of these hearings." I am at an absolute loss to know why in your judgment this was not immediately recognized as a violation of law. Under Section 116.1: Declarations of Policy With Respect to Federal Aid Highway Program, subparagraph (c) Public Hearings, it is clearly stated that "any State highway department which submits plans for a Federal aid highway project involving the bypassing of, or going through, any city, town or village, either incorporated or unincorporated, shall certify to the Commissioner of Public Roads that it has had public hearings, or has afforded the opportunity for such hearings, and has considered the economic effects of such a location." This requires no further comment or clarification, the law is clearly stated and the facts are clearly in violation and again the Secretary of Commerce, based on House Report 292, said that "the committee also found that there had been no irregular procedures followed by either the State highway department or the Bureau of Public Roads in the selection and approval of the route." This statement was again lifted from the committee report.

I maintain that our leading engineers and other so-called experts are charged with a very grave responsibility, and falsification of technical data is a violation of the highest order. The selection of the Third Street route was accomplished largely through the submission of technical data, while the failure of the North Rim proponents to present expert opinion to support their position in this very technical matter militated against according greater weight to that position. Distorted and falsified expert opinion is far more damaging than no expert opinion at all. We must raise the moral fiber of our country, both at public and private levels, and I sincerely trust that, in your further investigations of the interstate highway scandals you will look beyond the word of so-called experts and no longer accept their word in blind faith. I shall, of course, continue to oppose any further planning or construction of that section of interstate highway described in my bill, H.R. 9802, with all the strength that I possess.

I am tired of having Congress run by reports from bureaus within the executive branch of the Government. Congress enacts laws and in the final analysis it is the people who pay the bills and if we in Congress are to consider the views of the executive departments, it is their responsibility to report to us truthfully and accurately which. in the instant case, the Secretary of Com-merce has failed to do. Since cost-benefit ratios are given so much credence in the selection of specific routing I urge that your

subject.

Sincerely,

WALTER S. BARING, Congressman for Nevada.

P.S.—Please consider this as an official request to appear before your committee on cost-benefit abuses.

committee make a thorough study of the

Bomarc B Scores New Successes

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 18, 1960

Mr. PELLY. Mr. Speaker, under unanimous consent, I include for printing in the RECORD a dispatch which has just reached me of another Bomarc B successful firing. Obviously, technical difficulties which were encountered in earlier tests have been eliminated:

Two USAF IM-99A Bomarc air defense missiles successfully defended the country against a simulated sneak attack on the U.S. mainland this morning when they scored explosive detonation intercepts on a supersonic missile target and a remote-controlled jet fighter target.

Radar picked up the subsonic target approaching the United States at 30,000 feet. The first missile was fired via the SAGE system. The second, and even greater threat, was a supersonic missile spotted by radar at 19,000 feet. The second Bomarc was sent to destroy this new target. Within minutes, the two Bomarcs intercepted the two targets. Proximity fuses triggered warheads as they passed within several feet of their targets. Had the Bomarc missiles been equipped with atomic warheads both targets would have been destroyed.

Dr. Eric A. Walker, President, Pennsylvania State University, Lauds National Defense Education Act as a Highly Successful Program of Educational Benefits and Urges Continued Support by Congress

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. VAN ZANDT. Mr. Speaker, the success of the National Defense Education Act of 1958 is being acclaimed throughout the Nation by educators and students who have been the beneficiaries of a law that was enacted for the purpose of strengthening the national defense and encouraging and assisting in the expansion and improvement of educational programs to meet critical national needs. Among the enthusiastic supporters of the National Defense Education Act in the field of education is Dr. Eric A. Walker, president of the Pennsylvania State University located in my congressional district.

The law enacted by the 85th Congress is known as Public Law 85-864 and is a comprehensive program whose features include loans to students in colleges and universities, financial assistance for strengthening science, mathematics, and modern foreign language instruction. The law also provides for national defense fellowships, guidance, counseling and testing, and identification and encouragement of able students. Research and experimentation together with area vocational education programs and science information service are among other features of the National Defense Education Act.

According to Dr. Walker the students at Pennsylvania State University have benefited tremendously during the 1959-60 academic year. He reports that lively interest was shown in graduate fellowships and the guidance-counselor institute, as evidenced by the number of inquiries and applications received by the Pennsylvania State University.

In a letter to me dated May 17, 1960, President Walker stresses "the most spectacular results were the loan programs," and he proceeds to give an interesting berakdown of the number of requests and the number of loans granted to men and women.

Dr. Walker, who is recognized as being among the Nation's leading educators, concludes that the National Defense Education Act is highly successful and has benefited hundreds of students. At the same time he points out that many students could not be helped because of the limitation of funds available to be loaned.

Dr. Walker's interesting and informative letter follows:

PENNSYLVANIA STATE UNIVERSITY. University Park, Pa., May 17, 1960. The Honorable James E. Van Zandt, House Office Building, Washington, D.C.

DEAR JIMMIE: Some time ago I wrote you a letter suggesting certain modifications in the National Defense Education Act. Now that we have nearly 2 years of experience administering certain provisions of the act, we want to tell you that it has been a successful program and we strongly urge your continued support.

The students at the Pennsylvania State University have benefited tremendously during the 1959-60 academic year by the provisions of the act.

1. During the 1959 summer session, 40 teachers participated in a guidance-counselor institute. This number was selected from 226 applications received from 22 States. In addition, there were 472 other inquiries from 35 States. The amount allocated for this institute was \$35,696.

2. Nine national defense graduate fellowships, four in philosophy and five in political science, were awarded during this school year. These fellows were selected from among 35 actual applicants and there were many more inquiries. Each fellow received a stipend of \$2,000 plus tuition and certain dependency allowances

3. We requested 20 fellowships for a general program in the preparation of college teachers but were not awarded the program. During the time of negotiations, more than

50 applications were received.

4. The university was awarded five separate research projects with a total allocation of \$420,400. These projects relate to the effectiveness of teaching and involve varying numbers of faculty members and graduate students.

5. The most spectacular results were the loan programs:

Men: 962 men requested loans totaling \$611,716. The average loan request was for \$635.87.

Loans were approved for 573 students and the total amount loaned was \$214,180. The average loan was \$373.78; and the range was from \$100 to \$1,000.

Women: 365 women applied for loans in the amount of \$117,763. The average loan request was for \$322.63.

Loans were approved for 329 women to the extent of \$69,035. The average loan was \$209.33, ranging from \$50 to \$1,000.

Thus, it is clear that hundreds of students have benefited directly and materially from the NDEA. In addition, many students could not be helped because of the limitation of the funds available to be loaned. Should you have any questions concerning our experience with the act, we shall be glad in-

deed to hear from you. We appreciate your support for this splendid piece of legislation. Sincerely yours,

ERIC A. WALKER, President.

When Will the Editors and Publishers of This Country See Through the State Department's Flimsy Excuses for Not Arranging a Newsmen Exchange With China?

> EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. PORTER. Mr. Speaker, if the Department of State wanted to arrange it, a newsmen exchange with China could be a reality in a very few days. However, the administration insists that the Chinese journalists should file individual applications but the administration refuses to agree to exchange a certain number of newsmen with China.

I wonder how long the editors and publishers in the United States will allow the administration to get away with their protestations that the fault is with the Chinese Government, not with itself? Not much longer, I sincerely hope, because now more than ever we need to increase our communication with China.

We need China in any disarmament agreement. With increased communication it may be that we stand a better chance of averting war with China.

Of course, it is clear why the administration does not want to have a newsmen exchange, despite their statements to the contrary. The administration knows that the present China policy of "containment by isolation" could not survive very long after our top journalists began sending back their own dispatches from China about conditions there.

Under unanimous consent I am including hereafter a copy of my letter of May 4 to the Secretary of State, a copy of a news story in the New York Times for May 3, 1960, Assistant Secretary Macomber's reply of May 19, and my letter of May 24 to the Secretary:

> HOUSE OF REPRESENTATIVES, Washington, D.C., May 4, 1960.

Hon. CHRISTIAN A. HERTER,

Secretary of State, Washington, D.C.

DEAR MR. SECRETARY: I enclose a copy of a New York Times story (p. 2), May 3, 1960, about the status of the proposed United States of America-China newsmen exchange I assume that the account is accurate and that the source is the Department of State.

As I have stated to you previously, it seems clear that if the administration really wanted a newsmen exchange with China, it could be arranged. I agree that the Chinese could if they were eager for this exchange, arrange for their newsmen to file individual applications.

It is true, of course, that the Chinese could file individual applications. It is also true that we could sign an agreement with China for such an exchange on given number basis-If it is legal, as I believe it is, for the

Department of State to agree to give favorable consideration to an individual request for a visa, then it would seem legal to make an agreement to do this for any reasonable number.

If it is not legal, and if in fact we do want an exchange of newsmen with China, then the Department of State should request the Congress to revise the law appropriately.

The proposed concession would cost us nothing. It might gain us an opportunity to have an exchange of newsmen, a valuable first step toward decreasing the chances of war and increasing the prospects for peace.

If the Chinese should refuse to make such an agreement, the proof of their unwillingness could be communicated tellingly to all the world.

Our officials say that we want the newsmen exchange with China. Our clinging to a frail technicality seems to contradict those words and to demonstrate an unwillingness on our part to make the exchange a reality.

Therefore, I urge that you consider carefully making an agreement along the lines requested by Premier Chou and at last bringing about an exchange of newsmen between the United States and China.

Sincerely,

CHARLES O. PORTER, Members of Congress.

[From the New York Times, May 3, 1960] U.S. BELIEVES CHOU HAS KILLED HOPES FOR NEWSMEN EXCHANGES

Washington, May 2.—Premier Chou En-lai is regarded here as having killed any linger-ing hopes that U.S. newsmen might soon admitted to Communist China.

Officials say the Premier made it unmistakably clear in Nepal Thursday night that Peiping wanted to use the issue of the newsmen to force the United States into de facto recognition of the Communist regime. They said the way had been open for a long time for Chinese and U.S. reporters to re-Port from each other's countries, if that was all Peiping was interested in.

At Katmandu, Nepal, Premier Chou was asked whether U.S. correspondents would be permitted to visit Communist China.

According to a broadcast from Peiping, Mr. Chou answered, "The two Governments must sign an agreement on the mutual ex-change of news correspondents" before any exchange of reporters could take place,

EQUAL NUMBERS ASKED

For some time the United States has been discussing the matter with the Chinece in Each time the subject is raised, Peiping demands a U.S. pledge that an equal number of reporters from the two countries will be admitted.

The United States has replied that its immigration laws prohibit a blanket promise that any given number of visa applications would be approved without reference to the individuals concerned. The United States has said repeatedly, however, that it would give favorable consideration to any application from the consideration of the consideration from t tion from bona fide Chinese newsmen.

NO OTHER PACT KNOWN

Washington concludes that Pelping is not interested in news coverage but only in using the issue to press for a formal agreement with the United States. Peiping has no such agreement with any other country, as far as is known here.

Also at Katmandu, a reporter asked if he could visit Tibet. Mr. Chou inquired if he was Nepalese. The reporter said he was Indian

"Oh, that is another matter," Mr. Chou replied. "You will have to wait for some

The Premier then said that Prime Minister Jawaharol Nehru of India had just

described China as "an aggressor" and that the Chinese were "very much distressed" by that attitude.

> DEPARTMENT OF STATE, Washington, May 19, 1960.

Hon. CHARLES O. PORTER,

House of Representatives.

Dear Mr. Poeter: I have your letter to the Secretary of State of May 4, 1960, in which you raise the matter of a possible U.S. agreement with Communist China to permit a reciprocal exchange of newsmen.

In reply to your question concerning the accuracy of the May 3 New York Times item outlining the Department of State's posi-tion on this matter, I refer you to the De-partment's Press Release No. 203 of April 20, 1960, a copy of which I am enclosing for your information. It was stated therein that:

"It should be noted that the United States has never had such an agreement [for a reciprocal exchange of newsmen] with any other country. Nor has the Pelping regime apparently found it necessary to conclude such an agreement, even with those countries where it has no diplomatic relations and where journalists of its official New China News Agency operate, i.e. France and Cuba. It is obvious that Peiping is seeking to use the issue of news representatives in an effort to force the United States into a formal agreement to improve the prestige of the Chinese Communist regime."

Chou En-lai's words in Katmandu make it clear beyond any shadow of doubt that the Chinese Communists are, in fact, attempting to exploit the exchange of newsmen issue for political purposes. It is equally clear from Chou En-lai's words that the Chinese Communists are not interested in helping to bring about a relaxation of tension between the United States and the Pelping regime by means of an exchange of this nature. pointed out in both the New York Times item and the Department's press release, if the Chinese Communists were sincerely interested in mutual news coverage, they long since could have taken advantage of the provisions which already exist under U.S. law to arrange for entry of their newsmen to the United States. The Department's views concerning its obligations under the law are as

quoted in the press release.

The United States is, of course, anxious to take every feasible and practicable step toward bringing about a decrease in the chances of war and an increase in the prospects for peace. With respect to your suggestion that an exchange of newsmen might be such a step, you might be interested in knowing that the Chinese Communists have recently forcefully reiterated their absolute rejection of peaceful coexistence between themselves and what they term the im-perialists (their expression for the United States and its allies) as a matter of basic Communist doctrine. In an article published in the Chinese Communist Party Central Committee journal Red Flag on April 15, 1980, the leaders of the Peiping regime wrote that as dedicated Marxist-Leninists they believe in the absolute correctness of Lenin's teachings, and hence maintain that as long as imperialism exists, war is inevitable between it and the socialist countries. (In this latter category they include only themselves, the Soviet Union, and the other countries of the Communist bloc.) Accordingly, Peiping's leaders called for a protracted struggle against the United States and Its allies which would be "bloody and bloodless, violent and peaceful, military and economic, educational, and administrative," and in which an outright war between imperialism and socialism should be regarded as just.

With respect to the Chinese Communist position (now stated categorically by Chou

En-lai) that the United States must sign an agreement on the mutual exchange of newsmen before such an exchange can take place, the Department of State considers this unreasonable because, as mentioned above, such an agreement is not necessary and the United States does not have agreements with other countries on the exchange of newsmen. So far as we can determine, neither does Communist China. If a country with which the United States had friendly relations were to advance some reason why a special agreement on newsmen were necessary, we would of course give such a request sympathetic consideration. However, in this case we have consideration. However, in this case we have a regime which is avowedly our enemy de-manding without real justification that we depart from our usual practice and make a special exception in its favor. At the same time this regime rejects out of hand our contention that an equitable basis for admission of newsmen exists within our legal framework without a special agreement. We are forced to conclude that the Chinese Communists are not interested in the issue of newsmen except as a political weapon and that were such an agreement to be signed. there would still be no assurance that our newsmen would be admitted to Communist China. Having erected one artificial barrier, the Chinese Communists could easily find other pretexts to keep our newsmen out. I think that the above considerations,

which argue strongly against our submitting to the Chinese Communist demand for a signed agreement on newsmen, argue even more strongly against requesting special legislation designed to make possible the signing of such an agreement.

I trust that the foregoing information will be of use to you. Please inform me if I can be of any further assistance in this matter.

Sincerely yours, WILLIAM B. MACOMBER, JR., Assistant Secretary.

MAY 24, 1960.

Hon. CHRISTIAN A. HERTER, Secretary of State, Washington, D.C.

DEAR MR. SECRETARY: Thank you for Mr. Macomber's letter in your behalf dated May 19, 1960.

It is plain from this letter that there is no legal reason why an agreement cannot be made with the Chinese for a newsmen exchange. I repeat my recommendation that we make this agreement and either bring about this exchange or, if the Chinese on some pretense balk, demonstrate dramati-cally the bad faith of the Chinese Communist government.

No one denies that the Chinese Communists are guilty of many unreasonable acts and issue many unreasonable statements.

Mr. Macomber's objection to making such an agreement is that it is "unreasonable" because no such agreements have previously been made by the United States, and China has not asked for such an agreement from other nations. What difference does another "unreasonable" position make?

If we believe that a newsmen exchange is in our best interests, and I do—and our Government says it does—then I say we should make a "special concession" and depart from our usual practice.

If the Chinese erect another artificial barrier, as they may well do, let us deal with it in due course. I repeat, if our Government wants a newsmen exchange with China, we ought to agree to the Chinese terms asking for an agreement. I hope the matter will be reconsidered.

Very truly yours,

CHARLES O. PORTER, Member of Congress.

Consumers Pay for Brainwash Job by Private Utilities

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, it has long been my contention that electric consumers should not have to pay to be brainwashed by the utility industry. During the 85th Congress, I introduced two bills which provided that the cost of the private power companies' propaganda advertising campaign could not be passed on to their consumers and could not be deducted from taxes as an operating expense. Unfortunately, Congress did not act on these measures, and the consumer continues to foot the bill for his own brainwashing.

An editorial in the May 23, 1960, issue of the Capital Times, Madison, Wis., calls for an investigation of the activities of the power lobby. Under leave to extend my remarks, I would like to include this editorial in the Record:

TIME FOR A THOROUGH PROBE OF UTILITY LOBBY ACTIVITIES

The revelations about relations between members of the Federal Power Commission and natural gas agents raise the question of whether it is not time again for another thorough investigation into the activities of utility interests.

utility interests.

Public Power, the publication of the American Public Power Association, has a lead article in its most recent issue calling for such a probe on the grounds that the "brainwashing" activities of the power lobby far exceeds anything done in the scandals that shocked the Nation a quarter of a

century ago.

Twenty-five years ago the Federal Trade Commission investigated utility activities and came up with some shocking findings about the use of money to influence politics and public opinion. Crude bribery of public officials was shown, as well as the use of money to pipe propaganda into schools and churches.

In recent years the utility industry has been conducting a massive propaganda campaign to equate public ownership of utilities with "socialism." This strategy was devised for the electric companies advertising program (ECAP) by the big advertising agency, N. W. Ayer & Son, Inc.

A public opinion poll showed that the public favored specific public projects such as TVA and REA, but opposed socialism. So the fight began against socialism.

No one knows how many millions have been spent on this campaign to discredit public power projects by equating them with socialism. The advertising agency has estimated that \$100 million has been spent in newspaper advertising alone. Millions more have gone into national media, such as magazines. The FPC has said that 26 ECAP ads in the Saturday Evening Post cost \$1,996,000.

It is known, however, that this cost has been passed on to the consumer in the rates he pays. These costs are included as part of the cost of operation and are deducted from taxes.

Not satisfied with the millions they were spending on ECAP, the utilities formed a second propaganda organization called the public information program (PIP). The public relations firm of Bozell and Jacobs was retained to handle the propaganda.

The public pays the cost of this program, as well. As Senator Kepauvez has put it, the consumers have been paying for their own brainwashing.

Congress, which always seems so eager to investigate anything that will produce a crop of headlines, could serve a good purpose by looking into this situation. But it won't,

More Support for a 5-Year Census

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. UDALL. Mr. Speaker, the intense eagerness with which Americans are awaiting the results of this year's decennial census to learn the population of their communities and States is an indication of how vital these data are to the business community, school planners, and governmental units.

But in many of our States—those which are growing most rapidly—this year's figures will be outdated almost before the final figures attain general publication

in atlases and encyclopedias.

For that reason, my bill (H.R. 1976) to conduct a population census every 5 years is attracting increasing attention and support. As evidence of this, I am inserting at this point, under leave previously granted, editorials from a Phoenix, Ariz., television station, KOOL-TV, and from the Arizona Daily Sun, whose publisher, Platt Cline, is a newspaperman who has witnessed at first hand Arizona's phenomenal growth over the past 15 years.

The editorials follow:

There's a plan under consideration in the U.S. House of Representatives that seems to have considerable merit, especially to citizens in the fast-growing State of Arizona. This bill would empower the Federal Government to take a limited census every 5 years, instead of the current decennial census.

Arizona's congressional Representative from the second district, Stewart L. Udall, has introduced such a bill, but expects no action on it this year. However, it has been sent to a House subcommittee and hearings will be held later this year on the proposal. There is plenty of time to consider the proposal carefully since the first 5-year census under the new bill would not take place until 1965.

But, it seems like a good idea to start thinking about the matter now so it can be pushed when Congressman UDALL introduces it again next year following the hearings. The story of growth revealed by census statistics is interesting, but—more than that—the story is extremely useful to business, industry, and Government at most levels.

In Arizona, for example, the distribution

In Arizona, for example, the distribution of State shared tax revenue depends on the latest census figures. But, the continuing important and rapid shifts of population throughout the Nation, particularly in Arizona, may make these 1960 totals outdated long before 1970 rolls around. In fact, 15 Arizona communities have had special censuses since 1950 in order to get more up to date totals.

Though increasing their share of the State sales tax may have been the primary reason,

a more realistic total was sought for other reasons, among them the need for a larger work force in order to attract industry. Businessmen and manufacturers are shifting locations and establishing new plants almost as rapidly as individuals are changing their places of residence.

Imagine the distorted picture a manufacturer would get if he had only the 1950 census to go by: Yuma, 9,145; Winslow, 6,518; Flagstaff, 6,771; Prescott, 6,764; Tucson, 45,454, and Phoenix, 106,818—to name just a few. The Director of the Census has stated that a 5-year census would be very valuable and said it would cost less than half of the \$118 million appropriated for this year's census. Many Arizona cities: Tempe, Coolidge, Tucson, Sierra Vista—plus other cities have offered support for this plan along with numerous municipal leagues and other organizations.

A resolution adopted by the American Municipal Association says in part: "Because of the continuing high rate of population increase and the highly mobile nature of our population, we recommend to the Congress that they institute a quintennial full census of the population."

What do you think?

[From the Arizona Daily Sun, Apr. 4, 1960]
LIMITED 5-YEAR CENSUS

Congressman Stewart Upall, Democrat, of Arizona, has introduced legislation providing for a limited census each 5 years.

If this measure became law, it would be of vast benefit to Arizona and other fast-growing States in the Southwest and West.

ing States in the Southwest and West.

The totals resulting from this year's census may be as out of date in 2 or 3 or 5 years as the 1950 figures become in the early fifties.

As UDALL pointed out, imagine the distorted picture a manufacturer would get if he had only the 1950 centus to go'by: Flagstaff, 6,770; Winslow, 6,581; Prescott, 6,764; Tucson, 45,454; and Phoenix, 106,818.

This year the towns and cities listed above will show immense gains over the 1950 figures. And there is no reason to believe that they will not continue to grow at their present rate, at least for a time.

It would seem that the census bureau would have some scientific system of sampling population on a limited basis that would provide really accurate figures for the totals.

At any rate, UDALL's proposal is of great importance to Arizona, and it is gratifying to learn that there is strong support in Congress for the measure.

Let's Pinpoint the Need in Medical Care

EXTENSION OF REMARKS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following editorial from the Binghamton (N.Y.) Press, May 11, 1960:

POLITICIANS SEEK VOTES, NOT SOLUTION

The issue of medical care for the aged passes from preliminary skirmishing to the main battle which will be waged more to the end of buying votes than to solving a serious social problem.

A phase of the battle will be joined when the American Medical Association plays host on Friday to social welfare specialists of labormanagement, government, and various health

insurance groups in Chicago.

The AMA stands adamantly opposed to the Porand bill, and well to the right of the administration's voluntary Medicare proposals. Its own program has as principal features expansion of voluntary health in-surance and prepayment plans, such as Blue Cross, and liberalization of existing old-age assistance programs.

The Forand bill would extend the social security system to provide medical care for persons over 65. The program would be financed by raising the social security payroll tax by 14 of 1 percent each for employers and employes.

The Eisenhower plan calls for Federal and State subsidies of insurance systems to be established by the States. The estimated cost of \$1,200 million a year would be shared equally by the Federal Government and the States.

In an election year the emotion-charged issue is certain to get progressively hotter. The problem of providing medical care for those over 65 is yet to be clearly defined. Instead of such definitions, the issue is becoming a political football, with the possibility that legislative action to be taken will have greater focus on gaining votes than on solving the problem in its true dimensions.

The problem could be solved by pinpointing the need and meeting that need, without founding a huge new bureaucracy which in natural course would evolve socialized medicine. A

At the moment the prospects are that the Democratic majority, not seeking a solution but a campaign issue, will pass a Forand-type bill, which the President will veto. Then in the campaign will come great hue and cry over the failure to meet a need, Which the politicians themselves never recognized as more than an issue for political exploitation.

Postmaster General Summerfield Defends Request for Equitable Postal Rates

EXTENSION OF REMARKS OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. REES of Kansas. Mr. Speaker, on May 25 there appeared an advertisement in the Washington Post and other newspapers that criticized the Postmaster General with respect to his proposal for increased postage rates. I addressed a letter to General Summerfield asking for an explanation if he cared to make one. I am including a copy of my letter to the Postmaster General, together with his statement in reply thereto:

MAY 26, 1960.

Hon. ARTHUR E. SUMMERFIELD, The Postmaster General, Post Office Department, Washington, D.C.

DEAR GENERAL SUMMERFIELD: The Business Mail Foundation, 130 East 59th Street, New York, N.Y., has inserted a full page ad on page D-5 of the Washington Post for Wednesday, M. C. and March Dogs. day, May 25, 1960, entitled, "How Much Does Your Mail Mean to You?"

It seems to me that several of the statements contained in this full page advertisement are conflicting with some of the testimony that has been presented to our Committee during the current hearings on the proposed postal rate increases.

I would appreciate receiving your comments on the contents of this advertisement. With kind person regards, I remain

Sincerely yours.

EDWARD H REFE

STATEMENT BY POSTMASTER GENERAL ARTHUR E. SUMMERFIELD IN RESPONSE TO AN IN-QUIRY FROM CONGRESSMAN EDWARD REES OF KANSAS, RANKING MINORITY MEMBER OF THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE

A selfish interest group which is enjoying a huge, hidden postal subsidy at the expense of all American taxpayers has today begun a campaign to perpetuate that subsidy by attacking without conscience the U.S. Post Office Department, and thus the U.S. Government.

The attack is made in full page advertisements by a group of members of the direct mail industry, whose enjoyment of postal rate subsidies has totaled hundreds of millions of dollars during recent years.

This advertisement is an insult to the intelligence of the Ameriacn people and the Members of Congress. It is filled with misstatements of fact, false innuendoes, and

muddled doubletalk.

It piously masquerades as a statement in the public interest, never once making reference to the special purpose of its sponsors, which is to persuade public taxpayers to continue paying a large part of the sponsors' own postal costs.

It does not state, for example, that 75 percent or more of all the mail handled by the Post Office Department is business mail. does it state that the great bulk of the responsible business community of the Na-tion has expressed its support of the postal rate increase sought by the Post Office De-

partment.

The Eisenhower administration and the Post Office Department will continue to fight for equitable postage rates on all classes of mail which will place the Department on a more nearly self-supporting basis, by elim-inating these unconscionable subsidies and providing fairer treatment to the American taxpavers.

Port of Baltimore

EXTENSION OF REMARKS OF

HON. DANIEL B. BREWSTER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. BREWSTER. Mr. Speaker, the House of Representatives has passed the 1961 public works appropriation bill. The bill includes a \$1,500,000 appropriation to begin work on the widening and deepening of the Baltimore channel. It also contains the sum of \$103,000 for additional studies and planning for improving the Chesapeake and Delware Canal. Both of these sums are grossly inadequate, if we consider the importance of the projects to which they are assigned.

The urgent necessity for deepening and widening the Baltimore channel and the Chesapeake and Delaware Canal has long been recognized. The increased use of large deep-draft vessels in world trade makes the improvement of these two vital arteries imperative. The depth of the present Baltimore channel is 39 feet, with a general width of some 600 feet. The Chesapeake and Delaware Canal is presently 27 feet deep, with an average width of 250 feet. The volume of traffic in the canal exceeds the safe capacity of that waterway, and there has been an unfortunate record of long delays, groundings, and collisions.

The U.S. Corps of Engineers, after extensive studies and surveys, has strongly recommended that Baltimore's channel be deepened to 42 feet and widened to 800 feet. The Corps of Engineers has also recommended that the Chesapeake and Delaware Canal bewidened to 450 feet and deepened to 35 feet. These improvements would mean tremendous savings to ship operators, and would benefit not only the Port of Baltimore, but also the Port of Philadelphia, and all others using these waterways.

Congress recognized the need for the improvement of the Chesapeake and Delaware Canal in 1954, when it authorized the deepening of the canal from its present 27-foot depth to a depth of 35 feet, and its widening from 250 to 450 feet. In 1958, Congress also authorized the deepening of the main channel in the Chesapeake Bay and Baltimore Harbor proper from 39 to 42 feet, and the widening of the channels from 600 to 800 feet.

Sufficient funds, however, have never been authorized for these projects. The Baltimore Harbor project has the highest benefit-to-cost ratio, almost five to one. of any such project in the United States. In addition, the Maryland Port Authority and Maryland industries are spending millions of dollars to improve the facilities of the port. This tremendous expenditure of money and effort will be of limited benefit unless the channel is improved to allow the full range of modern vessels to enter the port and use its facilities

The world seaport of Baltimore is the largest bulk cargo port in the United States. It is the second largest seaport in the United States in terms of total tonnage of shipping using the port. Baltimore Harbor has the largest combined deep draft ore carrier and tanker traffic in the United States.

Baltimore's facilities for the handling of bulk cargoes is unequalled in any other port in the United States. The port area contains four huge modern ore plers, three large coalbins, three waterfront grain elevators with more than 13-million bushel total capacity and extensive modern facilities for the handling of fertilizer, chemicals, produce, and similar commodities.

The Locust Point Marine Terminal of the Baltimore & Ohio Railroad is the largest privately operated marine terminal in the United States. The terminal yard has a capacity of 3,500 freight cars. There are 10 piers, a grain elevator with storage capacity of 3,800,000 bushels, a latex storage and receiving plant with a capacity of 1,750,000 gallons, and many other facilities. The Sparrows Point plant of the Bethlehem Steel Co. is the largest steel plant in America and the largest tidewater steel plant in the world. This huge plant requires over 30,000 tons of iron ore per day in order to fulfill its annual capacity of over 8 million tons of

steel ingots. The list of similar and related port facilities and industrial plants is almost endless. In addition, Baltimore offers the finest facility on the east coast for the repair and servicing of merchant ships. The plants of the Maryland Shipbuilding & Drydock Co. and the Bethlehem Sparrows Point Shipyard make Baltimore one of the major shipbuilding and ship repair centers of the world.

Baltimore's port is unique among North American seaports in that it has two deepwater routes to the sea. The northernmost route is through the upper Chesapeake Bay and thence through the Chesapeake and Delaware Canal to the Delaware Bay. The other route is the southerly course down the Chesapeake Bay to the open ocean at Hampton Roads, Va.

The port of Baltimore, with its maritime and related commercial activities, is the dominant factor in the economy of the entire State of Maryland. The maintenance and expansion of the port is vitally important to the job security of some 600,000 persons employed in the Baltimore metropolitan area. Over onethird of Baltimore's industrial employment of 200,000 is direct port-connected employment. These waterfront industries employ over 65,000 persons who annually earn over \$350 million in wages and salaries. Less directly, Baltimore's harbor is responsible for the employment of thousands upon thousands of people in inland areas of our country who work for freight forwarding and handling concerns and the countless industries who depend upon Baltimore as a source of vitally needed raw material.

In the 250 years of its existence, well over a billion tons of cargo from all over the world have flowed through this port in a constant stream, feeding the insatiable raw-material appetite of America's industrial complex. Each year some 6,000 ships carrying over 30 million tons of export-import cargoes serve this inland port. Baltimore has achieved worldwide recognition for its use of modern methods and facilities in cargo handling and its impressive record for safe and speedy servicing of vessels at its piers. The port of Baltimore can berth over 90 cargo-going vessels at the same time.

Baltimore offers special handling for specialized cargoes. The bulk sugar pier of the American Sugar Refining Co. has made possible the import of bulk sugar where previously all sugar had to be shipped in in bags. The new \$4 million fruit pier, owned by the Maryland Port Authority, can accommodate 50 freight cars and handle over 4 million bunches of bananas a year. All areas of the port offer integrated rail-to-ship and truck-to-ship piers for fast, efficient handling of cargo.

Maryland's congressional delegation has vigorously urged the adequate financing of port improvements. Last year the needed appropriation was denied because of the President's announced policy of opposing any "new starts" in public works projects.

This year the President's budget recommended \$1,500,000 for the Baltimore Channel project, and \$103,000 for the C. & D. Canal project. These requests are shortsighted, unrealistic, and woefully inadequate. Experts agree that at least \$7 million is needed this year to even begin to ease the Baltimore Channel problem.

The administration's request for \$103,-000 for the C. & D. Canal project makes even less sense. This amount will only be for some additional planning studies; no construction work will be begun this year. The time has come to stop studying the problem and come to grips with it. The district engineer has stated that \$1,200,000 can be effectively used at once to start work on improving the canal.

In addition to their tremendous economic importance, both the canal and the harbor project have particular significance from the standpoint of national defense. Use of the canal saves 286 nautical miles on the trip from Baltimore to Philadelphia. It also provides a protected inland route between the naval bases at Philadelphia and Hampton Roads, Va.

During World War II and the Korean conflict the port of Baltimore was extensively used for the shipment of equipment and munitions to our troops overseas. Our country becomes increasingly more dependent on foreign sources for strategic raw materials—particularly iron ore and petroleum. It is surely in the interest of national security that these materials continue to flow freely through this port.

In 1958, the Public Works Committee authorized \$28,161,000 for improvement of the Baltimore Harbor channel. To date not one penny of this money has been spent. It we proceed at the snail's pace indicated by the President's request, it will take 18 years to complete the work.

In April of this year, the Maryland delegation, the chairman of the Maryland Port Authority, and representatives of Maryland industrial and maritime interests, appeared before the Appropriation Committee's Subcommittee on Public Works and testified in detail as to the value and vital importance of these projects, and the need for increased funds.

In spite of the longstanding support of the Corps of Engineers and the overwhelming evidence in support of the request for increased appropriations, the committee did not see fit to grant the increases so earnestly sought. I am sure the committee's decision was strongly influenced by the impending threat of another "no progress is allowed" veto. This opinion is borne out by the fact that the bill, as passed, contains no increases over Presidential recommendations for construction work.

Last year this Congress overrode the President's veto of the 1960 public works appropriation bill. My State received almost nothing from that bill, but I voted to override because I was convinced that the country's best interest would be served by a passage of the bill.

I intend to ask Maryland's Senators to urge their Senate colleagues to increase the appropriation for the port of Balti-

more. If they are successful, I believe my colleagues in the House will recognize our need and approve the increased appropriation.

Speech by Mrs. Philip Graham Before the Health and Welfare Council of the Greater Washington Area

EXTENSION OF REMARKS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. BOLLING. Mr. Speaker, the following important speech was made by Mrs. Philip L. Graham before the annual conference of the Health and Welfare Council of the Greater Washington area at the Hotel Statler-Hilton on Friday, May 6, 1960:

Early this year, the Washington Post carried a column by Bill Gold in which he indulged in his customary mock projections about the course of news events during 1960.

Now Bill Gold cannot only be hopelessly optimistic but also dead wrong about when the Washington Senators are going to make the first division—but one of his forecasts for 1960 is already painfully true.

for 1960 is already painfully true.

As he reported, for every other month of the year "a survey indicates that facilities at Junior Village are hopelessly inadequate."

They are, they have been, and it appears that they will be. Even if the Congress decided to appropriate the millions of dollars already requested for new buildings at Junior Village, this center for dependent and neglected children will be not only filled but will continue to be overcrowded before the last brick is laid.

We are spending and will have to spend more money for buildings down at Junior Village when we should be spending to keep children from ever going there.

We have no present alternative to asking Congress to build more buildings at Junior Village because so far, as a community, we have found no way to reverse the depressing trend of mounting admissions. And, frankly, I wonder if we ever will.

There is an impressive and ominous absence of citizen interest in such problems as Junior Village.

Many of you here today have become practically kissing cousins because you haven't been willing to forget the problem. You see each other coming and going from every meeting in town and your devoted efforts haven't been enough to reduce—even by one—the number of children going to Junior Village, or to make even a small dent in the tragic situation they symbolize. So I think we might as well all give up.

We can join the vast majority who don't seem to care if the Capital of this Nation is run down and neglected and poverty stricken—and voteless.

Or we can decide that the vast majority would care, if they really knew the plight of the District.

We can decide that we must create vast new legions of kissing cousins who will come and go from every meeting in town and will be sufficiently vocal to convince the District Commissioners and Members of Congress that the District should not become a pest hole, for heaven's sake, and time for action was yesterday. It was many yesterdays ago—3 years of them, in fact, when the late Miss Patricia Morss of the Department of Public Welfare asked some of us

in the Health and Welfare Council to look into the alarming number of children in Junior Village and the even more alarming

numbers pouring in.

She hoped we could find out why there was a 900 percent increase in the population at Junior Village in little more than a decade. She hoped we could find out why these children weren't going out of this tem-Porary shelter care as fast as they were coming in, and what kind of care they were getting while they were there. Now a 900 percent increase in children in this form of shelter care in a decade seems alarming enough

But what the Junior Village committee found in its long study of the problem of dependency in Washington simply dwarfs that figure and staggers one's imagination. Junior Village is now regularly housing more than 400 children-with a capacity for 240. Some 100 more children are in emergency foster homes. A similar number have been sent to Children's Center, to be housed in the same quarters with children whom our juvenile courts call delinquent. But this is only the head on the boll of poverty and dependency here in Washington. Think about it for a moment. Four hundred children at Junior Village is 1 percent of our problem of dependent and neglected children.

We have more than 10,000 families in Washington living below minimum subsistence standards. These 10,000 familles have 42,000 children. These 42,000 children are living in families too often composed of one parent. They are depressingly familiar with the trials of hunger, bad health, illiteracy, jail, and drunkenness.

These are our dependent children, judged by the definition we applied in the Junior Village report. Our definition was "that combination of social and economic factors Which render a family inadequate, and which passes this inadequacy along as a grim heritage from one generation to another." This is an appalling statistic. Dependency is an appalling problem.

What can be done about it? What can we do about it now? Let's face it: There is nothing we can do that won't require money, time, and effort and-most painful of allthought. We have already more than enough honthought in this field. There are endless meetings which have no real point and which achieve their goal perfectly. There are endless conversations about multiproblem families, hard-core families, and reaching the hard to reach. People continue to say we need the family approach and, in the next breath, let's apply to a foundation.

There is a project on dependency of some kind nearly everywhere you look. Money has been spent in great quantities on research, on pilot projects, and on efforts some of which are good, and some fruitless.

It seems to me we have reached the time when we need, in many social science fields, to distinguish between elaborating the obvious through more talk and facing the simple, obvious, and monstrous problems which no amount of just talk will solve. For example, in the District, dependency has two aspects. One is economic. It is perfectly obvious that as long as families break up because of poverty alone, we won't have a real program to prevent dependency here.

But that is what is happening. District restrictions on aid to dependent children do keep some families off public assistance. It probably keeps welfare expenses down-in this category. Of course, it turns public assistance investigation units into spies, who are supposed to find out whether an ADC mother has a beau on the premises so that he could be designated an acting father or stepfather. And the net effect is that the District too often is taking money out of its other pocket to keep children either in

Junior Village or in foster homes, deprived of their natural ties with their own mother.

We don't give financial aid to a family where the father is unemployed if he is em-ployable: We seem to have the philosophy that it is cheaper to break up a perfectly good home where the father, even when he is employed, may not be able to earn quite enough to feed, house, and clothe his children, and hurl those children into the maelstrom of Junior Village.

In addition, we are struggling, as most other places are, with the 1-year residence law requirement. I am sure you were moved as I was by Governor Rockefeller's position on the so-called merits of residence restrictions.

Now, \$111/2 million is a lot of money, and that was what we paid in the District for public assistance last year. But it doesn't measure up to expenditures for public assistance elsewhere.

Measured in terms of personal income, the District was spending 16 cents per \$100 of personal income, compared to 45 cents for the United States.

And the resulting lack of even adequatemuch less generous public assistance to children here continues to compound the dependency problem.

We have another problem common to all big cities-suburban growth. In the last 40 years, the District population has doubled, and the suburban population has increased eight times. Now we have only 43 percent of the metropolitan area population. have 86 percent of the area's nonwhite popu-One-half of our people and twothirds of our children are now Negroes.

This population shift is, I think, fairly typical in large cities. It means that a large percentage of our people are faced not only with problems of poverty, but such problems compounded by blas in employment and housing, and a lower level of education. In the District, there is another side to it. now lack, and probably always will, the kind of industry which can employ large numbers of unskilled laborers.

And what can we do about all this?

We must face each problem with a budget hopelessly imbalanced by inadequate Federal payment, set at the whim of each succeeding Congress.

We cannot raise taxes from people who earn their money here but live in the sub-urbs. We must beg for our health, school, and welfare budgets before District committees, composed of members who represent areas often far removed from the District of Columbia.

It is very hard to explain to an uninterested Congress that we must spend money in welfare to save money. It is hard to con-vince our own Commissioners, beset as they are by requests from every department.

It would be easy to be completely discouraged in the light of these hard realities. There seems to be no money to meet our dependency problem. But I suspect that the money to do at least what other areas already have done probably is there.

In Minnesota, for example, the goal is that no dependent child shall be in an institution, either public or private. And I've been told they have reached that goal. Judge Waxter can tell us more about the Baltimore situation, very close to home, and more parallel to our own, but I understand it has only one public institution for dependent children, which houses only 48 children.

In many places in this country, institutions are being streamlined to serve the special needs of children who can benefit from group care-those who are emotionally disturbed, some older children, retarded children. We can hope that Junior Village some day may serve such purposes as these.

But what can we do about that part of dependency which is not due to economic factors? What about the families which

would fall apart no matter how much money was spent to keep them together? This is an immense and exciting field. There is much to be learned. Our concepts of what is best for such families are changing very rapidly. Many professionals are hard at work on possible answers, but they are baffied. And believe me, if they are baffled, a lay person in this field can be as bewildered as Alice in Wonderland. We need to keep asking questions until we do get answers. One basic question is, Where do our welfare services fail?

They aren't reaching the number of families who need them and ask for them. And there are untold numbers of families who have fallen below the level of even being able to ask for help, much less of finding it and going after it. These are people who don't have the carfare, or perhaps, the clothes, or even the energy to take a bus or streetcar to a family agency or the Depart-ment of Public Welfare. For some of them, it is an extreme effort to get a basket, a number, and find the right line for surplus food.

These are our multiproblem, hard-core, hard-to-reach families. You are undoubtedly familiar with the study by Community Re-search Associates in St. Paul about 10 years ago which showed that 6 percent of the families took over half of the health and welfare dollar. St. Paul is still experimenting with ways to help these families.

Several agencies, both public and private. are contributing caseworkers to a unit which is using a family approach, with so-called aggressive or assertive casework, with these families in St. Paul.

The philosophy is that one worker makes an approach to a family, rather than many workers from different agencies. The family worker doesn't wait until the family breaks up but tries to help the family that looks headed for trouble.

In Cleveland, the Welfare Federation is planning to pour existing welfare resources of the city into an area of urban decay, and adding a whole new specialized family service center to deal with the hard-core families in this tract where 85,000 people live. They are planning research to design special programs and evaluate the project as it moves ahead.

California has issued a report which shows that raising the amount and caliber of casework service in public assistance in the end reduced the caseloads in one county-Marin. Minnesota is thinking of switching its public welfare methods to the family approach, even though the amount of reorganization this would entail staggers the imagination.

All these and many more are portents of an exciting new trend. In the District, there has been some progress since we finished our Junior Village report last summer. has been a small increase in public foster home boarding rates, and also in boarding rates for children the Department of Public Welfare places in public institutions.

The Department has funds for an increase in staff and there have been some administrative changes within the Child Welfare Division and at Junior Village.

The Health and Welfare Council has completed the comprehensive metropolitan area study of children away from homes that other members of this panel will discuss. The neighborhood houses have been studying their programs with a view to greater revised services. The Department of Public Welfare has conducted a successful venture with the National Capital Housing Authority in using caseworkers in housing projects.

The three family service agencies, the neighborhood houses and the Department of Public Welfare, as well as some of us who worked on the Junior Village report, are in the process of working out a plan for taking service to the neighborhoods.

As it stands, our project is both incomplete and unfinanced, but our present idea is to put social workers under the roof—if they will have them—of some neighborhood houses, the general theory being that it may be the agencies, not the families, who are hard to reach. These caseworkers would be both workers and community planners and out of their experiences and advice we hope will come a broader effort. It is a practical way of finding unmet needs, we feel. And since public and private agencies and the neighborhood houses are working together on the project, all are ready to profit from whatever changes in service might be indicated as a result of this experiment. It might be changes in the Department, in the family agencies, or in the neighborhood houses themselves or in all three.

At any rate, it is a start. And it is a start which, while it has research and experimental aspects, will also be serving some families and some groups as it progresses.

In the final analysis, I would say that dependency is composed of two failures by the community.

The first failure you can call what you will-moral, ethical, religious. It is a failure of feeling, not a failure of thought or technique. The simple fact is that even as we approach the end of the second millenium of the Christian era, we are not yet become civilized enough to want to help the unfortunate.

The second failure, as I have already tried to say, is a failure of thought and technique. We really know nothing about this failure by itself. That is to say, we only know that we have very complex social science problems in trying to alleviate dependency in a community with no strong desire to help the unfortunate. We read in the literature, and we say in those inbred meetings of ours, that the problems would still be complex if we had all the money and all the resources imaginable. We say this but we do not know this and we cannot know, since such circumstances have never existed.

The more I think about our thinking, the more I wonder. And the more I wonder, the more I suspect that one single, simple resolve of the community would eliminate most of the complexity and elaborateness of welfare activities. These are said to be times of great crisis in which we stand for the value of the individual as against the Communist creed. And yet in our own towns and villages and cities we fall to stand for the value. of the individual.

These are times in which we are hearing much about a so-called religious issue in our presidential campaign. How ironic to call religious an issue that divides the brotherhood of man. I suspect that we may all have become so secular, so wrapped in technology that we shy away from using words that are not technical.

But just for a closing moment I shall suggest that we demean ourselves, cheapen our decency, and lessen our spirit when we say that dependency arises from "budget prob-lems" or "lack of research" or "limited com-munity facilities." It is better to be blunt. In a society as rich as ours dependency arises from selfishness, from stupidity, and from a refusal to believe in the brotherhood of man.

Jobs After 40

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

Mr. HOSMER. Mr. Speaker, the Fraternal Order of Eagles has for some

time carried on an effective, nationwide campaign to eliminate job discrimination against workers over 40. The Eagle magazine published an excellent article by Judge Robert Hansen detailing what the campaign is and why it is being carried on. The article is as follows:

[From Eagle magazine, February 1958] WILL YOU BE THROUGH AT 40? (By Judge Robert Hansen)

Dee Floyd had gotten "riffed."
"Riffed" is navy yard slang for being laid
off due to a "reduction in force." The late 1957 cutback at the U.S. Navy Yard in Bremerton, Wash., had cut Dee Floyd and a thousand others adrift.

So Dee Floyd went looking for a job. He was a machinist by trade, a member of the Machinists Union for many years. He was skilled, trained and experienced. He was in the best of health-but he was 38 years of

After a November meeting of Bremerton Aerie, Dee Floyd told his fellow Eagles what happened to him on his job-hunting expedi-

"Today I went to six employers in and around Seattle looking for a job as a ma-chinist," Floyd said. "They wouldn't even take my application. All six told me that I was too old—that they weren't hiring ma-chinists who were at or near the age of 40." The Eagle machinist had encountered first

hand a hard fact of American economic lifejob discrimination based on age. To many employers, an over-40 worker is considered obsolete. He was manufactured too long ago. He's out of date. In fact, in many lines of work, persons who are 30 or 35 years of age are considered "too old" to be em-

The case of Dee Floyd illustrates the problem of hundreds of thousands of Americans barred from jobs because of their age. Here was a skilled craftsman, with years of valuable experience, being told that he was too old to work at his chosen trade. Here was the head of a family, with three children (the oldest getting ready to go to college), being told that he was too old to provide for their support. Here was a man in the prime of life, able and willing to work, being told that he was too old to be hired for work which he could easily do.

"Don't worry about me. I'll take care of myself," Dee Floyd told the writer. He probably will, being that sort of a fellow.

Early last summer, a shoe factory closed its doors in Portsmouth, Ohio. The picturesque river community made the Nation's head-lines, back in 1937, when its floodwall lost a bitter battle with the surging waters of the Ohio River. But there were no headlines when the Selby Shoe Co., one of the oldest manufacturing establishments in the locality, went out of business. That was news mainly to 1,700 men and women who lost their jobs in the closing.

Today, months later, many hundreds of these shoe workers are still out of work. Most of them have exhausted their unemployment benefits and are still out of work. Most of them find no jobs open to them because they are over 40 years of age.

Emerson T. Pence, secretary of the local CIO council and an active Eagle member, reports "a very serious unemployment prob-lem." That is why, joining many other community labor groups, the Portsmouth CIO Council has endorsed the Eagles jobsafter-40 campaign and is circulating Eagle petitions for congressional action to end job discrimination based on age.

The problem of hiring restrictions aimed at barring older workers is nothing new. When the textile plants and shoe factories of New England were relocated, thousands of older workers, many of them Eagle members, were left stranded. When the diesel engine supplanted the steam locomotive, thousands

of railroad employees and coal miners, many of them Eagle members, found starting over an assignment made more difficult by age limits on job applicants. In this era of mergers and plant shifts and automatic machinery, hundreds of thousands of displaced older workers are up against the no-helpwanted barrier to over-40 job seekers.

Help wanted ads in the daily newspapers tell the story:

"Company representative: Prefer men under 35."

"Machinist: \$125 per week. Age to 40."
"Radio parts salesmen: 21 to 40. High school graduate."

"Automotive executive: Must be top-notch. Age to 35."

Advertisements like these appear every day in newspapers across the country. It is puzzling that, until recently, so few were outraged by the social tragedy and economic waste involved in the undisguised discrimination against the older worker. Perhaps, we are so accustomed to reading the used car sales ads that we agree that a worker produced in 1918 or 1922 is as out of date as a 1928 or 1932 automobile. This theory of human obsolesence is unsound as well as unfair.

Every study and survey has revealed that older workers do as well or better than their younger associates. "Myths," columnist Roscoe Drummond termed the reasons often given for not hiring over-40 workers. And myths they are. Government surveys and university research has clearly established that older workers have less accidents, are less prone to accidents, are more stable and dependable, equal or surpass younger workers in productivity and overall performance.

Even the widespread notion that increased pension costs follow hiring older workers is without basis. A dominionwide survey made by the Canadian Government finds such in-creases "insignificant in proporation both to the total wage of the worker and to the total cost of providing pensions." A wellknow pension planning counselor, quoted in American Business magazine's recent survey, states: "Within the last 2 years we have participated in a study by the U.S. Department of Labor on the influence of pension costs on the hiring of older persons. We feel that these costs are more imaginary than real."

Most private pension plans are based on a ercentage of average earnings multiplied by the number of years of service. Almost, with-out exception, they are supplementary to social security. The older entrant into com-pany service gets a smaller pension when he retires, but, to quote Albert Q. Maisel in American Weekly article on the subject. "Getting a smaller pension is far better than being barred from employment and getting no income at all."

The recent report of the Canadian Government, prepared by members of the Departments of Finance, Insurance, National Health, and Welfare, and Labor, summarizes the case for the older worker. "There is an increasingly wide measure of agreement today that for most types of jobs the performance of workers in their middle years compares more than favorably with the performance of younger persons and that older workers are often steadier and more reliable on the

These findings do not pit older workers against younger workers, except in the sense that the ability to perform the duties of the job should be the determining factor as to who gets the job. The Eagles jobs-after-40 campaign seeks, not preference for older workers, but asks for older persons an equal opportunity for employment in competition with other workers of similar qualifications. Removing upper-age limits in hiring would insure that job applicants, young or old, were considered for hiring as individuals, and not as members of a group.

How is this to be done? The Fraternal Order of Eagles proposes a fourfold program to eliminate the arbitrary barriers against hiring over-40 workers. Here is that program:

1. Federal and State legislation outlawing discrimination based on age.

2. State and community committees to enlarge job opportunities for older workers.

3. Insistence that public agencies abandon upper age limits in civil service entrance examinations.

4. An educational campaign to convince managements, labor and the general public that age barriers in employment are unsound and unfair.

The immediate objective in this long-range campaign is the passage of legislation at the 2d session of the 85th Congress to prohibit unjust discrimination in employment because of age. Several measures, including the proposed National Act Against Age Discrimination in Employment, introduced by Senator Jacob K. Javirs, of New York, will be before the Congress. In effect, they will seek to make it unlawful to refuse to hire, discharge or otherwise discriminate against any one because of his age. Probably, Federal action will be limited to field involving Interstate commerce or employers having defense contracts with the U.S. Government, as this is likely the limit of congressional authority in the field.

Currently, the Fraternal Order of Eagles is aiming at 500,000 signatures on petitions urging congressional action on behalf of the

lobs-after-40 program.

In addition to the support from international union presidents, State and local labor bodies, the Eagles jobs-after-40 campaign has been given the endorsement of many prominent public officials. U.S. Senators, Governors of many States, Members of Congress, mayors and local officials have commended the FOE for the jobs-after-40 effort. Editorial support from daily newspapers and national magazines has been evidence of widespread concern for the plight of the older worker in our economy.

A recent report of the U.S. Employment Service reveals that generally more than half of all job openings specify upper age restrictions. The same report comments:
"Most older jobseekers are out of work through no fault of their own, e.g., the firm may have changed locality, and consolidation and change of management may have

eliminated their jobs."

There is every reason to believe that the problem of reemploying the over-40 workers is getting worse, not better. Back in 1951, an analysis of "Help wanted: male" advertisements in the newspapers of an eastern metropolitan area revealed that 38.2 percent of the ads carried age restrictions.

Last year, the U.S. Department of Labor checked the same newspapers in the same area. The proportion of want ads limiting Job openings on the basis of age had soared to nearly 60 percent.

Large industries seem more prone to insist that the men and women they hire be under 40. The larger corporation is more likely to hire on an entirely impersonal basis, and to lay down fixed and arbitrary hiring

procedures for local plant managers. The Vice President of the United States RICHARD NIXON, commenting on the Eagles Jobs-after-40 campaign said, "The Fraternal Ordan Translation of the Company of the Co Order of Eagles deserves the gratitude of every American for its jobs-after-40 cam-Palgn."

The Eagles jobs-after-40 campaign is not Just a matter of exposing the misconceptions upon which present prejudices against hiring older workers are based. It is not just a matter of preventing the economic waste involved when needed skills are lightly discarded. It is not just a matter of preventing hardship, the social tragedy involved in arbitrary age barriers.

The Eagles jobs-after-40 campaign is a resolute affirmation of the right of every person, regardless of his or her age, to equal opportunity in employment. Losing a job is a serious matter, but being denied a job because of one's age strips one of self-confidence and self-respect. When an employer says to job applicants, "Sorry, you are too old," he does more than deny them a job. He strips them of their sense of worth and leaves them with a feeling of failure.

The Fraternal Order of Eagles believes that this is not just Dee Floyd's problem-not just a community problem for Portsmouth, Ohio. It is a national problem that calls for national action. That is why the Eagles have launched this all-out campaign for national, State, and local action to end job discrimination against older workers.

Once before, on behalf of senior citizens and their right to live with dignity and selfrespect, the Eagles led a fight for pensions and social security.

Today and tomorrow, on behalf of middleaged workers and their right to live with dignity and self-respect, the eagles lead the fight to end job discrimination based on age.

School Construction Assistance Act of 1960

SPEECH OF

HON. GRAHAM A. BARDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10128) to authorize Federal financial assistance to the States to be used for constructing school

Mr. BARDEN. Mr. Chairman, I have tried to listen to every word of this debate. I am bound to report that some of the conclusions and statements I am unable to agree with, and some I am unable to substantiate with statistics, but I know how confusing statistics are and how easy it is to mix them up; so I pass

I am opposed to this bill. I have no hesitancy in making my reasons absolutely clear. I should know just a little bit about the field of education. I know something about going to the one-room schoolhouse. There is one thing about it, the quality of education was tops, and when I moved to the city, according to my age I was in about as good shape as those who had been in the marble building. I entered the seventh grade and was one of the youngest to do so. I think that was of great importance, for I felt that I was not entirely out of place.

There are some things about this bill that we just must consider whether we want to or not. During the depression in 1933 I had a rough experience. I was chairman of the legislative education committee in my State, and I had my troubles there, but we kept our school doors open; we paid our schoolteachers; we improved the grade of education, even though we had to impose a sales tax during the depression to take up the IOU's we had given to the schoolteachers. We did it. We still have a fine school system and we are still keeping it up.

I am not given to taking much time answering somebody else's speech, but my friend, the gentleman from Indiana [Mr. Madden], has done right much back talking with me about the subject we are now discussing. On yesterday he recited a very sad plight of affairs existing in Indiana and he told us how many thousands and thousands who had no schoolrooms were contributing to juvenile delinquency, and what a horrible, horrible state of affairs they were in. Of course he, as usual, had to throw a few uncomplimentary references and inferences to the poor South.

I began to think about the poor unfortunate children of Indiana and interestingly enough, I found the poor little State of North Carolina has approximately the same population. The population of Indiana is 4,581,000, North Carolina, 4,549,000. That is pretty close.

Then I went further and I gained this information with reference to the responsibilities of the two States in the way of outstanding bonds, not including these toll road bonds that are paying for themselves: I found that there were actually \$500,000 outstanding in the case of Indiana. I found North Carolina has full faith and credit bonds outstanding to the extent of \$258,985,000. I further found that the great State of Indiana has neither individual nor corporate income taxes. North Carolina has both. I also found the public school indebtedness for the State of Indiana was nil. I found the public school indebtedness of the State of North Carolina to be \$55 -095,000, and that just winds up a \$50 million bond issue which we passed and will pass another one if it takes that to educate our children. And keep them from going through the horrible experiences that Mr. Madden said the children of Indiana were experiencing. Although the total personal income, 1958, for Indiana, \$9,118 million; North Carolina, \$6.297 million: which means that Indiana tops North Carolina approximately \$3 billion

I found the personal income average for the State of Indiana was \$1,990, for the State of North Carolina \$1,384. The population I just gave you.

Total assessment of property subject to general and local taxation, Indiana \$7,453 million, North Carolina considerably less, \$6,696 million.

But I did not stop there. I heard so much about Gary, Ind., I have been through Gary though I did not see much of it on account of the steel mills, smoke stacks, oil wells, and so forth, that I just wanted to follow it right on down.

I found that in the case of Lake County, in which Gary is located, property subject to a general property tax was valued \$755,890,000, and poor little Craven County, my home county, \$40 .-283.000.

Now, I am not going to dwell on that further, but I say to you when you begin to cry over something. I think you better find out what you are crying about and who is to blame. Now, it may be that these thousands of children without school facilities are contributing to juvenile delinquency, and I would not dare say anything ugly either way, but I am not so sure that there are not one or two or more adult delinquents who are not interested enough in their children to pay enough to give their children the kind of education they either deserve or have a right to expect.

Mr. Chairman, why do they not love their children like we do? Is it only poor people that love their children? I do not think so. I do not think so. Now under this bill we reach into the Treasury and start something that, in my opinion, once we do, we will rue the day. We, under this bill propose to take \$325 million the first year, and what do we do with it? We sit down with a pencil and divide it up. Is there any criteria of need? No. And, that would be a brutal operation. Once that program is adopted here, then why do not all the committees get together and divide up what money there is in the Treasury; divide it up and let us adjourn and go home. It would make just as much sense. And why was this plan adopted? All I know is what the proponents said in committee and that was, "That if every State was not given money they would not get the votes to pass the bill."

Now, I want to say this, and I should have said it, I guess, in the beginning. All of you know that I am on the way off the stage, but I am not on the way out when it comes to being interested in my Government and the kind of Government I will pass on to my children and to my fine grandchildren. Let us pass them something besides debt and more of it, that I doubt they will ever be able to take off of their books. Too many people spend too much time talking about their ancestors and not enough time thinking about the kind of ancestors they are going to make.

Now, I want them to have just as good schools as anybody, and if it is within my power, I am going to see to it that they have them.

Now we come to a little bit more on this money business, and somebody in this House ought to think about it. Out of that money, where do you think part of it goes? Oh, a sum, between \$1 million and \$2 million, goes to the District of Columbia. Now, how many pockets is the District of Columbia supposed to get money out of? Just last year the Congress appropriated for operating expenses in the District of Columbia \$45,232,700 and for construction \$3,571,000, which made roughly \$50 million. Now they have a supplemental program in for about \$3 million more. Now, let us let the District of Columbia keep on getting this money from the Committee on Appropriations after they have studied it and see what they think their needs are and so forth and not go putting them in this grab-bag bill for a part of this \$325 million a year.

Now, I want to mention something else. I know there is control in this bill. And, I know there is not a person in this House but what has made speeches that they are for Federal aid without any Federal control or interference on the part of the Federal Government. Well, let us refer to the proposed bill itself.

The first thing, the Commissioner gets hold of the money. Then the States make their applications for it. From there on the Commissioner writes the rules; what kind of reports they write and what kind of reports they should make to him, and then the States must make a report to him as to their manner of handling it, and he writes out the rules and regulations with reference to the kind of reports that they should send in for information.

Now, this is odd and strange in that the States must certify that they will have procedures—I want to be accurate on this—they have got to certify to the Commissioner that certain procedures have been established.

Procedures have been established under which such payments will be so distributed that priority is given to local educational agencies which have the greatest need for school facilities and which in terms of the economic resources available to them are least able to finance the school facilities.

Why did the not put that in the bill somewhere, except for telling the States what they have got to do with reference to distributing this and that it must go to the needlest ones?

Then the say in here that if some school district thinks that it has not been treated right, they will be afforded a hearing. That is all the description you have of it. I do not know who is going to have the hearing or review it. I do not know whether they can appeal or not. I do not know anything except that it is a little window dressing which is too far along in the bill it should be in the beginning when they are dishing out the taxpayers' money.

The CHAIRMAN. The time of the gentleman from North Carolina [Mr. Barden] has expired.

Mr. KEARNS. Mr. Chairman, I yield the gentleman 10 minutes.

Mr. BARDEN. I do not believe the taxpayers of my district, or the rest of the country, expect me to come up here and handle their tax money in any such careless manner. Think of the piles of money that you will be pouring into these areas because they say they need more money, when they have not done their duty by their own children. If we keep this up, every bit of it will show up again in the coming tax bill, and every time you funnel more and more of the school setup into Washington, mark my word, you will have less and less efficient schools. That is something nobody seems to think about.

We have had the idea here in recent years that if something terrible has happened, the thing to do is to appropriate millions of dollars and everything will be all right. But we have learned better than that. If we know anything we know that it is not how much money you spend, but the final answer, concerning how much good or bad you have done, is how you spent that money.

There is another item of Federal control. There will not be one dollar of this money spent for construction without the Secretary of Labor fixing the wage rate of the man who works and draws the money. The Secretary of Labor also fixes his classification. And yet they say

there is no Federal interference or control. You show me the man in any outfit who controls the spending of the money and I will show you a very import man. So that is it.

There are other ways of providing fair wages. We know them. You could take your unemployment setup, where they register, and there would not be any trouble finding out the prevailing wage. There is not one Member of this House who does not know that any State Government construction or Federal Government construction is more expensive and higher wages are paid than in private construction. We all know that. We also know that when wages are fixed by the Secretary of Labor, the building costs from 15 to 27 percent more to build. We all know that. I have tried every way in the world I could to work that out. I have hoped for 25 years that we could do something in this field and not pull the Federal Government into it. I think the Federal Government's nose is already too far into our educational system, and it has done already almost if not irreparable damage. Put its nose in further and you will aggravate and multiply the ills and troubles we already have.

You say, "How can we get the Federal Government out of it?" What is the answer? It is easy. If this House wants to pass a bill and take the Federal Government completely out of it it can do it. It is as easy as that. I did it. I offered a bill to the committee. Honestly, I believed it was going to be completely unanimously accepted, until one man said, "Well, where is the Davis-Bacon Act?" The man who made the motion to approve it was listening, and he said, "Well, it isn't in there." My answer was, "Certainly it is not in, it is out"; and the proposal was defeated 24 to 4

The following was my proposal:

PAYMENTS OF STATE ALLOTMENTS

SEC. 104. The Commissioner shall pay the State allotment for any fiscal year, or so much thereof as the State educational agency requests, to the State educational agency upon certification by it that the amount to be paid does not exceed one-half of the cost of constructing the school facilities for which such funds are to be expended. Funds paid to a State educational agency under this section shall be expended solely for construction of school facilities in the State, and shall be used to pay not more than one-half of the total cost of constructing all school facilities in the State which are assisted under this title.

JUDICIAL REMEDY

Sec. 105. (a) The district court of the United States for any district in which the capital of a State is located shall have jurisdiction, as provided in this section, to grant appropriate relief in any case where any funds paid to the State under this title have been or are about to be expended in violation of this Act.

(b) An action under this section shall be brought in the name of the United States by the U.S. attorney for the district involved, and shall be brought against the State. The Federal Rules of Civil Procedure shall apply.

(c) The court may grant such temporary relief or restraining order as it deems appropriate pending final disposition of any action under this section. If in any such action it is determined that any funds paid

to the State under this title have been or are about to be expended in violation of section 104, the court shall grant a permanent injunction or other appropriate relief.

I do not think the Davis-Bacon Act is that important.

Then in an attempt to arrive at an honest prevailing wage rate I proposed the following:

SEC. 106. (a) The Commissioner shall not make any payments under this title to assist in financing the construction of any school facilities project, except upon ade-quate assurance that all laborers and mechanics employed by contractors or subcontractors in the performance of work on such project will be paid wages at rates not less than those prevailing for similar work in the immediate vicinity; for the purposes of this section the prevailing rates shall be those which are certified by the State employment office as being those contained in the most recent applications for employment at similar work in such vicinity on file with the nearest office of the State employment service as of the time the project is first advertised for bids or negotiated as the case may

(b) The Commissioner shall reimburse, through the Department of Labor, each State employment service for such tional administrative costs as may be in-Volved in furnishing the necessary wage data to contracting officers, contractors, and subcontractors.

This subject of education would be enough for the best equipped committee in this House, without the Labor Committee, too. I say to you in all frankness and with as much honesty as I ever spoke in my life, for the good of this country I hope this Congress will someday make two committees out of this Education and Labor Committee. I presided over the Education Committee long before I did the joint committee. We passed some wonderful legislation that is still on the books. The Davis-Bacon Act, under the Secretary of Labor, just costs about 25 to 30 percent more to build a school building; that is all it costs, because you do not think a contractor is going to be numskull enough not to add a few hundred thousand dollars on when he does not know what wages are going to be fixed by the Secretary of Labor and who is going to handle the classification of his workers and, of course, with the Secretary of Labor, regardless of the party they may be affiliated with, is controlled by the labor union heads. At least, this has been true for 25 years to my own personal knowledge.

We talk about spending money. This will not break us. As far as that is concerned, as I have said before, you can misspend, you can overspend, you can overappropriate, and we can recover. But when you begin to put forces in operation affecting our basic institutions, the educational system of this country, no, you will not get them back, and you will not do any good. I know the history of what the expenditure of money mis-

spent means.

We sometimes hear the statement, "Oh, well, the Federal Government does not spend enough in the field of educa-There is a report showing the ex-Denditures of the Federal Government in the field of education, a summary of which was prepared by one of the finest

research men I have ever known. He is with the Congressional Library. Mr. Charles Quattlebaum has just furnished me, under the definition of "educational" which Mr. Webster provides, that every one of these departments-even though the soldiers' educational program, the GI program, is just about out: so it constitutes a very, very small amount of the expenditures-even with that the Federal governmental departments are now handling and spending \$3.618 million.

I hope I shall be able to organize the committee before I leave to put some order into chaos. These departments are sending people to be educated at Government expense, and it ought to be stopped; that is all. I want them to have what they need. That is why this investigation has been made at my request by Mr. Quattlebaum for this year. Let us be honest with education and with educators.

Mr. Chairman, the bill can be drawn so there will not be any Federal control, if, first, we want to, second, leave selfish minority groups out, and, third, put education first when we are writing an education bill. You can write an authorization bill, state what the money is for and what it shall be spent for. Turn that money over to the men who have built this fine educational system of ours over a period of over 100 years, and they are the State officials and the folks who have built the buildings and run the schools. They know more about these problems than the folks who have never had any experience along that line. Turn the money over to them. Confer jurisdiction on the Federal district court in the capital of every State. Give them the jurisdiction to see to it that the money is spent for the purposes for which it was appropriated just as other dollars of the taxpayers are spent for the Federal Government-just as honestly and strictly for the purpose for which it is intended. Keep the Commissioner of Education and the HEW and all the rest of the bureaucrats out of it. Let that money be protected just like any other Federal dollar will be protected.

Some people get very much disturbed on the question of integration. Nobody has ever heard me make a speech on that, and I do not like to discuss it, for those who talk most about it know least about the actual problem. I had a school building built right near my home out of these Public Laws 874 and 815, the impacted school area laws, and they named that school for me. It is the only school in eastern North Carolina that is integrated, so I suppose that makes me a liberal. I do not know that it did, but I just thought I would mention it. I heard enough about it for a while, so I, too, talk about it a little bit just for fun.

Mr. THOMPSON of New Jersey. Was there any truth in the rumor-

Mr. BARDEN. Just a moment, I want to know if you are friendly first.

Mr. THOMPSON of New Jersey. I am friendly. I just wanted to know if there was any truth to the rumor that when that was announced, you got a hammer and a chisel and headed down there to take your name off.

Mr. BARDEN. No. There is nothing to that. I am in favor of school buildings.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. KEARNS. Mr. Chairman, I yield 5 minutes to the gentleman.

Mr. BARDEN. I wish to thank my friend from Pennsylvania, the ranking minority member of my committee, so much

Mr. BECKER. Mr. Chairman, will the gentlemen yield?

Mr. BARDEN. I yield to the gentleman from New York.

Mr. BECKER. For years I have listened to the debate on previous bills, and I have listened to the debate on this bill over the past few days about the need for education; and the need for education has been used as a weapon for this type of legislation. Yet, Mr. Chairman. is there one word in this bill that deals with the quality of education or the standards of education, as was so well pointed out by the president of the University of Maryland only last week referring to the low standards today? Is there anything in this bill along that

Mr. BARDEN. No; there is not anything along that line in this bill. And maybe there is no place for that in a construction bill, but we are going a little bit haywire on this subject of thinking that just because we spend a million dollars, we have improved everything. You are 1,000 percent right when you call to our attention, that the quality of education is simply being forgotten.

Mr. BECKER. That is what I wanted to point out.

Mr. BARDEN. I think this NEA outfit has just totally gotten their minds off the track. Where they used to be working, and working to improve education, now they are just about as powerful a lobbying outfit as I know of and their love for the schools has seemed to change to dollar marks in their eyes. I think there is room for them to do better than they are doing and contribute more to education.

Mr. BECKER. If the gentleman will yield for one more question, I have school districts in my congressional district that have the rates today and they have not got the money to build more schools where they have 10, 12, 13 and 14 schools, where the rates today are up to \$38 per \$100 on the assessed valuation for schools. There is nothing in this bill to reimburse them or help them pay on the bonds that they issued for their schools: is there?

Mr. BARDEN. No, absolutely not, unless the debt is incurred, after this bill becomes a law. Then they can get some payment on the interest on money that is provided after this bill is enacted. And you are rendering a real service to your people to let them know the real truth early.

Mr. BECKER. But they will have to pay these appropriations, will they not. just the same?

Mr. BARDEN. Of course. And, for instance, you might give some thought to this: We pass a bond issue of \$50 million. In addition to that, my county passed one for \$2 million. In addition to that, we are assessed 34 cents last year for schools. Now we are pretty well spent out. We will never catch up, but we are pretty well up. There will not be much spending for a while.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

A4576

Mr. BARDEN. I yield to the gentleman from Illinois.

Mr. ARENDS. Like the gentleman from North Carolina, I am opposed to this legislation. Basically, if the people throughout the country would do as the people have done in my State, there would not be such a proposal as this before us.

I hold in my hand a tax receipt paid in the month of May. This is on 160 ncres of land and is a tax receipt for \$900. This amounts to about \$5.62 an acre, which is about 70 cents for every dollar cpent for school purposes. We are not complaining about these taxes. We are glad to pay them. To us the education of our youth is of primary importance. I wish to emphasize that if people in the respective States made the same effort that is being made in my State, we would not have this problem before us as a national question.

Mr. BARDEN. Let me say this. In behalf of the people in the various States-and I think this deserves to be said when so much has been said about what they are not doing. In the outset

of this bill it says:

The Congress finds that despite sustained and vigorous efforts by the States and local communities which have increased current school construction to unprecedented levels.

Well, they have. I have some figures between 1950 and 1960. They are building 67,000 classrooms per year. According to that and I do not know which one of these figures you want to take. One says 132,000 a year. If that is true, we are just about catching up. If it is 300,000, we can catch up in about 5 years. So the people back home are doing much more than talking, and I believe they will do better if we let them alone. America is still the greatest Nation on earth, with the finest educational system on earth. We must not sell America or its people short.

Address by the Honorable Leonard J. Saccio, Deputy Director of the International Cooperation Administration, Before the Michigan Conference on International Development

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the following address by the

Honorable Leonard J. Saccio, Deputy Director of the International Cooperation Administration, before the Michigan Conference on International Development, on May 15. This speech was forwarded to me by the International Cooperation Administration with the request that I consider its inclusion in the Con-GRESSIONAL RECORD in order that it might be brought to the attention of all Members of this body.

Address by the Honorable Leonard J. Saccio, Deputy Director, International Cooperation Administration, Before the MICHIGAN CONFERENCE ON INTERNATIONAL DEVELOPMENT, ON MAY 15, 1950

Mr. Chairman, ladies and gentlemen, the subject "American Foreign Economic Aid Today," is among the most important subjects now confronting the American people. It involves issues which are directly and vitally related to the security of our coun-They are issues which will greatly affect American life throughout the remainder of this century, and national survival will depend upon their intelligent solution.

From the standpoint of the United States, two central, related problems dominate the The first problem is international scene. The first problem is the great and growing power of a billion people whose autocratic rulers aspire to a Communist-controlled universe. This power is political, military and economic, and it manifests itself in each of these forms. istence, and its dangerous implications, are evident on every side. Hardly a day goes by without new evidence of the magnitude and character of this problem, and of its implications to our own future as a free

The other central problem is less well understood, but of equal importance with the threat of militant, expanding Communist power. This problem arises from the growing desires of a billion and one-half people who are struggling to realize great expectations-political, social and economic-which they now believe are within their reach. These expectations are part of deep social revolutions which are now sweeping the less developed countries, and in many areas the desire to satisfy expectations is closely associated with their newly won political inde-

The peoples of Asia, Africa, and Latin America are determined to improve their standards and ways of living and they will press fiercely toward this goal. not tolerate political leaders, political institutions, ideologies, or economic systems which fall to provide clear and early evidence that they can contribute concretely and swiftly to the realization of their minimum aims.

The key question-from our standpoint as well as from theirs-is whether this inexorable force will find its fulfillment in the framework of free and independent socleties or under some form of tyranny, including the Communist yoke. The answer will turn largely on whether the some 75 less-developed nations, which are now in-dependent or are on the verge of independence, can in fact satisfy the rising expectations of their citizens through free institutions, of business and of government. I am confident that most of them would prefer such a course; but I am equally confident that if, for any reason, this course should not succeed, the inexorable forces of unsatisfied desires and frustrated hopes will seek other outlets.

If the choice of many nations should be for communism, the strength of the Communist bloc would become overpowering. On the other hand, if we can help the less developed nations to achieve their goals while still retaining their independence, the ca-

pacity of the free world to counterbalance Soviet power will be immeasurably increased.

These two problems transcend all the Unforother problems which face us. tunately they do not lend themselves to easy or to quick solutions. They will be with us for more than years or decades; they will color the character of our lives for at least the balance of this century. One thing is certain: the surest course to national disaster—and I am speaking literally, and not just figuratively-is to ignore existence.

The mutual security program, in con-junction with other related activities, and our own national defense program represent the principal instruments with which the United States, in concert with other free developed nations, can deal with these two central problems. They may be imperfect, and at times poor and ineffective, instruments. But no one, to my knowledge, has ever suggested rational and workable substitutes

Aid through the mutual security program plays a specific, direct and extremely important role in strengthening military defenses. A substantial portion of all our economic aid is designed to support the military forces of friendly nations. In the judg-ment of our Joint Chiefs of Staff, these forces represent an indispensable part of our defensive shield.

You and I, as armchair strategists, may visualize the war of the future as a battle in outer space, fought with mechanically directed missiles and rockets that are powered and warheaded with nuclear explosives. However, our highest military leaders believe that the large, widely dispersed, and strategically situated forces of our allies are essential. They stress the danger of brushfire wars and they point to the opportunities for local Communist aggression which weakness in Communist-bordering countries might invite. They are convinced that these allied forces are as necessary as our own, both as a deterrent to aggression and as a major military asset in the event that the deterrent should fail.

Such forces cannot be effective forces unless there is a continuing flow of assistance from us. In the case of developed nations, this can largely be limited American-made advanced weapons. For our less developed allies, more is required. They find it impossible, even though weapons are provided through military assistance, to carry the economic burden, to pay the costs, of maintaining large forces in

Of the approximately \$4.2 billion requested by the President for mutual security purposes during the year beginning July 1, nearly \$2% billion are directly related to the creation and maintenance of forces considered essential by our military leaders. Of this amount, \$2 billion will be employed within for the purchase—almost entirely the United States-of military equipment and for military training. The bulk of the military aid will consist of advanced weap ons for our NATO allies and of all types of combat materials for other selected countries which are associated with us in regional security or mutual defense agreements.

This equipment and training will be pro vided to some 40 nations with combined forces of more than 5 million men and possessing 30,000 aircraft and 2,200 combatant vessels. Numerically, these allied forces are twice the size of our own. They are, for the most part, strategically located in areas contiguous to the Soviet bloc where it would be impracticable, and prohibitively costly, for the United States to maintain forces of comparable strength.

The remaining \$725 million is for economic aid to a dozen countries which could not, without this added economic support, maintain the 3 million men whom they now have under arms. By far the largest proportion of this sum will go to Korea, Vietnam, Turkey, Pakistan, and Taiwan—nations supporting forces that are disproportionately large in relation to their economic capabilities.

No comparable expenditure for our own Military Establishment could compensate for the security which is provided by the allied divisions, squadrons, and fleets whose effectiveness depends on the ald proposed.

The indispensability of the balance of our economic aid is unfortunately less well understood. It is too often viewed as a pure act of charity, unwarranted when we have so many worthy needs at home; as something which saps the strength of our own economy in a futile effort to strengthen the economies of ungrateful and lazy people abroad who should solve their own difficulties. Nothing could be further from the facts. The survival of this Nation, and of its economy, too, depends upon this assistance.

Most of the less-developed countries cannot, without outside help, satisfy within the foreseeable future the minimum desires of their peoples. The reasons for this condition involve two basic deficiencies which are characteristic of underdevelopment: First inadequate capital, and second, a lack of the skilled human resources and of the political, social, and economic institutions which are necessary for the establishment and the operation of a modern society. The nature and implications of these deficiencies deserve careful analysis since they are at the heart of the justification for much of our foreign economic aid.

In nations where the average per capita income ranges from \$50 to \$200 per year, the possibility of large voluntary saving is small. It is virtually impossible if a nation must currently respond to the pressing, politically insistent demands for significantly increased consumption.

There is, of course, one way in which saving can be accomplished—through the application of stringent, and often cruel, authoritarian techniques in the forced mobilization of the nation's physical and human resources. The enjoyment of increased consumption is deferred by using force, and the cost of doing so in human life and human misery is ignored, or explained away as the price of progress. Abhorrent as we may find them, Communist methods have produced the appearance of remarkably rapid growth in those countries where they have been employed.

We must recognize that the only presently practical alternative to this enforced accumulation of capital is the massive transfer of capital from external sources.

The problem of accumulating capital in less-developed countries would be difficult even if it could be assumed that populations would remain static. But we are now in the most gigantic population explosion in history, and its greatest impact is in the less developed countries. In some areas an increase in population unmatched by increases in production of food and other items is now causing a decline in already low standards of living.

In the case of human capital, the problem is somewhat different and more difficult to deal with. The developed nations do have economic resources which can be physically transferred. But helping to upgrade another society's manpower resources and to modernize its institutions is not so simply accomplished.

The American foreign economic aid program attempts to deal frontally with both the financial and the human elements of the problem of underdevelopment.

To help provide the necessary physical resources, above and beyond those which may be provided through private investment, the U.S. Government engages in several foreign economic aid activities. We are the largest single contributor to the International Bank for Reconstruction and Development, and will shortly make our initial contributions to the newly formed International Development Authority and the Inter-American Development Bank.

Through its several surplus agricultural programs, the United States enables many less developed countries to devote slim foreign exchange resources to purchase of capital equipment rather than to the purchase of essential foods.

The Export-Import Bank is an important source of capital.

Finally, because these other sources are inadequate, and in many cases also inappropriate to the needs, there is the economic aid which is provided under the mutual security program.

Within the mutual security program, the Development Loan Fund is the principal vehicle for extending capital assistance. This fund was created to help countries which cannot obtain adequate credit on bankers' terms. It lends funds to finance developmental projects. Its loans are generally long term, carry relatively low-interest rates, and may be repaid in the borrowing country's local currency—\$700 million of the President's \$4.2 billion appropriation request is to provide further necessary capitalization for this Fund in the coming year.

Our primary approach to the problem of human capital lies in the programs of technical cooperation. It may well be that this is the most important long-run component of our foreign aid effort. There is a growing belief on the part of many economists that human capital may be the most critical element in the growth of nations.

The rate of development in our own country, and the remarkable recent progress in countries like Mexico and Japan, cannot be fully explained by increases in the investment of capital nor in man-hours worked. The explanation apparently lies in the steady improvement in the quality of human resources.

Unfortunately mankind has had no significant prior experience with technical cooperation on a massive, cross-cultural basis. We know very little about the process of economic growth, and even less about the ways in which one society can help another society acquire skills and knowledge, particularly a society which is at a different stage in economic development and possesses an entirely different cultural heritage. This is a largely unexplored frontier of knowledge, and those who are engaged in technical cooperation are in a very real sense pioneers.

Our experience with technical cooperation has already taught us one important lesson: The process of helping others to acquire skills, values, ideas and attitudes, and to adapt them to their own cultural settings, takes time. Our initial expectations that technical programs would result in rapid transformation of other societies were born of ignorance. The habits, patterns and institutions of a culture do not always change quickly. If we expect to make a real contribution to the economic and social progress of less developed peoples, we must reconcile ourselves to a sustained and long-term technical assistance effort, and we must organize ourselves accordingly.

The three universities which are sponsoring this conference have been extremely active in helping our Government in the technical cooperation programs. Together they are working with ICA through a dozen contracts. These contracts involve diverse activities such as work in the field of public administration in Brazil, Vietnam, and Ja-

pan, and assistance to education in Thailand and Nigeria. They are also hosts to more than 1,700 foreign students, many of whom receive their training as part of the technical cooperation program. In addition, they are doing important research—in the development of new techniques, in the training and orientation of personnel for oversea service, in the problem of intercultural communication, and in methods for evaluating technical assistance programs. We in ICA are most grateful for their extensive and continuing support.

We have been prone to assume that the mere transfer of information, skills, or knowledge would, by itself, have some miraculous catalytic effect. Often technical advice cannot be effective unless accompanied by some physical or financial resources. For example, when we demonstrate the use of better seed, the value of fertilizer, or the proper method of establishing a health center, the effectiveness of the demonstration will often depend upon the provision of enough seed, fertilizer, or medical equipment to permit the widespread practical application of the knowledge conveyed.

Moreover, many countries find it impossible to finance the local costs of measures which are necessary to spread the benefits of technical assistance. For example, they often cannot underwrite the domestic costs of building the schools or constructing the clinics that are necessary to disseminate widely, or to employ on a large scale, advice provided them in the fields of health and education.

These are some of the problems. We do not have all the answers, yet, but, constantly searching for answers, we have learned much—about other nations, about the world, and about ourselves.

Before concluding, I would like to say a few words about the role of the university in this important mutual security undertaking. The universities are already making large and important contributions, but there are several areas in which the university community as a whole could perhaps do more. In the first place, I would like to see the university community drawn more fully into the process of aid policy formulation. Conferences like this one can be extremely useful in this respect.

Some way must be found to enable universities to release their most talented and valuable faculty members for substantial terms of service overseas. We must also find ways by which the leaders in business, trade unions, and the several professions can be recruited for similar tours of duty.

A second area in which the universities might do more is in those phases of the foreign aid program for which they have operational responsibilities. For example, more attention should be given by institutions to the adaptation of courses to meet the particular needs of students from other cultures. Courses tailored to fit the requirements of an American who will spend his life working in an American setting will not always be helpful to the individual who comes from, and will return to, a radically different environment.

A third area is the university contract. I think we are all still woefully ignorant of the circumstances under which, and the manner in which, this important device can be used with greatest effect. I therefore welcome the information that one of the universities involved in this conference is about to evaluate its own experience with such contracts.

Finally, I think the universities have a responsibility for helping to develop, and then for carrying out, educational programs that will produce an increasingly large supply of Americans who are eager and qualified to engage in this difficult job.

I recognize that the great universities are neither unaware of, nor unresponsive to,

May 27

these several responsibilities. I mention them in order to stress the high importance which we in ICA attach to the role of the

universities in our work.

I return now to the theme with which I began. The world situation is one that will require the extension of foreign economic assistance on a very substantial scale for the remainder of the 20th century. There is no alternative course if we wish to survive as a free Nation. This aid program will be costly, but we can afford its costs far better than we can afford the disastrous consequences that would flow from either its cessation or serious cuts.

One further word. To me, the present situation, despite its vast and difficult problems, represents the most creative and constructive opportunity that man has ever had—the creation of free and equal societies

in a world at peace.

School Construction Assistance Act of 1060

SPEECH '

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10128) to authorize Federal financial assistance to the States to be used for constructing school facilities.

Mr. GIAIMO. Mr. Chairman, those of us who are concerned about the status of public education in the United States in the 1960's think in terms of the population explosion, the increase in school population, the availability of properly trained and qualified teachers and the existence of the physical facilities needed to properly house and teach this growing school population.

Those of us who come from New England have always prided ourselves on our concern for the educational needs and requirements of our young people. Historically, New England has always given special emphasis to the problems of public school education, and it is my fervent hope that it shall always continue to

do so.

Too often, however, I have heard the comment made that New England does not need Federal aid or, as some prefer to say it. "Federal interference"; it is agreed that New England can and will provide for the public school needs of its young people without the need of Federal financing. Perhaps this might be so but only at such an increased tax burden as to make one wonder whether the region or parts of it would actually undertake such a burden.

The educational needs of the New England region in the decade 1960-70 are staggering in terms of classroom needs, teacher salaries and fiscal expenditures. In reviewing these figures, I want to stress the fact that these requirements are just to maintain the level of education as it has been. There are many of us in New England who are not satisfied with the qualitative level of public education and want to see it improved even

though we realize it can only be done at increased costs. We want the best education available for our children, not some toned-down substitute designed to fit into a predetermined arbitrary budget. We from New England simply will not accept the proposition that America cannot afford to give its children the best education possible.

The Federal Reserve Bank of Boston. recognizing the problem of education in the sixties has recently compiled some statistics which it has written in its monthly publication, New England Business Review of March 1960. I should like to give you some of these statistics.

The elementary school population in New England had its greatest increase in the 1950's as a result of the postwar population explosion, but the high school population will have its great increase in the 1960's.

The elementary school population will increase by 7 percent in the 60's, but the high school age group is expected to increase by 27 percent. New England had 2,030,000 elementary and secondary school students both in public and private schools in 1955-56, the last year for which complete statistics are available. and will have an estimated 2,677,000 in 1970. In New England, a higher proportion of the school age population than in the Nation as a whole attends school and attends school for longer periods.

In 1958 there were 70,500 classrooms available in New England for public elementary and secondary education. The U.S. Office of Education estimates that this was 7,000 short of the number needed to eliminate overcrowding and to replace unsatisfactory or obsolete facilities. By 1970 it is estimated that we will need an additional 13,000 classrooms. Thus to eliminate the existing shortage and to take care of the projected increase in enrollment we will need over 20,000 classrooms in New England by 1970. If we adjust for the elimination of unsatisfactory classrooms and for the establishment of regionally integrated schools rather than the smaller inadequate secondary schools, we will need approximately 27,000 classrooms by 1970.

In the fall of 1958, New England employed 71,000 full- and part-time teachers in public elementary and secondary schools. In the 10 years from 1960 to 1970 we will need 19,000 additional teachers.

In addition, the replacement of teachers in public elementary and secondary year at conservative estimates. means that New England will need in the period of 1958 to 1970 approximately 98,000 additional teachers.

This need for new teachers will be in the face of increasing demand for educated persons by industry. At current salary rates it will be very difficult to compete with industry for these 98,000 well-educated people.

These figures compiled by the Federal Reserve bank of Boston give us a good idea of the problem facing us in New England in the next 10 years. My estimate is that these problems are even greater when we look at the Nation as a whole.

The problem then is what do we as a Nation propose to do about this constantly growing problem?

It is so easy to say it is a local problem-it is a State problem-this cures nothing. The fact of the matter is that we must recognize that American public education needs financial help. It needs it just to keep up with minimal future needs. It needs it even more to provide the proper quality of education to which American boys and girls are entitled.

The cost of financing this tremendous growth in New England education and, in fact, throughout the entire Nation will have to be borne by the taxpayer. There is no other soltuion. Our New England States are limited in how much more money can be raised by real property taxes. Real property taxes by their very nature must be reasonable. To increase them unreasonably would have severe economic results. The possibility or wisdom of increased sales taxes or State income taxes is extremely doubt-

There is no doubt that the Federal Government has preempted the tax field through the operation of the Federal income and inheritance tax laws. I believe that Federal taxation is the most logical and the most equitable way of raising revenue. I further believe that the most logical and equitable manner of financing the great educational growth necessary in the period 1960-70 must be through Federal financing. There just is no other practical way.

The objection of some that Federal aid means Federal control is not a valid one. It avoids the issue; it beclouds the one existing problem; namely, that the States need help. The pending legislation has ample safeguards to assure local and State control.

If we are in favor of an adequate public school system in the decade ahead of us, we must insist upon Federal participation through financial aid.

Library Services Act

SPEECH

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. BOW. Mr. Speaker, we shall soon be called upon to extend the so-called Library Services Act. Our friends on the other side of the Capitol already have done so. The other body passed their bill on the Consent Calendar-another 5 years of grants-in-aid to the States at \$7.5 million annually.

My good friend from Ohio, a former Member of this House, Cliff Clevenger, said many times:

There is nothing as permanent as a temporary agency in Washington.

Cliff was a statesman with rare insight into things to come.

The RECORD for May 26, 1960, on page 10402, contains the passage of the bill by the other body. Listen to this language, Mr. Speaker:

Prolonging the life of this law is necessary if we are to carry on the great effort to bring better public library service to the rural areas of the Nation.

I am sometimes impressed by the New York Times editorials. This is what they said in 1956, as shown in the Congres-SIONAL RECORD of May 8 of that year:

The library services bill is now before the House. The list of sponsors is bipartisan.

This bill would grant a total of \$7.5 million a year for 5 years to States matching the grants. The objective is to bring books and other library services to rural families Who have none at all, and to improve library services for an additional 53 million Americans whose libraries are inadequate. The States and localities will have complete authority under the program established by the

In the great cities we are accustomed to Impressive library service. Our cousins in the villages and on the farms are entitled to it too. This legislation would stimulate the extension services of the various States and the regional cooperative services based on metropolitan centers. The funds proposed are modest, the period limited. It is believed that local communities in rural areas, having tasted the advantages of good libraries, would then wish to continue the services with local and State funds.

There are some, I am afraid, who rather blindly follow this great newspaper of metropolitan New York. May I say, Mr. Speaker, I cannot be counted among those who follow them down the aisle. You see, they said, "the period limited."

Now, in the RECORD of May 26, 1960, is another editorial which I include with these remarks:

[From the New York Times, Feb. 12, 1960]

FOR RUBAL LIBRARIES

Public Law 84-957, which expires June 30, 1961, is known as the Library Services Act. It was enacted in 1956 to provide such services to raral areas of the United States. The act authorized \$7,500,000 annually for 5 years for grants-in-aid to the States.

Behind these sentences lie 4 years of constructive activity by the State library ex-tension agencies, which by means of State and Federal moneys have brought library services to 30 million Americans in communities of 10,000 or less that never had any library service or enjoyed only inadequate services. The Library Services Act has brought to Alabama four new regional libraries, to Idaho the first trained administrator for the State library, to Mississippi a statewide conference on book selection, to Ohio bookmobile grants to five counties, to West Virginia centralized book-ordering Bervices.

The multiplicity of libraries in the great urban centers dulls the senses to the want of the rural areas. In order to help the rural areas continue their newly established services S. 2830 has been introduced in Congress. This bill is an amendment to the Library Services Act. Its purpose is to ex-tend for 5 more years the authorization for appropriations in order to continue the services already developed and also to bring them to at least 40 million people who as yet have not received them. Unless S. 2830 is acted on favorably in this Congress there will be no consideration for funds for library services for the 1961-62 fiscal year. It is hoped that this bill, which has the backing of 52 Senators, will find the remaining support necessary for enactment.

May I say, Mr. Speaker, "consistency, thou art a jewel."

In 1956 the Times said:

The funds proposed are modest, the period

In 1960 they say:

Unless S. 2830 is acted on favorably in this Congress there will be no consideration for funds for library services for the 1961-62 fiscal year. It is hoped that this bill, which has the backing of 52 Senators, will find the remaining support necessary for enact-

The debate, as is found in the RECORD of May 8, 1956, is most interesting. May I quote what some of my colleagues had to say at that time:

The gentleman from Mississippi [Mr. COLMER!

The passage of the library services bill would mean a greatly accelerated program of library development in my State during the 5 years of the program. This legislation will provide the stimulation needed to increase the interest and support necessary at the State and local levels so that our public libraries can take their important place in our educational system.

The gentleman from Georgia [Mr. LANDRUM]:

Emphasize again, will you, that this bill is for a 5-year period and is to serve as a stimulus only. It is hoped and believed by those who appeared before this committee that these subdivisions of the States and the States once the service becomes available, the people will not be without it again.

The gentleman from Arizona [Mr. RHODES ::

This is a program which lasts for 5 years.

The gentleman from Alabama [Mr. ELLIOTTI:

If we pass this bill, providing the small amount of \$71/2 million per year for 5 years, I want to hazard the prediction that at the end of the 5-year period the system of rendering library services by bookmobile will have spread all over rural America.

The gentleman from Mississippi [Mr.

The people know of the terminal phase of this legislation. Already their plans have been laid with that in mind. They have known that what State aid they had, small as it has of necessity been, involved in the ever-present necessity of supporting them-selves. With Federal funds, they face the same realistic approach.

The gentleman from Nevada [Mr. Youngl:

The library services bill will stimulate library development during its 5 years. We are for the library services bill, because it is terminal legislation.

The gentleman from New Hampshire [Mr. MERROW]:

This development needs to be done on a large scale throughout the country and can be brought about within the 5-year program of the library services bill. Such systems will be able to carry on the services after the Federal help is withdrawn.

The gentleman from Kentucky [Mr. PERKINS1:

The proposed program would be limited to 5 years. We have proof that after this period a rural library service program is most likely to be continued through local and State support.

The gentleman from New Jersey [Mr. THOMPSON]:

I firmly believe that if our people are provided for a period of 5 years with good libraries staffed by well-trained personnel dedicated to serving the people, they will never want to do without them again. I believe that when Federal funds cease after the 5th year, the States and the communities will somehow find other sources of revenue to continue the services they have learned to appreciate.

The gentleman from West Virginia [Mr. Burnside]:

It provides a terminal date of 5 years from passing for the completion of the program. It is not the beginning of a continuing Federal-aid program. Community and leaders as well as librarians are convinced that the help over a 5-year period will reduce the problem for the States and local governments to where they can easily finish the job in this generation.

The gentleman from Oklahoma IMr. ALBERT]:

It is contemplated that during the 5-year period the States and local communities will develop their own library-service plans which will permit the Federal Government to discontinue its work in this field.

The gentleman from Alabama [Mr. ROBERTS1:

The duration of the program is 5 years. This is adequate time for the States to undertake positive programs. It is anticipated that once the programs are started during the 5-year period, Federal assistance will no longer be needed.

The gentleman from California IMr. ROOSEVELT1:

All we are trying to do is to stimulate the States in helping them move forward and getting started those that have not started.

The gentleman from Massachusetts [Mr. BOLAND]:

There is no doubt it will demonstrate the tremendous value of a good library system resulting in the local communities carrying the load when the Federal grants have ceased.

The gentleman from Arkansas [Mr. Hays]:

It cannot be overemphasized that the purpose of this grant-in-aid is to stimulate a service, not to underwrite it or to permanently assume a share of it. I am sure we all applaud the 5-year limitation. As a member of the Commission on Intergovernmental Relations, I became somewhat familiar with the Federal Government's involvement in grant-in-aid programs which were difficult to terminate and this bill may help to reverse that tendency.

It is also interesting to note that the former Representative from Massachusetts, Mr. Heselton, closed the debate with a speech in which he said:

I wish I could believe that this will be only a 5-year temporary program of Federal assistance with the result the majority of the committee foresees that it will be "carried on in the future by State and local communities without Federal assistance." That is not the record, the undisputed history of Federal assistance programs. Even though few of us may be here to make the further decision, I venture to suggest that in 1961 Congress will be asked to continue the program, unless we here this afternoon decide that this is the time when we must make the full results clear, of the constant impairment upon the self-respect, the initiative and the incentive of our own people, through their State and local governments, when they can do as well or better for themselves than they can through the Federal Government.

No prophet ever uttered a more truthful statement.

Now, Mr. Speaker, in my State of Ohio, we have an intangible tax law. Last year Ohio paid \$31,308,102 in intangible tax and from this amount \$21,261,612, or 67.91 percent of the total, was distributed to libraries.

Yes, Mr. Speaker, we are told we must pass on Federal funds for the States or our people may become illiterate. Even though \$21,261,612 goes to our libraries from State funds in Ohio, I guess I am supposed to believe that they could not operate without the \$270,635 Ohio receives in this grant-in-aid.

Ridiculous? Of course it is ridiculous. Do we believe in States rights or do we not? If we do, we must recognize State responsibility. And I submit that one

of those responsibilities is to take care of our libraries. How about endowments? I wish we could list them State by State, county by county. Grants-in-aid are the Frankenstein that has devoured self-respect, self-government, and Federal fiscal responsibility. Let us face up to it now.

I include in my remarks an article covering the intangible tax distribution in Ohio. I hope my colleagues will read it. Do they, or do you, Mr. Speaker, think we need an extension of the temporary Library Services Act.

INTANGIBLE TAX INCREASES—MUNICIPAL PARTICIPATION DECREASES

A recent news release from the office of State Auditor James A. Rhodes disclosed that public libraries received more than twothirds of the \$31.3 million in county intangible taxes paid by Ohioans last year.

Reports filed with State Auditor James A. Rhodes by county auditors on the distribution of the intangible taxes paid at the court houses show that libraries received \$21,261,-

612 out of the \$31,308,102 distributed. This was 67.91 percent of the total, and a quarter-million more than they got in 1958.

City and village governments received \$8,251,114 or 26.35 percent; county governments, \$1,558,077, or 4.9 percent.

The State of Ohio received \$78,339.84 for administrative purposes, and the balance of \$158,959 went mostly to park districts, or was not distributed.

The libraries' share of the county intangible tax ranged from 27.9 percent of the total in Geauga County to 99.75 percent in 10 counties as follows: Allen, Gallia, Guernsey, Hocking, Lawrence, Morgan, Paulding, Perry, Vinton, and Warren.

Cuyahoga County which collects more than one-fourth of the county intangible tax topped all the large counties in the amount and the percentage that went to libraries, \$6,981,000, or 87.21 percent of the total distributed.

In Hamilton County libraries got 37.21 percent; in Franklin, 81 percent; Lucas, 74.83 percent; Montgomery, 66.14 percent; Summit, 65.2 percent; Stark, 73.38 percent; Mahoning, 81.77 percent.

The Summit Conference

EXTENSION OF REMARKS

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. OLIVER. Mr. Speaker, it seems to me that the debacle at Paris when the highly publicized summit conference was sabotaged by the arregant, contemptuous and bellicose Khrushchev should and must alert us to the urgent need for our awakening from the attitude of complacency which has characterized our defense efforts of the past several years.

Wishful thinking and hoping for that period of peace and tranquility which we envision in the words of the scheming Soviets—namely, peaceful coexistence—has deadened us to the realities of this period of the world's history in which challenges and repeated challenges have been and will continue to be thrown at us.

It is inconceivable to me that any American who is willing to face up to the facts of life can conclude that we have any course of action open to us except more defense efforts as well as a deeper realization that we must fortify ourselves for more intensive psychological warfare.

Our increased defense efforts must include among other items:

First. The more rapid expediting of the modernization of our Army and an increase of divisions.

Second. An increased expansion program of Polaris submarine construction and implementation.

Third. An expediting of our program for nuclear propulsion for air and space craft.

Fourth. More urgency in our efforts to develop our space reconnaissance capability. Without reconnaissance capability, being practiced to its ultimate, we are, indeed, asking for another Pearl Harbor. The American people and the people of the free world for that matter must be informed of the difference between espionage and reconnaissance. The first being Soviet in its implications and the latter, being American. We need

more information through reconnaissance.

To supplement these views, Mr. Speaker, I submit, herewith, my radio speech of May 22, 1960, over station WGAN of Portland, Maine, through the courtesy of the Gannett Publishing Co. and its able and alert Washington correspondent, May Craig:

BROADCAST OVER STATION WGAN RADIO, PORT-LAND, MAINE, MAY 22, 1960, BY HON. JAMES

Ladies and gentlemen, in the light of the World-shaking events of the past week at Paris, there can be only one subject to dis-cuss with you today, my friends. That sublect, of course, is the torpedoing by Khrushchev of the long-publicized and, in most quarters, the desperately desired summit

conference of the Big Four.

I have used the words "in most quarters' advisedly, because the people of the world had been sold on the hope that this meeting of the leaders of the four big powers of the world could, and would, in some magical manner, pull a rabbit out of the hat and irreconcilable, as it seems to me, issues Would be amicably settled. At the least, the people of the world had been brainwashed with the illusion that a summit meeting could result in a relaxing of tensions between the free and the regimented worlds.

Inviting Khrushchev to visit America, Without first obtaining from him some promise, for what it may have been worth, was the first mistake that our policymakers made. Then, after his arrogant and contemptuous attitude had been completely displayed, and we had been influenced to overlook his boasting and his insulting conduct while he was a guest of the President, the Madison Avenue soap-selling technique came into full tempo. Remember the hog-Wash which sounded the theme song of the spirit of Camp David. The beautiful dove of peace was flying at the masthead of practically every newspaper in America. The summit conference was to be the culmination of the dedicated efforts for settlement of these issues which have continued to bedevil the world in the form of the cold war. The irreconcilable ideologies of the socialistic-communistic and the capitalistic camps Were to be submerged in compromise. erybody was to save face. Nobody would be an appeaser. In short, the wonderful rabbit was to jump out of the hat.

But the leopard never had changed his spots. Khrushchev never did have any intention of yielding by one inch. His intentions, in my opinion, were as always to play the Western World for suckers. He intended and did use the sounding board of the stillborn summit conference for the purpose of throwing his weight around. He merely rebeated in a more vigorous and a more insulting technique the same attitude which he expressed while on his visit to America as

the guest of our President.

I took the position, then, that we were making a mistake in our invitation to him to visit this country. We now find our gullibility being paid off with insults such as no head of a great power would ever have thrown at another great power, unless he was prepared for the showdown of war.

The Russia of today has not changed one tota from the Russia of Stalin, so far as its basic objectives are concerned. We never learn a lesson from being kicked around. When Stalin was as truculent, as demanding, and as doublecrossing as Khrushchev is today, we swallowed his insults in our efforts to get along with him.

These butchers in the Kremlin remain butchers and compromise is practiced by them in only one way, and that is down a one-way street in which they are determined to control the right-of-way. Our yielding and mild policy for the hope of cooperation only results in continued yielding. Peace-

ful coexistence in the language of the Soviets means only one thing, and that is on terms to be established by the Soviets in their own hest interests.

We cannot placate an attitude of implacability except by yielding our own self-respect. They are hard and we have been soft. They know where they are going and use every devious and calculating means to get there. We indulge in wishful thinking and fail to evaluate the hard, uncompromising determination of these ruthless despots. They are surging ahead with everincreasing momentum while we are beguiled along the primrose path of complacency and ill-advised optimism.

It is no surprise to those of us who evaluate the Soviet leadership as unscrupulous, cunning, crafty, and tough dedicated men without any consciences whatseoever that Khrushchev would act like a Hitler. Any man, drunk with power, is certain to throw his weight around when he believes that he is serving his purpose in so doing. should blame ourselves for allowing ourselves to be such dupes, as we have been.

Khrushchev is still feeling his first sputnik, which our present leaders did their best to downgrade. The Soviet shot at the moon; their photographing of the back side of the moon; their latest space vehicle which could mark another first in the very near future; their progress in the sciences, including oceanography with which I have some familiarity, and their drive with purpose to goals which we had estimated as unattainable for them for many years have combined to develop the arrogance which Mr. K. threw without restraint at our President and at us at the Paris debacle.

Once again, let me refer to the kind of peaceful coexistence which the Soviets envision by citing these words of Lenin: "The existence of the Soviet Republic side by side with imperialistic states for a long time is unthinkable. One or the other must triumph in the end. And, before that end supervenes, a series of frightful collisions between the Soviet Republic and the burgeois states will be inevitable." Khrushchev has openly stated that Soviet Russia will never abandon its goal of world conquest. It is true that he may not have used those exact words; but, he did state at the National Press Club, last September, while he was the geust of the President that "the foreign policy of the Soviet Union is founded on the Leninist principle of peaceful coexistence of states with different social systems." In the light of this stated philosophy which dominates the Soviet consecration to its goal and objective, is there any further need to beat our brains out, trying to find some other hidden or farfetched motivation for Khrushchev's brutal and barbarous treatment of the United States at the Paris fiasco? It satisfies me to take him as he is and not get all confused by trying to think of him as something different. He represents an economic and governmental system which is directly and completely the antithesis of America. As the leader and spokesman of this system he has boasted that "we will bury you." This is reason enough for me to be convinced that we should not fool ourselves any longer with wishful thinking that we only need to close our eyes to the realities of the world in which we now live and the big bad wolf will go away.

We have been badly shaken by this episode: but, we asked for it. We probably will be shaken again and again and again during these next few days, weeks and months. To me, this means that we must be tough without being truculent. We must be resolute without being rabid. We must be persistent without being punitive. Khrushchev is rattling his rockets. To me, this means that we must transform our complacency of dream world thinking into an attitude of action. We are in a race for survival whether we like it or not. The

true face of the Kremlin was displayed at Paris.

In short, the United States and our allies, as well, must heed these storm warnings. Mr. K. has been acting, under instructions from the Kremlin, like a hurricane and if we have the commonsense to meet this challenge, we must batten down the hatches. It will be wise, in lieu of speculating why "Khrush" blew his top to check ourselves, for the purpose of urgent correction, and examine: (1) the reasons why we have slipped in prestige during the last 5 years among them being psychological negativism, loss of dynamism, the obvious subordination of defense needs to the sacred cow of the budget and refusal to acknowledge that we are in a contest in space as well as in every other phase of our national being.

Crying national crocodile tears over the U-2 affair, in my opinion, only helps Khrushchev to inflate this cause celebre to a manifest absurdity. One has only to know that the Soviets are making regular reconnaissance flights over England every day in order to place this defense activity of ours in its proper perspective. This is not the most sordid crime of the century. If we were not using every logical and possible means of gaining information concerning the activities of this avowed enemy of America, we would, indeed, be derelict in our responsibility even to the point of treason. do we think that we should have a guilt complex because of this effort to protect our own country against a communistic dictator-ship which has looted and murdered across half of Europe? Have we forgotten Budapest? Have we forgotten the murder of East Berliners who were fighting for freedom? Do we have to apologize to ourselves or to the world which knows from firsthand experience in practically every corner of the globe of the operation by the Soviets of the most massive and, yes, the most malignant espionage system ever known in the history of the world? I think that we should not be beating ourselves over the head for acting in our own self-defense which is, by the same token, the defense of the free world. These cries of Khrushchev are just so much public relations fakerism and we certainly are ridiculous if we continue to upgrade them to anything different by our own breastbeating.

Khrushchev, in my opinion, never did have any intention of making the summit conference a success in causing international tensions to relax, except upon his own terms. If this could not be done, then, he intended to do just what he did: Namely. use it as a sounding board for world attention and propaganda by telling off the three leaders of the Western World.

The U-2 episode only served to make his objective, more attainable and in his viewpoint, more justifiable.

The real issue is where do we go from here? How do we pick up the pieces? ment on the halting of nuclear and thermonuclear testing, moves toward sincere mutual disarmament, and relaxing of cold war tensions are still on our agenda. But, I fear, that Khrushchev and the Kremlin will, and as a matter of fact, already have, planned more moves of brinkmanship. The free world must be prepared to withstand more shocks of psychological warfare.

It could be that, within the next few days, the Soviet space vehicle will reenter the earth's atmosphere and make a landing with the first spaceman of all time as we know it. If this is accomplished, the impact on the world and, upon us, will be catastrophic. How will we protect and harden ourselves against this further softening technique of the Communists?

What happens when, as, and if these possible and even probable acts of brinkmanship develop, namely:

1. The signing of a separate peace treaty with East Germany and the subsequent acts of harassing and closing off the Berlin high-

way and air corridor?

2. The march of North Koreans into South Korea?

3. The military aggression against Quemoy and the Matsu Islands?

4. Increased over acts by Castro?

5. Further agitation and overt acts in Panama?

6. Stepping-up tensions in Turkey and in strategic areas of the Near East?

Are we prepared, psychologically and militarily to stand up resolutely against these acts of aggression, directed toward softening

us up for the kill?

The communistic art of disarming an opponent with smiles and tokens of good will and then, at the proper psychological moment of withdrawing, scowling and threat-ening have been well demonstrated by the visit of Khrushchev to our land, followed by the phony talk about disarmament and world peace in the spirit of Camp David, then, concluding in the fiasco of the Paris summit conference.

This should be sufficient indoctrination for us in communistic cunning to prepare us when more of the same treatment falls

on our collective head.

The only answer for us is to get the big-gest possible stick at the earliest possible date, speak softly but resolutely, say what we mean and mean what we say, fully realizing that further appeasement can only mean living on our knees for generations to

The Soviets respect nothing except power and strength, both mental and physical. Our leaders must measure up to this yardstick or else.

This, my friends, is what the U-2 incident and the collapse of the summit mean to me.

School Construction Assistance Act of 1960

SPEECH OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10128) to authorize Federal financial assistance to the States to be used for constructing school facilities

Mr. DONOHUE. Mr. Chairman, because of the overwhelming evidence on record showing the urgent need of improving school facilities throughout the Nation, I rise in support of this bill granting reasonable Federal assistance to the States for such purpose.

In the development of a legislative proposal toward law enactment, it is our democratic custom to afford opportunities for advocates and antagonists to submit their evidence and views through committee congressional There is no need for me to recount the convincing mass of statistical, and other objective evidence, presented by the foremost educational authority in the country and contained in the record of committee hearings, over the past several years. Their concrete facts and figures leave no question about the great deficiency of educational facilities around the country.

There is also no need for me to reiterate the testimony of the multitudinous officials of States and municipalities demonstrating that their various States are wholly unable to provide, from their own drained resources, the urgently required improvements in school facili-

The two basic factors involved are the need for school improvements and the inability of the States to construct them. Since these two factors have been proved beyond question, it appears to me that there should be no reasonable doubt that this measure should be approved.

With full realization of the consequences that may follow from the collapse of the Paris summit meeting, there ought to be no uncertainty about the imperative necessity of accelerating our preparations to meet the Russian Communist on every front, including the educational front. Realistically admitting our past mistakes and factually facing the import of a long, continuing cold war atmosphere, let us wisely now take the steps to guarantee that our youth will be adequately trained to meet and beat the Communist challenges in the future.

There can be no better or wiser economic planning for the future security of America than a reasonable investment for the superior schooling of the country's children. Let us endorse and approve that practical investment today.

If we can afford to generously grant, in Christian concern, many billions of dollars for the advancement and training of people in undeveloped countries throughout the world then surely we can afford to provide reasonable assistance for the training and development of the children of the burdened American taxpayers.

Today, the "Edmonds"-Tomorrow. World Trade

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. ULLMAN. Mr. Speaker, last week the destroyer U.S.S. Edmonds made its way up the Columbia River to the inland port city of The Dalles, Oreg. My colleagues will be interested in the following editorial from the Dalles Optimist. which points out that this historic visit of an American fighting ship some 185 miles upstream from the mouth of the Columbia marks the creation of a new ocean waterway of great importance to the future of the Northwest and the Nation:

[From the Dalles (Oreg.) Optimist, May 19, 19601

TODAY, THE "EDMONDS"-TOMORROW, WORLD TRADE

Arrival of the U.S.S. Edmonds, a destroyer escort of the U.S. Navy, in The Dalles this Friday for a 3-day stay, with open house aboard the vessel on Saturday—Armed Forces Day-marks a definite milestone in the long and varied history of this century old city.

For one thing, it marks acceptance by the Navy of the existence of a usable channel from Vancouver upriver to The Dalles for vessels of this size—in the case of the Edmonds, more than 300 feet in length with a draft of 16 feet.

With completion of the deep-draft (27 feet) channel next month, port of The Dalles will technically be in position to serve the commerce of the inland empire region. Ac-tually, this is not the case since it will first be necessary to construct suitable facilities before the potential commerce of the region can be moved from The Dalles into world markets.

However, potential commerce is already here since savings can be achieved by Harvey Aluminum by the movement of alumina to The Dalles by ship and shipment of other cargoes to their plant in the Los Angeles

Outbound cargoes of wheat for the Orient also are potentially available for return cargo on alumina ships since savings are possible. In industry and commerce, that's reason

As the potential of these two basic cargoes is realized, commerce will be expanded to s wide range of export commodities produced in the interior.

Thus, the arrival of a naval vessel here is symbolic of future commercial use of this new seaway which will be of vast importance to the economy of the region, largely dependent upon marketing of wheat.

Strangers to Portland, no doubt, are always somewhat amazed to find oceangoing vessels in the snug harbor provided by the Willamette River, and during rose festival time, to note the presence of destroyers and cruisers. But Portland is truly a maritime city, and the same some day can be said of The Dalles, 86 miles farther up the Columbia-great river of the West.

Flags will be flying on the U.S.S. Edmonds in The Dalles harbor as that vessel on Friday afternoon becomes the symbol of a new age of waterborne commerce for the city and region. All of us should join in welcoming the officers and crew of the Edmonds, and we're sure the reception, both official and public, will be a rousing one. This is an auspicious occasion, not unlike the arrival of the first trains a half century or more ago over highways of iron.

In the wake of the Edmonds will move the commerce of an empire over the waterway afforded by Bonneville Pool.

This week bids were called by the Corps of Engineers, U.S. Army, for modification of the channel just below Bonneville Dam to permit the easy passage of large vessels through this area now made difficult of passage by strong crosscurrents.

This project of the engineers is solidly based on the economics of the situation. promising numerous benefits to those of us who live and work in the area east of the Cascade Mountains.

The Dalles for more than a century has been a crossroads of commerce, first as the point of contact between stagelines into the interior and the river boats which first plied the Columbia.

Now railroad and truck and buslines serve the commercial and transportation needs of the area on land, and barge fleets handled by diesel-powered tugs, move waterborne commerce up the river as far inland as Pasco, and out of The Dalles to all parts of the west coast and even to Hawaii.

The potential for development of port of The Dalles as a world port clearly is here How soon that time is coming will depend upon the vision and energy of the port commissioners and their staff, and of the foresight of the people of the port district.

Opportunity is knocking. The development of suitable deep-draft facilities must not be long postponed.

Appendix

Address by Adm. Arleigh A. Burke, Chief of Naval Operations, at New Castle, N.H.

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a speech delivered on Thursday, May 26, at New Castle, N.H., by Adm. Arleigh A. Burke, Chief of Naval Operations.

Admiral Burke's address was made under the auspices of the New Hampshire Apprenticeship Council, chairman of which is Mr. James P. Lynch, a distinguished publisher of my State, and was attentively received by several hundred representatives attending the 16th Annual Eastern Seaboard Apprenticeship Conference from a large number of Eastern States, as well as from our neighbor, Canada. I had the pleasure of introducing Admiral Burke on this occasion, and of hearing his remarks in person. His forceful and penetrating analysis of the strength we enjoy as a free society justifies his reputation as one of this Nation's distinguished military

I believe that Admiral Burke's remarks Warrant the attention of all thoughtful Americans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure to be with you today. Your annual conference renders a great service, not only to yourselves and to industry, but to the Nation as well.

Your efforts to meet America's continuing and growing need for skilled craftsmen are truly commendable. The need for skills has kept pace with rapid advancements in science and technology, and with the increasing demands for goods and services throughout our economy.

The marvelous improvements, so characteristic of American industry, automation, machines of increasing capability and complexity, bring with them an urgent requirement for more and more skilled workers.

Even in this age of wonders, there is no simple button to push which then provides the necessary skills. It takes education and training, and much conscientious hard work. Your continuing interest in apprenticeship programs shows your clear understanding of the need for skills, and the way to get them.

All the armed services, too, feel the pressure of technology; for we depend greatly on highly complex equipment and weapons systems, all vital to modern warfare.

This basic need for skilled, highly qualified workers, in the military, in industry, in every flield of technical endeavor, has been even further magnified by the grave competition

thrown at us by Communist imperialism. Fortunately, competition is as American as the hot dog. We are good, extremely good, at it. We know how to compete, and we know how to work to win. Even so, and especially now, there is no room for complacency, or for apathy. The challenge is great.

Our ability to produce, to sustain our economy, to meet the needs of national security, while still guaranteeing the basic freedom and dignity of each man, has been challenged. We have been challenged by a monolithic, tightly controlled despotism, whose unwavering goal is the overthrow of freedom, the subjugation of all mankind.

That this goal is unchanging, could be no more clearly illustrated than in the events of recent weeks. Communists may blow hot, or may blow cold. Their tactics may change with the seasons; words of apparent sweetness may give way to words of wrath and anger. Compliments may be followed by insults, deep insults. Our friends may be threatened. Through it all, despite all the appearances of change, the godless goal of world empire remains constant and unremitting.

In this competition, each side is significantly different in nature. We have different needs, and different responses to them.

Our societies are radically different. We are blessed with an open society—a democracy. The Communists, wherever they are in power, have exactly the opposite, a closed society—a despotism.

The open society is the guarantee and hallmark of internal freedom. Freedom to speak, to act, is the stamp of democracy; the key to individual freedom, full freedom. Such freedom can only exist in an open society, where the voice of the people is heard, and heeded.

People, everyday people, men, women, and children, all mankind, deplore and denounce military aggression. As a result, the open democratic society, where people have so great a say in their government, in their national policies, is not militarily aggressive.

But, because the American people are vitally interested in the defense of so wonderful a country as ours, they do take a deep interest in military affairs.

In our country, military affairs are constantly under scrutiny. They are discussed in our newspapers; debated in the Halls of Congress, and in public forums throughout the land. The location of airfields, missile sites, and bases, the nature of new weapon systems, arms reduction or buildups, are all in the public domain. No one need fear surprise attack from our democracy.

By contrast, the Soviet society is fully closed, secretive, suppressing all but the one authorized viewpoint. There is no debate. There is nothing to debate.

The Supreme Soviet, which the Communists would have the world believe to be the equivalent of our Congress, is a mere rubber stamp. It meets a few days every year, and unanimously, and invariably, approves everything that the Communist leaders deign to present to it.

In such a society, opposition is suppressed; freedom is suppressed; truth is suppressed; news is suppressed. The ruling clique supplies the information. It prefers to disclose only what it feels is safe for the people to hear—and that is very, very little.

The clique dares not allow people to learn the facts about how others live, the wonderful blessings of freedom. People are allowed to view civil affairs only through "Lenincolored glasses," and those glasses are supplied by the party.

The secrecy that veils Soviet military af-

The secrecy that veils Soviet military affairs is even greater—completely opaque. Soviet rulers do not let people know the vast share of the Soviet gross national product, which goes into supporting those forces, in a land where so much is needed by so many.

Secretive as this closed society is, Communist writings and actions leave ugly openings in their Iron Curtain. Korea, Vietnam, Matsu and Quemoy, Tibet are no secrets.

Matsu and Quemoy, Tibet are no secrets. You cannot hide communism's goal to dominate the world under the butchered bodies of Budapest. It is the aggressions of the past that make the free world worry in the present, that make us suspicious of Soviet actions in the future.

Because the Soviet Union can carry out military preparation in such great secrecy, because Soviet leaders threaten smaller countries so often, the free world must stand alert against surprise attack.

Just as the natures of democracy and of totalitarianism differ, so do their military needs. An open society requires armed forces only to protect the country and its interests. The size of such forces is determined by this need alone, and nothing more. Because its policies are historically, fundamentally, and clearly nonaggressive, these forces are all any democracy needs.

When democracy is left unthreatened, when there is no threat to freedom, when peace really exists, democratic countries tend to reduce their armed forces. Every time international threats dwindled, every time international trust grew, the United States cut back on its Armed Forces. Our forces were reduced to virtually nothing after World War I. After World War II, they also contracted greatly.

This is the automatic response of democracy, when trust and confidence exists among nations. Trust is the basis for any type of arms reduction.

In contrast to the open society, the closed society must maintain large military forces. It needs them, it has to have them, to keep the people in line, to make them obey. This is particularly true for captive peoples like the Hungarians, or the Poles, or the Latvians, or the Rumanians, or the Czechs.

Even though necessary to Communist rule, the very existence of sizable military force in the hands of political conspirators, blatantly aggressive by their own doctrine, constitutes a threat to free men, to independent nations everywhere.

Such forces, along with Soviet words and Communist deeds, further destroy trust; but not inside the Soviet Union. Man cannot destroy something that does not exist—and trust has never existed in that land, nor in any other land where the Communists have seized power.

Because of their lack of trustworthiness, their aggressive doctrine, their military might, the world mistrusts the Soviets' intentions. It watches every Soviet action with the greatest of attention.

As President Eisenhower said in a recent press conference:

"No one wants another Pearl Harbor, This means that we must have knowledge of the military forces and preparations around the world, especially those capable of massive surprise attack."

In this respect, despite all of its many, many disadvantages, the closed society does have one edge over the open society.

The leaders of a closed society need never fear surprise attack from an open society. This feeling of security however, must be concealed from the people; for fear is an integral part of totalitarian control. Mythical aggression must always lurk just around the corner, to justify the vast arms expenditures, to breed hatred of differing philosophies, and to divert unrest.

Yet, to the leaders, it is obvious that in an open society, preparations for a surprise attack would be immediately evident. It does not take any extreme measures to determine this. It is evident on all sides.

On the other side of the coin, in the closed society with its fetish for secrecy and concealment, military preparations can be—and are—screened from all outside eyes. The tightest of security measures prevail, in peace or war.

Thus militarily, Communist massive, repressive secrecy appears to serve them well. In addition to feeling secure from a surprise attack from us; in addition to knowing where fixed American land installations are located; in addition to being able to pinpoint such installations, the Communist hierarchy can also feel relatively certain that American knowledge of Soviet military installations is incomplete—and that it is likely to remain incomplete.

Despite this, the net advantage, and it is a great one, is to our side. For, with the plentitude of military information available in our open society, comes the certain knowledge of our great strength.

As long as the rulers of the Communist empire are aware of our strength, they will not, they dare not, attack the United States. They dare not because they know with certainty that any attack on the United States will, surely and inevitably, result in their own destruction. And they know it—even better than we do.

This is so now, and we are assuring it for the future. We are assuring it for the future, not by engaging in any needless arms race, but by creating capabilities, weapon systems, which cannot be destroyed by anything the Communists can do. Because they cannot destroy such systems, because no matter what they do there will always be significant American retaliatory strength on hand, including powerful nuclear weapon delivery capabilities, they will not dare to

To insure that such systems retain their invulnerability, to guarantee the inevitability of our strength to strike back against an aggressor's attack, we need not adopt the repressive tactics, the secrecy, and concealment, of a closed society. Rather, we may look to the seas, to the natural concealment so abundantly, and uniquely available to us.

God has been most generous to this country. In addition to all other resources, He has given us two-ocean geography. These two oceans provided the road for America's development, and long served as barriers to foreign aggression. Now again, they can contribute to our Nation's security. All we must do is exploit them.

Exploit them we have; and exploit them we will. The seas have never been more important, or more militarily useful to this country, than they are today, as we move into the ballistic missile era.

This is true because ballistic missiles cannot hit moving things; they cannot hit things whose location is unknown. At sea, every ship moves; its location changes constantly. There are 140 million square miles for movement, and dispersal.

Our fleets today, our powerful, versatile attack carriers with their naval aircraft, capable in nuclear, or nonnuclear conflict; our Navy-Marine amphibious teams; screening and supporting ships; all of our naval forces, constantly, without special provision or direction, exploit their inherent mobility. No aggressor would put their address on his ballistic missiles, because it would be useless. Naval forces won't be at that address; they will be someplace else.

Further, by using submarines as launching platforms, we achieve complete concealment. This concealment, behind a curtain of blue water, compounds an aggressor's difficulties in wiping out military strength. This is precisely the reason for the Navy's fleet ballistic missile system, that marvelous combination of long cruising, nuclear-powered submarines and solid propellent, nuclear tipped Polaris missiles.

This wonderous system will add greatly to our Nation's assured retaliatory power. It will shortly provide a strong element of invulnerability to our Nation's mix of nuclear delivery systems. By doing this, the fleet ballistic missile system also adds to the effectiveness of our deterrence of nuclear war.

This seagoing deterrent presents to the Soviet leaders a curtain of uncertainty. The locations of our naval units, held secret in the ocean's deep, are not vulnerable to Soviet espionage; even as extensive as that has been shown to be. The Soviets can never know where all our submarines are. Not knowing where they are, the Soviets will never be able to wipe out our total seagoing deterrent.

The strength of all our naval weapons systems, dispersed, moving at sea, add their capabilities to the land-based strengths of our able Army, and powerful Air Force. Together, our services form the world's most effective defense team. This team reflects all the great strengths of the open democratic society, which they serve.

May God—who has so blessed us—grant that these wonderful United States continue to fiourish in strength, in prosperity, and above all, in the freedom we enjoy today.

The Crisis on the Commuter Railroads— No. 8

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. IRWIN. Mr. Speaker, in the Washington Post this morning there was an editorial on the attitude of some railroads toward passengers which deserves attention from all of us concerned with the plight of our Nation's faltering passenger lines. The piece relates that a New York City official has cited various needs of railroads and it goes on to add that improvement in passenger relations is also necessary. I agree wholeheart-edly. As the representative of a congressional district in Connecticut which faces serious problems because its 35,000 rail commuters are not getting the safe. adequate, and efficient commuter service they must have to get to and from work daily, I have studied a railroad's operations and seen a similar attitude displayed toward passengers, not by the working trainmen but by management. Revision in this attitude is essential if railroads are to make a go of it with any degree of success. I have introduced legislation to help our commuter railroads and transit systems and have inserted a series of articles in the RECORD bearing upon the subject. Legislation aimed at preventing discontinuance of passenger service if such discontinuance is not in the best interest of the public has drawn my support. Railroads need help, yes, but they must realize that they have got to start helping themselves and the best place to start is in the area of passenger relations—on the part of the management as well as the men who run the trains. Under permission previously granted, I include the editorial:

DOWN WITH PASSENGERS

"The railroads," said the peppery and astringent New York public servant, Robert Moses, the other day, "should have more tax exemption, Federal, State, and local; no contributions to pay for grade-crossing eliminations, even when they include incidentally some permanent plant additions; maybe more postal revenues; maybe some advances and loans of public funds at low interest rates for genuine improvements, which in the end will be amortized; and in some cases higher passenger and freight rates; and always fairer treatment by regulatory agencies."

But, Mr. Moses added, "above all they need less whining and crying and more brains and self-reliance." Amen to all of this.

If we may say so, though, some of the railroads need a bit more. The roads that are intent on getting out of the passenger business cannot be induced really to like passengers, we suppose; but they badly need to learn that if they treat passengers as lepers the public disgruntlement will affect them in many other ways. Take an instance that actually happened on a nearby line. The train was an hour and a half late, and a passenger complained politely to the conductor that the only reason he had taken the train was to be on time for an appointment. "Listen, bub," the conductor snarled, "if you want to be on time take the airlines and don't bother me."

Youth Looks at Her True Security

EXTENSION OF REMARKS

HON. HIRAM L. FONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31, 1960

Mr. FONG. Mr. President, recently Miss Kathleen Gomes of Honolulu. Hawaii, won the statewide speechwriting contest sponsored by the junior chamber of commerce. Theme of the contest is "My True Security." Next month, along with other State winners, Miss Gomes will participate in the national finals.

That our youth should take an active interest in current events and give serious thought to their personal as well as national security is heartening indeed—for the future of our great Nation will rest upon today's youth.

There is maturity of thought and great wisdom reflected in Miss Gomes' speech. It would be well, in these troubled times, for the people of the United States, nay the people of the world, to read and consider what she has written.

I ask unanimous consent, Mr. President, that Miss Gomes' winning speech be printed in the Appendix of the Record.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

MY TRUE SECURITY-THE AMERICAN WAY

Can one have true security in an age in Which innovations and new fashions appear almost daily? Do advances in scientific and medical technology, which have done much to strengthen America's standing as one of the leading nations of the world, guarantee security? One reads constantly of open heart surgery being performed successfully in case after case; of polio, once a crippling menace to young and old, being conquered through the astounding discovery of Dr. Salk; of satellites now spinning in orbit around our planet at tremendous speeds. Indeed, the space age just dawning, brings with it golden opportunities for many to gain world prestige and recognition, for surely within our time, man will reach out and step by step conquer other planets—perhaps the entire universe. Does the knowledge of this mad race into space with its inevitable grasping and grabbing give a sense of security? Has not history taught us what havoc was wrought among the powers of the world through the imperialism of the 18th and 19th centuries? Will conflicts over planets be less menacing? I think not.

Quite recently, a well-known bank advertised on a billboard: "There is no security in the world like a good bank account." What must have been the thoughts of the refugees who came to America from the countries of Europe where they had had very good bank balances indeed. They must have thought quite bitterly of this type of security.

In the face of such facts, can one hope for a true sense of security? Again I ask if these modern wonders in such a chaotic world as ours guarantee security to you or to me? Does the prolongation of my life through a successful heart operation bring me a feeling of security when I know that that same life could be snuffed out in a matter of seconds by an H-bomb? Does the thrill of an anticipated trip to Mars compensate for the ever-increasing threat of communism—the terrible fear of awaking some morning to find my home gone; my family dispersed; my church destroyed; my identity lost? How can one, indeed, build a sense of security? In fact, can it be done?

Yes, one can develop a sense of security in spite of all the above mentioned calamities—for true security does not lie outside of oneself, but way down deep within—way down deep where I am assured that I am an individual, different from everyone else; that I have a destiny to fullfill, a role to play that no one else can accomplish—that I am a somebody—therein, lies my true security

And here in America, where communism is still only a threat, I have the opportunity to work and develop myself as I am, and not with the self that other people think I am. And I must make it the very best self that I cm. I must build a strong, spiritual citadel where sound principles, noble feelings, high aspirations, and lively faith rule the inner me. I must practice the tradition of free men—that is I must attempt to advance in wisdom and fortitude; to surmount temporary obstacles with faith and valor; to live the Christian principles of honesty, loyalty, and decency; to take the firm,

united stand against communism; to remain forever loyal to God and my country through the American way of life.

That then, is building security, my security. And if the inner me is strong, if I grow to my full stature, then true security is assured for me and for posterity.

Consequences of the Development of Bigger and Fewer Farms

EXTENSION OF REMARKS

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. MARSHALL. Mr. Speaker, the June issue of the County Agent, Vo-Ag Teacher magazine includes an interesting insight into the so-called farm problem which should concern consumers as well as farmers.

In his Washington Today column, John Harms comments on one of the very real dangers of driving farmers from their farms. Concentration of the production of essential foods and raw materials in the hands of fewer and fewer farmers cannot help but have serious consequences for the consumer. Under unanimous consent, Mr. Speaker, I include Mr. Harms' remarks in the Record:

All the ballyhoo over the accumulation of expensive farm surpluses the past few years, now rising to a new crescendo, has almost completely obscured an even more momentous farm problem with much deeper meaning to the alleged irate consumers. That is the development of bigger and fewer farms, Conceivably this development could have far greater impact on consumers all along the line than the problems of storing abundance.

To date very little public attention has been directed to the trend toward fewer farms as a matter of public concern—and aside from what this trend is doing to the smaller farmer. Yet, over the long pull this could very well turn out to be a much more expensive proposition for consumers as consumers (and not taxpayers) than the surpluses have.

We've heard estimates from highly responsible government and private experts that by the year 1970—or earlier—there will be no more than 500,000 farmers producing most of the food and fiber in this country and getting at least 90 percent of the farm income from sales. As a matter of fact, some well-known prognosticators believe the 1960 census will show that 10 percent of the farmers now produce almost 70 percent of the annual farm sales. (Census results will be published several months from now.)

This is a concentration of power which fairly staggers the imagination. For example, it is considerably easier for a smaller group of enterprisers to band together into bargaining and marketing cooperatives or associations than it is for 4 million farmers to do so. With organization, the next step could very well be farmer control of production—not only to reduce surpluses but to raise prices. This would be in addition to effective bargaining power these farmers might have if they acted in association.

During the current period of development in the food industry, chainstores pretty well call the tune on farm prices, according to some economists. A concentration such as here outlined in the agricultural industry could reverse the current situation. It could eventually mean that farmers would be in a position to pass along costs—and indeed share in the national economic prosperity. This, in turn, would mean first buyers would be paying more for farm produce, and a chain reaction would be set off reaching right out to the ultimate consumer.

Food prices now are at reasonable levels, still city folks are incited to anger over both food prices and surplus costs. Question that comes to mind is whether they would be happier with a public policy dealing with abundance—even though it cost tax dollars—or in paying higher out-of-pocket food prices. Agriculture definitely is drifting in this direction and there is very little on the horizon to indicate a change in direction.

An Open Letter to Nikita Khrushchev

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31, 1960

Mr. MUNDT. Mr. President, the wrecking of the summit conference by Russian Distator Khrushchev has shocked the world. Public opinion in this country—and, I am confident, public opinion throughout the free world—is strongly asserting itself in support of the President.

As demonstration of what I believe is a typical reaction of the American citizen, I wish to call to the attention of my colleagues a most interesting letter of one of my constituents in South Dakota, who addresses his remarks as an "open letter" to Mr. Khrushchev.

I might point out that the author of this letter is not an American by birth, but one of those many millions of citizens who came to this country and adopted it as his homeland.

The author is Peter Legeros, of Brookings, S. Dak, a gentleman whom I am proud to call a dear friend. Mr. Legeros, one of many South Dakotans of Greek ancestry, is a patriotic American of the first order.

His love for this adopted homeland has been demonstrated frequently and is well known to his fellow citizens in Brookings County.

I bring this letter of Peter Legeros to attention, because I believe it is eloquent testimony to the dedication and desire of not only Mr. Legeros, but all Americans, to stand firm and remain free in the face of threats from a tyrannical system such as communism.

Mr. President, I request permission to have the letter of Mr. Legeros, as carried in the May 22 issue of the Brookings Register, Brookings, S. Dak., printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

To the Epiroa:

This is a letter to Mr. Khrushchev.

You are drawing attention at the summit conference by faults—hiding your own, telling the world how good you are and finding fault with everybody else.

Yes, we are all sinners. That's why we came to the summit conference to stop spying and fear and the fighting of hot and cold wars which have continued for the past 20 years because we don't trust one another.

It is needless to repeat how much America has done for peace and how it has helped others. If it weren't for America, perhaps there would be no Russia today. America has sacrificed greatly during the last 40 years for freedom, but today, Mr. Khrushchev, you have the nerve to insult America in public. But as you insult others, you really insult yourself.

We excuse your ignorance. Because you are behind the Iron Curtain you believe

people know nothing about you.

America is made up of the children of all nations and has become the mother to all nations. Every nation in the world has profited from America, where many, many thousands of people have come to find peace and freedom and happiness.

People from many nations have found freedom in the land over which the American flag flies-a flag alone among flags which have the sovereignty of the people. He who lives under it and is loyal to it is loyal to truth and justice everywhere.

PETER LEGEROS.

BROOKINGS.

U-2 and Khrushchev Nonsense

EXTENSION OF REMARKS

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. SMITH of Kansas. Mr. Speaker, much comment has been heard and a great deal written about the recent incident in Paris-most generally labeled "The Summit Conference That Failed." It is well known that the men supposed to ascend to the summit never got off the banks of the lazy flowing Seine through the city of Paris. Recently I received a letter from an attorney, Charles A. Walsh of Concordia, Kans. Mr. Walsh has set forth some very pertinent ideas in regard to this Paris conference. In the letter accompanying this article he says this:

The wild reactions now visible indicate very clearly that Khrushchev's direction to his helpers in this country have already had "Dump Nixon" is again a part of the plan now in operation. Of course, every effort will be made to forestall his nomination, and to get internationalist, Rockefeller, to head the Republican ticket. GOLDWATER is even less acceptable to the appeasers than Nixon. Already the propaganda hounds of the press and radio are baying for Nixon's

It is apparent to me that the political propaganda of the Communist Party is already active in an endeavor to influence both political conventions. Those who are grown up politically, know that the Communist Party works very effectively inside of the Democratic and Republican Parties. It occurred to me in the course of the preparation of the material I am sending, that the leftist elements of the Republicans would try to make another "dump Nixon" attempt. The first intimation to that effort came yesterday when Rockefeller announced that he would accept a draft by the Republican National Convention. Although Nixon seems to have more than enough votes to secure

the nomination on the first ballot, we can be sure that powerful influences are now at work to undermine and destroy him. The internationalists and the Red appeasers cannot forget that he is the man who, more than anyone else, was responsible for the exposure of Alger Hiss. Accordingly, we can expect to see a fight made on Nixon by the same old Nixon dumping crowd.

Already Adlai Stevenson, Paul Butler, Senator Kennedy, Chester Bowles, and Senator Fulbright, all of whom are able to qualify as internationalists, extraordinary, and appeasers plenipotentiary are busy making trouble and intimating that they can qualify in the Roosevelt tradition of Communist ap peasement. This is not a pretty picture, but it is the ugly shape of things as they exist.

Here are Mr. Walsh's observations. I commend them most highly because it proves that citizens of the high plains of mid-America can see the international pitfalls even clearer than international experts who are inclined to look too often through the rose tinted glasses on the one-world aspect:

II-2 AND KHRUSHCHEV NONSENSE

It now seems clear that the U-2 incident which was seized upon by Khrushchev as a cause celebra was in fact only a trifling incident in the world struggle now in progress. The incident was deliberately blown up by Soviet propaganda into a great mountain of evil and wrong on the part of the United States. It was used as a handy instrument to insult the President, humiliate the American people, and kick over the keg of moonshine diplomacy, called the Summit Conference. The whole Khrushchev tantrum at the summit reminds one of the town bully publicly insulting the mayor, setting all the dogs barking, and breaking up the town picnic be-cause the mayor would not apologize for stepping on the cat's tail.

The trifling character of the U-2 incident has been publicly disclosed by Khrushchev himself. Khrushchev knew of the photographic missions of our Air Force over Soviet territory for a long period of time. When he visited the Presidetn at Camp David last fall, he was tempted to speak to Eisenhower about the matter. He disclosed this at his news conference in Paris. He said that he finally decided after considering it, not to bring the matter up. He said that he and the President were on friendly terms, so he decided that the matter could wait. He was then busy practicing the Camp David spirit. He said that the President was addressing him as friend in the Russian language, and that he was returning the salutation in English. Only one conclusion can be drawn from this remarkable acknowledgment, and that is that while Khrushchev was irked and annoyed because our photographic planes were flying over Russian territory almost at will; and he was also further annoyed, because Russian defenses were not equal to the task of bringing them down. However, he then needed to promote a friendly understanding. While Khrushchev was visiting at Camp David, he did not need a peg upon which to hang a series of insults. He had no occasion then to smash the dishes, break the furniture, or blow the house off of the foundation. Instead, he was anxiously endeavoring to bring about a summit conference. He was purring like a Communist kitten in capitalistic sunshine, and hoping that the President could be coaxed into another diplomatic corner.

We must bear in mind that Khrushchev and the First Minister of Britain were, during those months, brusting at the seems, so to speak, organizing another high-hat go, at ersonal diplomacy, with our President and the President of France. In view of all these circumstances and the pattern of other

events, something more than the flight of an Air Force photographic plane over Russian territory is needed to make a sensible appraisal of the Khrushchev reasons for wrecking the conference.

The spirit of Camp David" was touted throughout the world as a new era in the cold war; but the "spirit" lost a great deal of its appeal long before the scheduled meeting at Paris. For some weeks before May 16 there were a great number of symptoms evidencing Soviet displeasure with the prospects of the projected summit meeting. While it is true that the British Prime Minister continued until the last to coze appeasement from all his diplomatic pores; but the German Chancellor, President de Gaulle, and to a lesser extent, our President gave every appearance of standing firm and standing for no further Communist appeare-Khrushchev and his advisers tainly did not like the looks of the situation. They reacted in typical Communist fashion. They incited their stooges and dupes into a general pattern of rioting. The fomented riots in South Africa, Korea, Turkey, and San Francisco. Everywhere the pattern was the same. Students were incited and inflamed against wrongs or supposed wrongs of constituted authority. Khrushchev was show-ing Communist teeth everywhere. Those events were staged for the purpose of letting the people of the world know the capacity of the Kremlin for making trouble.

Then the U-2 incident came upon the The plane came down on Russian territory on May 1; however, it was substantially a week before the incident began to take shape as an important event. It was about 5 days later before Khrushchev even mentioned the incident. It was then seized upon by the Red rulers as a suitable means with which to damn America and the Presi-

dent of the United States.

There are all sorts of speculations concerning Khrushchev's motives for breaking up the conference. Khrushchev himself worked assiduously for months to bring about the meeting which he himself destroyed. was this done? It was done because at one time it suited the Kremlin's purpose to hold the conference and at the time appointed for the meeting, it no longer suited the plans of the Kremlin. Since Khrushchev knew about our photographic planes flying over Russia for some 4 years, the flight of the U-2 over Russia on May 1 was only a pretext for the performance of Khrushchev at Paris in May. Khrushchev is certainly not the person to be howling about spying since tens of thousand of his subjects are pursuing that as a vocation. He might be likened to the man who murdered his parents and then asked for sympathy because he was an orphan.

In view of these considerations, the U-2 incident at most is a trifling matter; and to consider it of special importance, is to take No adult Rusian propaganda at face value. should be fooled by this thing. And no one should be fooled by the breastbeating of Adlai Stevenson and Walter Lippmann. They easily qualify as internationalists and appeasers in the first magnitude.

It is sufficient explanation for Khrushchev's conduct to remember that he needed some sort of an ass to beat, someone to insult, and some pretended outrage to upset the conference. In this connection, the U-2 incident was a convenient diplomatic

windfall which served his purpose.

The rulers of the Kremlin knew that they had nothing to gain by the Paris Conference-A delay was needed and a hope was entertained that the next tenant of the White House will have more inclination to appease ment than its present inhabitant. shchev, in fact, said this at his "press conference." He not only blamed the President, he insulted and abused him in the worst fashion imaginable. Never in the history of the country has our Chief Executive been subjected to insults such as were heaped upon him by the Kremlin boss. Khrushchev also made it clear that he despises the Vice President. A week or 10 days before the Paris Conference, the President mentioned that Vice President Nixon might be asked to sit in at the Conference in case the President was called away. Khrushchev took note of this, and stated that to allow the Vice President to participate in the Conference would be like "sending a goat to take care of the cubbage."

Whatever Khrushchev's attitude toward Eisenhower may have been in Camp David, he decided to throw him out of his diplomatic baggage like he might dispose of a ragged shirt. He made it very clear that he hopes for a later summit meeting, and that the presidential election is a matter of vital concern to him and to the Communist Party.

Among the major purposes Khrushchev achieved in Paris last week was to notify the world and the Communist Party of the United States, in particular, that the new Hitler in Communist demonology is President Eisenhower and the new Himmler is Vice President Nixon. Thus, Khrushchev added two names to the Communist litany of demons. This was his way of taking part in American politics. It was his way of telling the Communist world and the Communist Party of the United States, its fellow travelers, dupes, and fringe adherents, that they are to effect a change in the political climate of the United States. It was his way of telling them that the President is a discard and the Vice President unacceptable. Likewise, it was his way of saying that political talks and summit meetings, must be held on the terms of the Kremlin. It ought to be clear by this time that diplomatic interwith political crocodiles like the Communists, is nonsense. Those who remain addicted to the belief that headhunters and cannibals will give up their first principles if You talk to them in a friendly fashion, are still convinced by their own propaganda.

Khrushchev did a masterful job of telling all and sundry that talks at the summit cannot be resumed until there is a change of political climate in the United States. In effect, he told his stooges here to go to work and elect a respectable President of the United States, who can be invited to confer with Communists. He made it clear that Franklin Roosevelt was acceptable as a U.S. President. By inplication, it was clear to his adherents in the United States, that they must work for the election of a President.

dent who follows the Roosevelt tradition. It is abundantly clear that Khrushchev's hand is in our political pottage; and it will be well for us to keep that in mind. It would also be well, to watch the propaganda and comments of the leftist section of the Dress. You may rest assured that the Kremlin will make no further public statements about the presidential election in the United States. In fact, the Kremlin will deny that it is even interested. That is surely a part of the plan. That will be the best way of furthering the fortunes of Moscow's candidate. Certainly no further public directions to Communist adherents in the United States are necessary. They know what they are expected to do. If future orders from the Kremlin are necessary, they will not be made public.

In connection with this, it will be interesting to see how the Kremlin job is done. This year in America, Walter Lippmann can be counted on to set the pattern. Joseph Alsop, Drew Pearson, and Doris Fleeson may be relied upon to carry the political torch for candidates with liberal leftist orientation.

Those with liberal leftist orientation.

Those who have been the public apologists and supporters of Alger Hiss, William Remington, Owen Lattamore, and Dr. Oppenheimer can be counted upon to make clear by their writings which of the candidates for the presidential nomination are acceptable

to Khrushchev, and which of the nominees can be sure of an invitation to Moscow, and accepted as a participant at another summit conference.

Opportunity

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Across the Editor's Desk," written by Dick Hanson, and published in Successful Farming for June 1960.

There being no objection, the article was ordered to be pritned in the RECORD, as follows:

Across the Editor's Desk (By Dick Hanson)

Years ago, groups of Americans packed up their families and household goods and headed west. These people were the leaders of what a few years later was to become a great movement. Why did these people go into this vast, unmapped wilderness? There were many reasons, but the main attraction was opportunity. Opportunity was there if a man had the foresight and the strong hands to seize it. These people wanted to be independent, masters of their own destinies.

to seize it. These people wanted to be independent, masters of their own destines.
Today, there is another movement of
Americans—but in the opposite direction.
This movement is to the east and the end of
the trail is in Washington, D.C., the seat of
our sprawling Federal Government. One
reason for the movement is the same as it
was for the ploneers—opportunity. But
there the resemblance ends. The opportunity is of a different nature and the strong
hand that seized opportunity in the West
years ago seems now to have been replaced
by many descendants with hands turned
palms up.

It is an amazing and almost frightening experience to visit Washington today. With little effort, you will discover that great numbers of people are there for only one reason—they have a problem and they want the Government to solve it for them. It is just that simple.

I have sat and listened to many groups discuss their particular problems. Too many times these discussions are ended by someone proposing that a representative delegation go to Washington and ask for help. So, the delegation travels east only to discover that the idea of having the Government solve their problem is not a unique one. They immediately run into countless other delegations who are also asking Government to solve their problems.

Somewhere along the line, many people have gotten the idea that Washington holds the answers and that all you have to do is turn over your problems to big Uncle and he'll solve them. Representatives from agriculture are not alone in the belief. All segments of our economy are involved, some far more than others.

Strange as it may seem to some people, our Government did not originate the phrase, "It is more blessed to give than to receive." How often have you heard, "If I don't get my share, someone else will." This is certainly not an attitude that is conducive to solving problems, yet it is the attitude of many individuals and groups of individuals today. They want something for nothing—the prize without the price.

There is an idea that the Federal Government does things with free money—that if Uncle Sam does a job it doesn't cost anything.

Is it old-fashioned or naive to believe that maybe a little more work and a little less running to Washington might solve some of these problems? Admittedly, Government can and should help, but there is a difference between helping and doing the entire job. Government should do those things that we can't do for ourselves, or in cahoots with our neighbors. I have been in countries where the government does make all the important decisions for its people. It was not pleasant.

The trail to Washington gets wider and deeper each day, just as the pioneer trails did with the movement of people West—but again, there is a difference. The pioneers hit the trail expecting hard work, while today too many taking the Washington trail expect to get out of it.

The Medical Care Issue

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to include an editorial which appeared in the Gary Post-Tribune of Thursday, May 19, 1960, entitled "The Medical Care Issue":

THE MEDICAL CARE ISSUE

The tumuit in Washington over medical care for the aged has subsided for the present, and it's become more apparent as to what has been going on. The problem is not so much care of the aged, but who is going to develop a campaign issue, phony or otherwise, in the presidential year.

It was strange how the furor over medical care suddenly boiled up in Washington. At one time we got the impression that everyone over 65 must be participating in a barrage of demands that Congress act. "The old people are on the march," was the word.

What was the fact about this march? Well, apparently that it never took place, and that the flood of entreaties to Capitol Hill was a contrived affair.

Representative Thomas B. Curis, Republican, of Missouri, a member of the House Ways and Means Committee, had a good bit to say about it in the House the other day.

There hadn't been any plans for the committee to consider social security legislation this year, Curtis said. Then COPE, the lobbying arm of the AFL-CIO, decided to make the Forand medical care bill its 1960 issue. COPE had decided to keep hands off the Labor Reform Act, according to Curtis, because Jimmy Hoffa, of the Teamsters, was going to work on it, and COPE needed something else to shout about.

So the barrage of mail on medical care began. But according to CURTES, practically none of it came from older people who presumably were in such great need of aid.

"It consisted almost entirely of mass printed postcards requiring the sender only to add his name and address." Curris said. "Most of the cards were sticker-addressed to the Congressman. An analysis of my mail and the mail of the Congressmen I checked with at random demonstrated that almost all of it was COPE inspired."

After the Forand bill and the Boggs bill, a watered-down alternative, were voted down by the Ways and Means Committee, CURTIS reported, the mail dwindled away to a trickle "and at the present time it is practically nothing."

So much for the march on Washington. It apparently was not a bona fide demand by the aged for action in their behalf.

CURTIS points out why. The most needy aged group-those on relief and not receivsocial security-would have gained nothing from the Forand bill. The second group, persons on social security, are more interested in relaxing the \$1,200 limit on their supplemental earnings. If they can earn more without losing their social security, they don't need Federal aid. For the others who are aged, private health insurance is easily available.
(Insurance statistics show almost half

those over 65 now have some form of private health insurance, with the percentage rap-

idly increasing.)

CURTIS does admit catastrophic health insurance is needed for the aged. But he points out that the Forand bill offers just the reverse; its hospital benefits would stop after the first 60 days.

Unfortunately, the contrived barrage on Congress did have an effect, even after the Forand and Boggs bills were sidetracked. President Eisenhower was induced to let Secretary Arthur Flemimng go to the Capitol with a hastily drafted substitute and the issue is stirring again.

The Forand bill would pay for medical care through social security. It would cost about \$1.1 billion a year and would mean an extra quarter-percent payroll tax on both em-ployees and employers. The twofold administration plan would cost perhaps more, but with States and Federal Government sharing the bill. It is planned more to handle catastrophic illness, but it is a cumbersome affair.

Neither the Forand nor Flemming proposal should be attractive to either the aged or the taxpayers generally. There is a problem to be faced, but these are not good answers. Nor is the answer likely to be found during the welter of partisan debate in a campaign

Manned Bombers Remain Important

EXTENSION OF REMARKS OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES Tuesday, May 31, 1960

Mr. BARTLETT. Mr. President, in the Washington Post for May 29 there was printed an article by Mr. John G. Norris, military affairs reporter for the newspaper. It was entitled, "Don't Write Off Soviet Bombers, Generals Plead." I suggest that all who are interested in the defense of the United States-and that should mean every last one of us-should read that article. Its theme is, of course, in harmony with expressions made before the House Appropriations Committee earlier this year by General White, Chief of Staff of the Air Force, in stating that for a long time to come a principal threat will come from the big Russian manned bomber

Mr. Norris quotes General Kuter, commander in chief of the North American Air Defense Command, as saying:

It is not generally realized that the Soviet bomber force could drop hundreds of megatons of bombs on the United States in 1970 even if they never built another bomber.

Since this is the case, the recent decision of the Air Force to to reduce very significantly the fighter-interceptor strength in Alaska by removing one of the two squadrons becomes even more puzzling-and alarming. It has even been said a Russian bomber fleet, if the decision to attack should be made, would not come over Alaska. Who knows? Has anyone on the other side told us that? This is too great a gamble because it involves not only the security of Alaska, but of all the States to the south. Once in Russian hands, our great Air Force bases in Alaska could be used against the American people with dreadful effect. Obviously, two fighter squadrons were not sufficient to do adequately the job which requires doing in Alaska. Now, with one of the two on the way out, our defense line there has been thinned to the point where it cannot offer effective protection. The withdrawal decision should be reversed, and immediately.

I ask unanimous consent to have Mr. Norris' article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DON'T WRITE OFF SOVIET BOMBERS, GENERALS PLEAD

(By John G. Norris)

President Eisenhower, in justifying American spy flights over Russia, said that they were necessary to prevent "another Pearl Harbor." While agreeing completely on that point, many top military men fear that some other presidentially approved actions may be inviting such a disaster.

Recent talks with officers at the North American Air Defense Command (Norad) in Colorado Springs and elsewhere reveal deep concern over recent major air defense cutbacks and the Nation's failure to push ahead full speed with missile defense and

aerospace detection systems.

They see Russia's manned bomber force as a continuing deadly threat to the United States at least through the 1960's, and they worry over the Pentagon practice of paying for new offensive missiles by canceling longplanned defenses.

BOMBERS AND THE SEVENTIES

"It is not generally realized that the Soviet bomber force could drop hundreds of megatons of bombs on the United States in 1970 even if they never built another bomber." said Gen. Laurence S. Kuter, USAF, commander in chief of Norad.

"Although we expect the bomber threat to become secondary to the missile threat in about 3 years, it still could be fatal and it cannot be ignored because of the ascendancy of a new and still greater threat."

Kuter also terms it "inconceivable" that the United States is not building a defense against ballistic missiles as fast as possible. He said that he "strongly" favors spending the \$137 million which Congress voted last year to get the Army's Nike-Zeus antimissile missile ready for production. The administration has withheld the money, maintaining that Zeus has not yet been proved and is not too promising.

'The side that gets a reasonably effective aerospace defense will gain a tremendous advantage," Kuter added. "It is unthinkable that the Russians should be first. That would automatically make them far stronger and enable the Kremlin to blackmail, possibly dictate to and obviously to attack the West.

The President has repeatedly dismissed as parochial the warnings of generals who speak up publicly against cuts in the programs for which they are responsible. But there is some reason to believe that he as well as Congress may have been overly influenced in this case by the old saw "the best defense is a good offense."

Here are the basic facts about the Soviet manned bomber threat and the greatly cur-

tailed program to meet it:

Russia now has between 130 and 170 long-range Bison and Bear bombers and about 1,100 medium-range Badgers. The Bison is similar to the American B-52 and the Badger to our B-47, while the Bear is a turboprop that is particularly effective at low altitude. Ground-level attacks beneath enemy radar are the chief threat today, and the Bisons and Badgers also can make such 'Braille bomber" strikes.

Khrushchev has said repeatedly that bombers are obsolete and that Russia will replace its warplanes with missiles. But few American military men believe that he will forgo the advantages of a mixed attack system. Many suspect that he is trying mousetrap the United States into dropping its air defense guard, for it is known that Russia has built prototypes of supersonic bombers and could well build them in some quantity.

AGE IS NO FACTOR

At any rate, existing Soviet heavy bombers, like our B-52's are counted on as being an effective weapon into the 1970's, improved by air-to-ground missiles and electronic countermeasures. The Badger, capable of long-range missions by using one bomber to refuel another in the air, should last until the lat 1960's. The Russians have always retained old weapons as long as they were of any use.

A year ago, American air defense chiefs were optimistic that they could handle Soviet bombers if they came under the buildup then being made. Perhaps they talked too confidently to Pentagon chiefs who, faced with the rigid administration budget ceiling, had to take from Peter to pay Paul in meeting the heavy and rising

missile costs.

Air defense leaders still say that they could cope with a Soviet attack today. But because of the cutbacks, they fear what might happen when Russia gains a big ICBM superiority. A followup Russian bomber attack. after a missile strike against Strategic Air Command air and missile bases and air defense centers, might get through to wreck cities and kill millions of Americans.

The several adjustments in air defense announced this year and last add up to a major reduction. First, Norad accepted a curtailment in orders for Century Series supersonic interceptors at the time the 2,000-miles-per-hour, long-range F-108 interceptor was ordered. The F-108's specific mission was to shoot down enemy bombers before they could get within range to fire their Hound Dog-type air-to-ground missiles.

Then the F-108 was canceled and Century Series interceptor orders were further re duced. Radar coverage of the Atlantic and Pacific flanks of the Arctic early warning line was cut, over Kuter's protests. And the original 40-missile-base Bomarc program, planned to back up the F-108's and provide defense in depth over all inhabited areas of North America, has dwindled almost to zero.

BOMARC FIASCO

Five Bomarc A bases are nearly completed along the Atlantic coast. The 400-mile Bomarc B—with double the range of the A and the ability to "look down" and destroy lowlevel attacking planes—has been successfully cut back. The administration now wants to build only 10 Bomarc B bases mounting 30 missiles each, 2 of them in Canada and the remainder protecting a defensive "island" in the Northeastern United States.

Some minor improvements in manned interceptors were proposed by the administration when the latest Bomarc cut was announced in April. Many of the missile sites in the previously planned chain along the Atlantic and Pacific coasts and the Canadian border are now in various stages of construction, representing millions of dollars in Wasted effort.

Then this month, a House committee cut out the entire Bomarc B program. If the Senate goes along, this will leave a huge gap in continental air defenses. Dissatisfaction with the early results of the test program, and what Air Force officials feel is an unjustified belief that the missile will not pan out, contributed to the congressional decision.

The successive Bomarc cuts have had a farreaching impact in Canada, which earlier scrapped a Canadian-designed 2,000-milesper-hour fighter to adopt the American Bomarc. Anti-American feeling there has increased.

Equally important as weapons in modern air defense is a centralized and secure system providing positive command of both missiles and interceptors. In World War II, when antiaircraft gunners and pilots fired at bombers they could see, there were many instances where they mistakenly shot down their own planes.

Today, enemy bomber targets are simply bilps on a radar screen to a pilot or missile crew. Ground commanders in control centers, with the aid of complex computers, can tell which bilps are friendly and which are the enemy. North American air defense now has such control centers, but they are all above ground and would be easy to destroy.

Funds have been voted to build an underground headquarters for Norad in the mountains near Colorado Springs and a \$1 million road has been built to the site, but the money for this nerve center has been withheld. A saboteur with a bazooka could destroy the present headquarters from across the street.

Last month, the Pentagon canceled well-advanced plans to build underground "super SAGE control centers" to replace the existing vulnerable regional centers. The funds were diverted to speed up construction of the ballistic missile early warning system (BMEWS), military satellite development and the building of more offensive missiles.

Reasons given were expected delays in the SAGE electronic brain system and the need to "shift emphasis from the bomber to the more pressing missile threat." But the underlying cause was the administration's ironclad defense budget ceiling, under which a Weapons system with a lower priority must be eliminated whenever funds are needed for something new.

Because there may be a more pressing need for one system than another, however, it doesn't necessarily follow that the latter isn't needed at all. The hardened underground SAGE control centers seem to be essential for many reasons.

With their communications links, they might serve as the Nation's remaining defense and governmental headquarters after an initial nuclear attack in which Washington and alternate control points were destroyed.

They might prevent the chaos that would result it isolated Nike-Hercules batteries and interceptor planes started firing blind at bombers they thought were enemies about to drop hydrogen bombs but which actually were outward-bound SAC bombers.

Further, the underground centers could have housed two other types of admittedly essential control systems—air traffic and space surveillance.

It is admitted by all that a common system for the Federal Aviation Agency and Norad is required both for surveillance and identification of planes entering and traveling over the Nation's airspace and to control the increasing number of faster jet civilian planes that will be flying soon.

Scrapped with the SAGE underground system was a joint FAA-Norad program for

such a control system.

FAA will have to go ahead and finance some sort of substitute system in which the military will participate. Like the abandoned joint system, it will need many additional radars, computers, and communications—probably fewer and less effective than the hardened, fully automatic system that was planned, but which might well in the long run cost as much as the abandoned program.

As for space surveillance, it is conceded by everyone that a complete national system must be established

At present, there are very sketchy, largely uncoordinated and completely unhardened pieces of such a system. Air Force research has a surveillance center in Massachusetts, the Navy has one at Dahlgren, Va., and NASA is building one in Maryland. BMEWS stations, which can see both missiles and satellites, will come under Norad when ready.

An early Government decision to set up such an integrated space surveillance system—with a determination on who is to run it and allocation of funds for the job—seems a vital necessity. Norad officers feel that they are the logical ones to handle such a network, piping in the raw facts by computers to other agencies needing them instantly. At least, someone should be given the role, they say.

the role, they say.

"We feel," said Lt. Gen. Robert M. Lee, deputy commander of the Continental Air Command, "that the dropping of the super SAGE and Norad underground control centers and the accompanying automatic command control systems means that we are destroying the base or paltform for growth for the even more sophisticated command and control systems that will be required in the future."

It may be that the air defense cuts are sound. Both Bomarc-B and the super SAGE centers could not be operational for several years. But it is clear that money was a determining factor in the reductions.

To date, a majority in Congress and among the American people has accepted President Eisenhower's insistence that there must be a fixed limit on military expenditures, and that he and his subordinates know best what dedefense forces are needed. Democrats on the Hill have disputed this, but the administration largely has prevailed.

As a result of the U-2 snafu and collapse of the summit meeting, renewed attacks on the fallibility of administration decisions are expected when the immediate need for national solidarity in the face of Khrushchev's insulting remarks to the President has passed.

Several prevalent policies and attitudes then may come in for an "agonizing reappraisal" both within the administration and in the Congress. One is the widespread belief that because the missile age and space age have opened, it is sound to scrap older weapons—such as air defense—to pay for newer ones.

Another is the place that defensive systems should occupy with respect to offensive ones. There has been a growing feeling among many civilian political leaders that strategic retaliatory forces need only be devised to deter war on the ground that allout war would be so horrible no one would start it.

Military men note that Russian military policy is to maintain balanced power both to deter major war and to win it should the big weapons be launched. Another question expected to be debated is whether the low priority now given many limited war forces should be raised.

Too, military men long have been privately questioning the greatly expanded role of the militarily inexperienced scientist in the life-or-death decisions on weapons systems.

Because of the vast complexity of new weapons and splits over them in the Joint Chiefs of Staff, White House and Pentagon leaders have been relying more and more on the advice of their scientific advisers. Their answers to many of the military questions may be increasingly challenged.

Perhaps the most fundamental question to be reexamined, however, is whether the Nation can afford no more than the present level of defense expenditures—an accepted principle of the present administration which largely has brought about the risks being taken in air defense and many other military programs.

Support Our President

EXTENSION OF REMARKS

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. JACKSON. Mr. Speaker, under leave to revise and extend my remarks in the Record, I wish to include the following editorial from the Santa Monica (Calif.) Outlook of May 20, 1960:

SUPPORT OUR PRESIDENT

As President Eisenhower comes home from the Paris conference that was torpedeed by Premier Khrushchev, all Americans should lay aside party differences to welcome him.

Dwight D. Eisenhower has done more than any man in our time to seek peace with freedom. As the man most responsible for the security of the free world, he went to Paris to propose a practical plan of gradual arms reduction under international supervision, that called for regular checking of the nuclear weapons and armed forces of the major powers, and the final banning of all such weapons.

Our country has made such proposals many times. The Russians have always rejected them. This time, the issue had been so clearly drawn that Mr. K. would have had to "fish or cut bait" in any real talks at Paris.

Also, Mr. K. would have had to back down on Berlin. He is probably under strong pressure from Russian military heads to go through with the Red program of cutting off and communizing West Berlin.

It is transparently clear to the world outside the Iron and Bamboo Curtains that Mr. K. seized on the spy plane incident as a pretext for calling off the summit talks and evading the issues. But his Hitler-like rages and tirades seeking to inflame the Russian people against us, he has unmasked himself and the true aims of the Kremlin.

As regards the intelligence flights over Russia, we should be thankful that they have been carried on for 4 years, for the protection of the free world. Mr. K. will not start a war if he knows we are forewarned by our intelligence reports.

The patient and courageous President whom he insulted and abused returns today to Washington. The Nation should show him that at this time we are not Republicans or Democrats, but united Americans who will uphold human freedom, human honor and decency, against any threats which a power-mad dictator can make.

The Peacemakers

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, May 31, 1960

Mr. WILEY. Mr. President, in a world faced with difficulties and dangers, it is always most welcome to learn of constructive, creative efforts-by individuals dedicated to bettering human life-to create an improved, more peaceful

Today, we are hearing a great deal about Khrushchev, Castro, Mao Tse-tung and other troublemakers and dangers to peace.

Unfortunately, we hear and read less of those individuals around the globe giving of their time, talents, energies to serving-not increasing troubles formankind.

On Sunday, the American Weekly published an informative article entitled "The Peacemakers" by Martin Scott. Reflecting the way in which such individuals, including the distinguished Dr. Schweitzer-in the farflung corners of the earth-are dedicating their lives to serving mankind, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PEACEMAKERS-THEY DON'T MAKE AS MUCH NOISE AS THE TROUBLEMAKERS-BUT THEIR WORK IS MUCH MORE ENDURING

(By Martin Scott)

On this Memorial Day, when we pause in recollection of the men and women who gave their lives for their country, the world divided-as it has been since the first Memorial Day, as indeed it has been since men first had occasion to form themselves into

Yet in recent years it has become increasingly clear that these divisions are not primarily political and national. broader and simpler divisions—s and simpler divisions-so broad, in fact, that to those who see the cobalt bomb and the robot missile presaging the end of man's tenure upon the earth, it is almost as though the prophecies in the Bible are coming true, and that the human race is locked in a final gigantic struggle between good and evil.

This apocalyptic conflict involves, on the one hand, the peacemakers-those selfless men and women who rise above all national considerations to dedicate their lives to serving mankind according to codes of morality and decency that are older than any political system.

On the other side are the troublemakers, who throw up the smoke and fire, the noise and the commotion, thereby attracting the most attention. Peacemakers are content quietly to pursue their humanitarian dreams. Because they are so quiet, we often tend to overlook them.

That is why, on this Memorial Day, as we remember the dead and their deeds, it might be well to remember the living-and to dedicate the day to them as well.

Dr. Albert Schweitzer is perhaps the greatest current symbol of mankind's desire for a better world. Since 1913 he has maintained his hospital in Lambarene, in French Equatorial Africa, ministering to the flesh on one hand and inquiring into the spirit on the other.

To the man who won the Nobel Peace Prize in 1952, all violence is repugnant, including the recent attempt to assassinate Hendrik Frensch Verwoerd, Prime Minister of South Africa, and a prime troublemaker.

It was thinking of this kind that led Schweitzer to call for the ending of all nuclear tests.

When he was criticized for this stand, he answered his critics with his usual calm. Similarly, when physicians from the outside world carped at the sanitary conditions of his hospital, he explained that he "had not wanted to introduce the people to techniques and tools upon which they might learn to depend, and which would be unavailable to them in their own communities.

Similar charges have been leveled by outsiders at other great medical pioneers, including Dr. Tom Dooley, the former Navy doctor whose two tiny hospitals in remote Laos have become modern legends. Dooley knows that the vast majority of his outside critics have no notion whatever of the extent of disease and suffering in the land he has

chosen to serve as a peacemaker.

To the true peacemakers, conveniences and comforts are secondary to the real needs of

the living.

Dr. Bob Pierce, known as the jet-propelled minister, president of World Vision, Inc., of Pasadena, Calif., once put this another way: "There is not a single surgeon in the entire kingdom of Nepal-a nation of about 8 million people. Our problem is to find those people a surgeon. Once he gets there and starts doing the work so urgently needed, we can worry about getting him sanitary conditions to work in.

Dr. Pierce's World Vision makes it possible for people in the United States to support more than 150 Korean orphanages occupied by 14,000 children who otherwise would be hungry and homeless. It supports hospitals, missions, schools, and pharmacies in 24 countries.

Not all the peacemakers have chosen to work in remote areas. In the town of Huy, Belgium, lives Father Georges Pire, winner of the Nobel Prize in 1958, who operates Aid to Displaced Persons, which feeds, clothes, and houses refugees from Eastern Europe who are unable to emigrate to Western Europe because of age, illness, or handicaps.

Ironically enough, with Father Pire and Dr. Schweitzer as his predecessors, Russia's Khrushchev now is reported to be angling for a Nobel Peace Prize. How he has expunged Hungary and the other satellite countries from his conscience is not clear.

Meanwhile, the contrast between Father Pire's gentle and loving methods of handling refugees and those of another man with a refugee problem, the Egyptian Gamal Abdel Nasser, is clear. In many ways, Nasser is doing his best to aid his country-but he must be classified as troublemaker, if only because he will stop at nothing to gain the narrow ends he believes in.

His Western counterpart is the rebel leader. Fidel Castro. Hailed as a hero for his defeat of Dictator Batista, Castro at first appeared as a force for good in Latin America. came the ugly tales of mass executions and reprisals, of the imprisoning of innocent American citizens; and these were followed by intimations of Communist domination in his party.

In another small country not too far from Castro's Cuba, five men willingly gave their lives as peacemakers. These were the members of the Missionary Aviation Fellowship, who tried to carry practical Christianity to the primitive Auca tribe of Ecuadoran Indians-and who were savagely slaughtered.

Their martyrdom was not in vain. Soon after they were killed, two of their widows and the sister of one took up residence among the Aucas. The work they began as peacemakers is going on, near the hole that was dug for their common grave.

The members of this tiny mission would be astounded at the thinking behind the words of Mao Tse-tung, the leader of nearly 600 million Chinese. "A revolution cannot 600 million Chinese. "A revolution cannot be carried out softly, gradually, carefully, considerately, respectfully, politely, plainly, or modestly * * *."

Mao is, in the opinion of many, not merely the foremost troublemaker in the Far East. but the mose dangerous man in the corld.

But near him, too, is a peacemaker. Her ame is Lillian Dickson. The wife of a Caname is Lillian Dickson. nadian Presbyterian minister (although she is an American, born in Minnesota), she continues to minister to the needs of the aborginal peoples who live in the Formosan mountains. They are victims of tuberculosis, leprosy, fevers, plagues, and hideous skin diseases

Until Lil Dickson began her one-woman mission, they had nobody to take care of them. Today they have clinics staffed by doctors. They are being treated; some are being cured. They have the beginnings of a school system. They have begun to learn something of man's capacity for kindness as well as cruelty.

Miles to the south of Seoul, Korea's capital. two brothers are carrying on their tasks as peacemakers. They are Drs. Howard and Samuel Moffett. Educated in the United States, they went back to minister to Korea's physical and spiritual needs. Single-handedly—although he would deny it—Howard Moffett has built a children's hospital in Taegu. Dr. Sam, a missionary in China until the Communists drove him out, returned to Korea after being offered the presidency of one of the largest theological seminaries in the United States.

All over the world-even in Communistdominated countries where they are working underground—the peacemakers are making Memorial Day a day to honor the dedicated living as well as the heroic dead.

A Bill To Amend the Land Laws of the United States by Repealing the So-Called Pittman Act

EXTENSION OF REMARKS

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. BARING. Mr. Speaker, I introduce for proper reference a bill to amend the land laws of the United States by repealing the so-called Pittman Act.

The Pittman Act, passed in 1919, has never served the purpose for which it was intended. Although it was expected that this legislation would induce people to come to Nevada and develop the land and water resources of great unoccupied areas, it has failed to accomplish this goal in any manner. The records of the Bureau of Land Management disclose that in the 40 years of its existence 2,619 applications have been filed. Of these, only 32 were successful in securing patents. One thousand seven hundred and sixty nine have been canceled and 818 are now pending. Most of the entrymen have filed on the maximum allowable under the law, 2,560 acres. The result has been a temporary entry in which areas valuable to the livestock, wildlife, and recreational uses are destroyed or severely damaged and then abandoned.

This legislation has been endorsed by resolutions of the Nevada State Legislature, the Nevada Soil Conservation Districts, the Nevada Cattlemen's Association, and similar organizations having to do with the operations of the public domain. I urge its early consideration and enactment.

Recognition of Red China

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial which appeared in the New York World-Telegram for April 23, 1960, entitled "The Case Against Red China," together with an announcement under date of April 21, 1960, of the appointment of the distinguished Senator from New York, the Honorable Kenneth B. Keating, to the steering committee of the Committee of One Million.

As a member of the Committee of One Million, which is unalterably opposed to the recognition of Red China by the United States as well as its admission to the United Nations, I am much pleased to invite the attention of my colleagues and the American public to the acceptance by Senator Keating of this important assignment.

Senator Keating's penetrating indictment of the Communist regime in China Warrants careful reading by all Americans

There being no objection, the editorial and announcement were ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram and the Sun, Apr. 23, 1960]

THE CASE AGAINST RED CHINA

In joining the steering committee of the bipartisan Committee of One Million (against admission of Communist China to the United Nations), Senator Kennerh B. Keating aptly stated why Red China is unfit to be admitted to the U.N. or recognized by the United States:

"The Chinese Communist regime has had a consistent record of aggression abroad and brutal tyranny at home. Within the past 12 months they have committed acts of massive genocide against the Tibetan people. Within the past weeks they have imprisoned a distinguished American elder churchman, Bishop James Edward Walsh. Within the past days, the leaders of Communist China have once again bitterly attacked and threatened our country.

"With such a record, and no indication of change, it is inconceivable to me how any American can call for the admission of this atheistic aggressor into the U.N. or recognition by our country of one of the greatest tyrannies the world has ever known. To pursue such a course of appeasement would betray our heritage of freedom and, in the long run, would result in strengthening our avowed enemy and weakening ourselves."

Refusal to appease Red China, he declared, is the way to maintain "the position of our allies and friends in Asia and, more impor-

tant, their confidence in the honor and integrity of our country."

That succinctly states the case—and leaves no room for rational rebuttal.

KEATING JOINS LEADERSHIP OF BIPARTISAN ANTI-RED CHINA COMMITTEE — WARNS AGAINST APPEASEMENT OF PEIPING

April 22: Senator Kenneth B. Keating, Republican, of New York, today joined with other Republicans and Democrats in the steering committee of the Committee of One Million (Against the Admission of Communist China to the United Nations). committee is headed by Warren R. Austin, former Senator from Vermont and first U.S. Ambassador to the U.N., and Joseph C. Grew, former U.S. Ambassador to Japan and Under Secretary of State. In addition to Senator Keating, other members of the steering committee are Senator Paul H. Douglas, Democrat. of Illinois; Representatives Walter H. Judd, Republican, of Minnesota, and Francis E. Walter, Democrat, of Pennsylvania; former Democrat Governor of New Jersey and Secretary of the Navy Charles Edison; former Senator H. Alexander Smith, who recently served as special assistant to the Secretary of State.

In accepting membership on the steering committee, Senator Keating said: "I am honored to join in this bipartisan movement which is dedicated to maintaining the security and honor of our country through its stand of refusing to strengthen Chinese Communist tyranny through any steps of appeasement. I am convinced that the overwhelming majority of the American people support our stand of opposition to the admission of Red China to the U.N. and/or recognition of the Peiping regime by our Government. Our present China policy is in the great tradition of bipartisan action. This policy was created and is maintained by both political parties working together.
The membership and support of the Committee of One Million and the numerous resolutions of both Houses of Congress over the past years are demonstration of this This policy has been successful and will continue to be successful in that it maintains the position of our allies and friends in Asia and, more important, their confidence in the honor and integrity of our country.

"The Chinese Communist regime has had a consistent record of aggression abroad and brutal tyranny at home. Within the past 12 months they have committed acts of massive genocide against the Tibetan people. Within the past weeks they have imprisoned a distinguished American elder churchman, Bishop James Edward Walsh. Within the past days, the leaders of Communist China have once again bitterly attacked and threatened our country. With such a record, and no indication of change, it is inconceivable to me how any American can call for the admission of this atheistic aggressor into the U.N. or recognition by our country of one of the greatest tyrannies the world has ever known. To pursue such a course of appease-ment would betray our heritage of freedom and, in the long run, would result in strengthening our avowed enemy and weakening ourselves."

The Committee of One Million, with offices at 343 Lexington Avenue, New York City, was organized in 1953 to "mobilize and articulate American public sentiment against admission of Communist China to the United Nations, recognition of the Pelping regime by the United States, or any other steps which would build the power and prestige of Red China." In 1956 the committee was instrumental in successfully conducting a campaign to include almost identically worded planks in the Republican and Democratic national platforms opposing the admission of Communist China to the U.N. The com-

mittee plans to undertake a similar campaign this year. In addition to such specific campaigns, the committee carries out a nationwide educational and informational program on Communist China and on current trends in United States-China affairs. Its work is supported through public contributions.

Among the members of the Committee of One Million are Senators Styles Bridges, John M. Butler, Robert C. Byrd, Everett M. Dirksen, Thomas J. Dodd, Ralph E. Flanders, Barry Goldwater, Spessard L. Holland, Jacob K. Javits, Mike Mansfield, A.S. Mike Monroney, Karl E. Mundt, James E. Murray, Hugh Scott, Margaret Chase Smith; Bishop Fred Pierce Corson, Mr. Henry R. Luce, Representative Joseph W. Martin, Jr., Adm. Arthur W. Radford, and Gen. James A. Van Fleet. Gen. George C. Marshall was a founding member of the committee and served actively until his recent untimely death.

Fifth World Forestry Congress

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. GAVIN. Mr. Speaker, from August 29 to September 10, the Fifth World Forestry Congress will be held at Seattle, Wash. The theme of the congress is "Multiple Use of Forest Lands"—a concept with worldwide application. As you know, a bill to authorize that our national forests be managed under principles of multiple use will be before the House this week.

In connection with the coming World Forestry Congress, I include a news release issued through the facilities of the U.S. Department of Agriculture:

FORESTERS OF 60 NATIONS TO TOUR THE UNITED STATES

Over 8,000 miles of the American scene will be on parade late this summer when professional foresters from more than 60 nations visit 7 major regions of the United States for a firsthand look at America and her forests, forestry institutions, and forest industries.

The foresters—many of them world famous in their respective fields—will be in this country as delegates to the Fifth World Forestry Congress at Seattle, Wash., August 29—September 10, 1960.

Congress officials have announced that two pre- and five post-congress tours will be available to special groups of the nearly 2,000 foresters attending. A special tour of British Columbia will be offered by Canada. In addition, 6 all-day and 9 half-day tours are scheduled during the 2 weeks the congress is in session to give delegates an opportunity to visit major points of interest within 250 miles of Seattle.

The Fifth World Forestry Congress—the first was held in Rome in 1926—will be the largest international gathering of foresters yet held. It is the first for which the United States has been host and the first to be held in the Western Hemisphere. Preparations for the congress are being made, in collaboration with the Food and Agriculture Organization of the United Nations, by an organizating committee of 44 forestry experts appointed by the Secretary of State with the Chief of USDA's Forest Service, Dr. Richard E. McArdle, chairman.

Many of the delegates will travel halfway around the world to attend, and for many it will be their first visit to the United States. "Because we want our visitors to get a well-rounded picture of our country," said Henry Clepper, tours committee chairman, "we have arranged these tours not only to show a slice of American forestry and forest industry, but a cross section of America itself."

Foresters taking any one of the tours will see a variety of forestry practices and will visit National and State forests and parks, private and industrial forests, forestry educational institutions, forest experiment stations and research centers, and forest products industries.

The tours will be made by bus except for an air trip to Alaska. Travel routes are scheduled through agricultural and woodland areas, and through small towns and large cities so visiting foresters may see Americans living, working, and using their land for many purposes.

One of two precongress tours will cover a large part of New York State and New England. The second will be a 1,200-mile trip from Los Angeles to Seattle through one of America's most interesting and heavily forested regions.

The five postcongress tours will carry visitors from St. Paul to Milwaukee in the Great Lakes region, Memphis to New Orleans in the South, Spokane to Salt Lake City in the Rocky Mountain region, Phoenix to the Grand Canyon in the Southwest, and from Seattle to Sitka in southern Alaska. The Canadian trip offered by the British Columbia Forest Service will include a trip to Vancouver and to several private and public forestry projects.

Short tours during the Congress will include visits to experimental forests, State and private nursery and seed operations, the Seattle watershed, and lumber, plywood, and paper industries in the Seattle area.

Of particular interest to foresters will be a 180-mile trip to Snoqualmie National Forest, administered by the U.S. Department of Agriculture's Forest Service, an outstanding example of multiple use in land management. Visitors to Snoqualmie will see logging roads and active logging operations, patch cutting of Douglas-fir, slash disposal, regeneration by seeding and planting, recreational areas, emergency airstrips, and facilities and equipment for managing and protecting forest resources.

Medical Research Funds

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES
Tuesday, May 31, 1960

Mr. WILLIAMS of New Jersey. President, Federal efforts in medical research have already yielded results of incalculable value to the overall strength of the United States and to the health of its citizens. This year, as we here once again prepare to consider this research effort, we have for our guidance a report by nongovernmental research authorities who have given serious thought to the aims and scope of the Federal program. Dr. Howard A. Rusk, in the May 29 issue of the New York Times, has written an illuminating summary of the consultants' committee report, and the arguments which have been made on this issue in recent months.

Mr. President, Dr. Rusk's article clearly indicates the need for an even greater effort than we have had in the past. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICAL RESEARCH FUNDS—Appraisal of Ex-PERTS' RECOMMENDATION THAT THE FEDERAL OUTLAY BE INCREASED

(By Howard A. Rusk, M.D.)

This week the Senate Appropriations Committee will act on the appropriation for the coming fiscal year for the Department of Labor and for the Department of Health, Education, and Welfare.

The committee now has before it a study in which a group of nongovernmental research authorities have recommended that the administration-proposed appropriation of \$400 million for medical research in the National Institutes of Health be increased to \$664 million.

The 12-member consultants' committee issuing the report was headed by Dr. Boisfeuillet Jones, vice president and administrator of health services at Emory University in Atlanta. Its members were all distinguished authorities in research and health services.

PROPER LEVEL DISPUTED

The consultants' committee was appointed a year ago in an attempt to resolve a controversy between Congress and the administration over the proper level for medical research expenditures. In each of the last several years, Congress has consistently appropriated more funds for medical research than the President has recommended.

In signing the appropriations bill for the Department of Health, Education, and Welfare last August, President Elsenhower publicly expressed concern that Congress had voted more funds than he had requested. He sald, "There is a limit to the rate at which medical research can grow and yet grow soundly."

It has been said that in private he used much stronger language in protesting the congressional action.

In answer to the President, the consultants' committee pointed out that although the level of medical research expenditures of the National Institutes of Health was increased by the Congress from \$294 million in fiscal year 1959 to \$400 million in fiscal year 1960, there still existed a backlog of \$23 million in scientifically approved, but unpaid, application for research grants.

Last January, the President recommended that appropriations for the National Institutes of Health for fiscal year 1961, which begins July 1, be kept at \$400 million. Following the pattern of recent years, the House of Representatives increased the appropriations to \$445 million. The consultants' committee has recommended to the Senate that it further increase the amount to \$664 million.

The committee did not pull this figure out of a hat. Its carefully documented report points out:

- 1. "The present cost of disease and disability to our Nation is estimated as at least \$35 billion a year. Only through medical research and the application of its findings can these losses be reduced."
- 2. The percentage of our gross national product going into Federal medical research has not increased substantially. Of an estimated gross national product of \$500 billion for fiscal year 1960, only \$380 million, or .076 percent, is being spent for Federal medical research.

Compared with \$400 million appropriated this year for medical research to protect Americans against death and disability from disease, the Government will spend approximately 100 times that amount to protect us

against death and disability from possible military attack.

The failure of the summit meeting and the comments in President Eisenhower's nationwide television report Wednesday evening indicated that the latter amount would not be decreased in the future.

Nor does \$400 million or even \$664 million for medical research seem excessive when compared with the more than \$300 million we spend each year for chewing gum or greeting cards the more than \$6 billion spent for tobacco products and the more than \$10 billion that goes for alcoholic beverages.

SHARP DISAGREEMENT

The group also disagreed sharply with the administration's argument that a substantial expansion in research would result in diversion of physicians needed for teaching and clinical care of patients.

It termed this fear unjustified and pointed out that the percentage of physicians participating in teaching and research has risen from 2 percent in 1940 to 3 percent in 1959.

During this period Federal support of medical research has increased 16 times.

The committee noted that physicians and dentists made up about half the professional personnel in medical research, and that this percentage was declining as our national supply of nonphysicians with doctoral degrees in the physical and life sciences increases.

The issue would seem to be one of dollars versus lives. Experience, however, has shown that Federal investments in medical research pay rich dividends in both lives and dollars.

Your Money's Worth, by Sylvia Porter

EXTENSION OF REMARKS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in Sunday's Washington Star by Miss Porter, which illustrates the growing concern among intelligent journalists with the threat to cuts in our mutual security program:

[From the Washington Sunday Star, May 29, 1960]

How You Can Help Now (By Sylvia Porter)

Since the summit collapse, surely many Americans have wondered "What can I do to help now?"

One thing you can do is to make clear to Congress that you want no backtracking on our mutual security program.

If Congress does vote these funds quickly and decisively, it will tell our allies that in this key area of our foreign policy, we have a firm course and we're following it.

It will assure underdeveloped and uncommitted nations that we recognize how desperate is their struggle for advancement and that we intend to continue to help them achieve higher living standards without sacrificing their independence.

BEST NEXT STEP

It will bring home to Russia the message that we know she is fighting an intensifying economic war with us all over the globe and that we are ready and prepared to fight back.

It will support our critical alliances in the North Atlantic and Asia, help maintain the unity which is imperative for survival.

It will be the best next step we could take after Paris—one big step forward after the dismaying series of steps backward.

The mutual security program, authorizing the spending of \$4 billion for foreign economic and military aid in the year starting July 1, on our law books. But, as I emphasized on Thursday, the authorization is meaningless unless Congress also appropriates the money to back up the authorization. Before the summit, influential Members of Congress were saying plainly that they planned to slash the appropriation 25 percent or more under the \$4 billion authorized.

And while President Eisenhower in a Private letter sent to around 100 top citizens of the country has just urged "a crusade" to prevent this, and while this past Monday Vice President Nixon made the unusual move of publicly asking each GOP member of the House Appropriations Committee to prevent it, it is far from sure the pleas will be heeded.

Why is the opposition so strong?

One reason is the admitted maladministration of the program in many instances. Some of the bungling has been abominable.

But the way to correct maladministration of a law is not to cripple the law to be ad-The commonsense move is to get the machinery into operation, then to act with determination to make the machinery more efficient and put more efficient men in control.

POLITICS CHARGED

A second argument against the law is that, if we can't "afford" to spend millions to aid such depressed areas of our own as West Virginia, we can't "afford" to spend billions to aid foreign areas.

This argument is cockeyed and loaded with obvious politics. We do not further aid to our depressed areas by cutting foreign aid and this is definitely no time to be playing politics with our foreign policy.

A third reason is the feeling of disenchantment with the results of the program, the belief that foreign aid is not being adjusted to today's world.

Here again, it seems to me that the way to find a new program is not to sabotage the only one we have.

Imperfect as the foreign aid program is, it is at the heart of our foreign policy. You can help your country by making your support known now.

Radio Address by Hon. Alexander Wiley, of Wisconsin, Over Station WGN, Chicago

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, May 31, 1960

Mr. WILEY. Mr. President, in the aftermath of the Paris meeting, the World is now trying to find ways and means to promote real peace—ways, perhaps, that cannot be torpedoed by the antipeace tactics of a single participant, for example, in a conference.

As we recognize, the furor over the U-2 flight by Mr. Khrushchev was deliberately overplayed and utilized by Mr. Khrushchev as an excuse for blowing up the conference.

Although this propaganda balloon has just about become deflated, the free world must be careful not to allow this "side show scene" by Mr. Khrushchev to serve as a coverup, diversionary tactic for troublemaking elsewhere in the

Today, there are a great many danger points-including Western Europe, the Middle East, Korea, Indonesia, Taiwanthreatened one way or another by com-

While the world spotlight has been focused on Paris, and now on the United Nations, we can be sure that the Communists are not asleep elsewhere. Instead, they are continuing to carry on their subversive propaganda, espionage, sabotage and other activities, according to their master plan of world domination.

Recently, I was privileged to comment over radio station WGN, Chicago, on "fronts" elsewhere in the world where we need to be alert, as well as to strengthen our policies.

I ask unanimous consent to have excerpts of the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WILEY WARNS AGAINST COMMUNIST DIVER-SIONARY TACTICS OVER U-2 FLIGHT TO START TROUBLE ELSEWHERE IN THE WORLD

(Excerpts of address prepared for delivery by Schator Alexander Wiley, Republican, of Wisconsin, senior Republican, Senate Foreign Relations Committee, over radio station WGN, Chicago)

The world today is experiencing crosswinds of differing national policy, cultural, economic, and ideological systems.

In a complex age, we, the people of the United States, must attempt not only to find our way, but also to act as a leader in promoting peace and stability on the globe.

As we are well aware, the new Communist "hard line"-demonstrated by Khrushchev at Paris, and Gromyko at the United Nations has increased tensions and fears of war in the world.

As President Eisenhower stated upon his homecoming, "We can be watchful for more irritations, possibly other incidents that can be more than annoying-sometimes creating real problems."

However, the "hot air" is just about gone from the propaganda balloon floated over the U-2 flight by the Soviet Union.

The hullabaloo at Paris and at the U.N.,

of course, is just part and parcel of the overall Communist master plan for global troublemaking and carrying out its aims of world domination.

However, the Communists-you can bet your boots-are not focusing entirely on the U-2 incident. From past experience, we can expect that they are busy as beehives in other countries around the world with espionage, subversion, spying, and other nefarious activities.

Particularly, Communist aggression by propaganda continues to violate-in spirit, as as in letter-a climate of peace in which nations deserve the right to live together on the globe and seek self-determined

Consequently, we must not be diverted by Mr. Khrushchev's attempt to make a mountain out of a molehill on the U-2 flight, and thus divert, to a large degree, the attention of the world. Instead, we must be alert to the fact that communism is "on the go" elsewhere around the globe.

REVIEW OF GLOBAL CHALLENGE

Briefly, now, let's take a quick look at the upcoming challenges and review all possible free world efforts to cope with them. The topics will include: "The Status of NATO"; "Coping With Special Economic Problems Among European Countries, Including the So-Called Inner Six and Outer Seven": "Further Improving Inter-American Relations"; "Outlook for Reduction of Armaments": "U.S. Attitude Toward the Newly

Emerging Nations"; and "Other Aspects of the International Scene.'

COMMUNIST "TOUGH LINE" STRENGTHENS NATO First of all, let's' take a look at NATO.

Fortunately, the revival of Mr. Khru-shchev's "tough line" at Paris—although a threat to peace—had the positive effect of strengthening the compact of NATO nations.

The task now is to assure that this "closing in the face of danger-is accomranks" plished not just in word, but in reality.

What needs to be done?

Among the tasks to be accomplished are the following:

1. More strongly welding together the NATO nations in the face of danger through improved channels for multilateral consultations on challenges confronting NATO:

2. Equipping this "free world shield" with the most modern weapons system necessary as a deterrent to aggression;

3. Promoting greater "identity of interests" in cultural and social—as well as economic, military, and political fields; and

4. Finally, keeping the respective govern-ments and their peoples alert to the reality that the struggle against communism will be a long-range-not a short-range battle.

SPECIAL ECONOMIC PROBLEMS OF INNER SIX AND OUTER SEVEN

Within NATO, there are, of course, special economic problems. These relate to the trade, tariff, and other problems arising out of the development of the European Eco-nomic Community (the so-called Inner Six) and the signatory countries of the European Free Trade Area Convention (the Outer Seven)

At this time, the governments of these nations are assembling detailed, factual information relating to problems, as well as their possible solution.

Generally, the United States has supported the development of the European Community of nations, both for political and economic reasons.

However, we have also encouraged them to adopt liberal, low-tariff policies toward the United States and other nonmember nations. We do not, in effect, want discrimination against U.S. goods.

Overall, however, the creating of strong Western, free economic and political blocs, we feel, will help to counterbalance the monolithic Communist bloc-directed by, and controlled from, Moscow-aimed at solidifying economic, political, military, social, and cultural interests of Eastern European na-

OUTLOOK FOR REDUCTION OF WORLD ARMAMENTS

Now, turning to another international problem: What is the outlook for realistic, safeguarded agreements for reducing arma-

As I understand it, the Communists are still willing to proceed with the 10-nation

meeting at Geneva, Switzerland.

In the light of Mr. Khrushchev's belligerence at Paris, however, there is serious doubt as to whether good faith agreements-safeguarded, of course-can be obtained at all.

In practice, we find that the Communists give lip service to the cause, yet ceaselessly attempt to blockade every effort to reach any realistic agreements.

The purpose of reduction of armaments, of course, would be:

1. To lessen the possibility of a nuclearmissile war that would destroy vast portions of the earth;

2. To reduce nuclear testing threatens to further contaminate the air with a dangerous degree of radioactivity; and

3. The world suffers from the need for turning these vast manpower, brainpower, and national resources now going into armaments, to production of the good things of life to provide better standards of living, eliminate poverty, starvation, illiteracy, and other humanitarian purposes.

Significantly, however, Mr. Khrushchev, in a speech delivered shortly after his visit to the United States, said:

"We must fight resolutely and consistenly for our ideas, for our way of life, for our socialist system. * * We consider that this struggle should be economic, political, and ideological, but not a military one."

Consequently, the Soviets continue to attempt to pursue their goals through diplomacy, trade, economic aid, and international subversion.

As yet, however, it is not possible to assess what the new hard line displayed by Mr. Khrushchev at Paris will mean in terms of efforts at "missile-power politics" or blackmail threats. In essence, however, the primary objective still remains—for the Communists, at least—as formulated by Lenin many years ago: "Who will vanquish whom?"

In coping with the Communist challenge, a major task—and that of our allies—is to maintain sufficient military strength to deter the Communist bloc from moving the Communist-freedom struggle into the military arena; or even successfully employing threats of military force.

Second only to this, however, we must preserve and strengthen our economic and, in cooperation with our allies, our international economic position. A strong economy is the keystone to our own strength and our ability to play our necessary role in world affairs.

Recognizing that peace must be established around the conference table—not on the battlefield—we must of course continue diligently, relentlessly, and in a dedicated way, to find a reasonable solution to East-West differences.

If we had our way, we would like to beat our swords into plowshares, to channel great resources, skill, and human ingenuity of our country and the world into farm machinery, hospitals, homes, schools, roads, food for the hungry, books and teachers for the millions in the world who cannot read or write; more electric and atomic power for factories, homes, and farms, and other goods of peace.

IMPROVING UNITED STATES-LATIN AMERICAN

In further reviewing our relations with other countries of the world, we cannot—and must not—ignore the need for continued efforts to improve contacts with the friendly

countries of Latin America.

Currently, the Communists are attempting to make inroads into the Western Hemisphere through trade routes; cultural exchanges; planting Communist troublemakers to capitalize upon economic difficulties confronting these nations; and other devious tactics.

Now, what steps can be taken to further improve inter-American relations?

These include, I believe, the following:

A greater effort to provide technical and administrative assistance to needy areas now striving for greater development and progress:

Encouraging stability to attract more U.S. private investments in these countries—where there is an ever-growing need for development and improvements.

Encouraging private business engaged in commerce, trade, manufacturing, mining, or other fields, to carry on more enlightened public relations programs among private citizens of Latin America:

And finally, continue to explore, better utilize, and, as appropriate, increase support for, international lending institutions, regional proposals for common markets, and other measures designed to help solve the economic problems throughout the hemisphere.

BOLE OF NEWLY EMERGING NATIONS IN WORLD
APPAIRS

Now, turning to a new aspect of international relations: Let's take a hard look at U.S. policy relating to the newly-emerging nations of the world.

Today, the globe is in ferment—politically, economically, socially, and spiritually.

In Africa and Asia particularly, nations

In Africa and Asia particularly, nations and peoples are striving for independence and for a right to seek, under self-determined forms of government, their destinies,

Why are these newly emerging nations significant? For this reason: Representing hundreds of millions of people and vast land and natural resources, these nations—if war can be averted—may contribute to determining the "balance of power" in the world for the years ahead.

As a leader, the United States, I believe,

As a leader, the United States, I believe, must play a significant role in assisting and, as possible, guiding these nations to their appropriate role in world affairs. The ob-

jectives of such efforts include:

1. Recognizing the inherent rights of people and nations to attain a self-deter-

mined destiny;

2. Eliminating breeding places of unrest and instability which nations—"under the thumb" of other countries—will continue to be; as well, such dominated courties—literally seething for independence, are major targets also for Communist activity; and

3. The millions of people and their resources, if developed fully, can make a contribution toward world betterment.

Consequently, an enlightened policy toward these newly emerging nations actually is not only humanitarian, but in our own self-interest, as well as essential for the peace and security of the world for the future.

CONCLUSION

This, then, is a brief look at the world scene.

In times past, the needs for you and me as citizens in the hinterlands of America to be concerned with these global challenges—would have been seriously questioned.

Today, however, what happens in Paris, at the United Nations—yes, at such far-off places as Indonesia, India, China and elsewhere—affects our security, taxes, the economy of our country, the outlook for our future.

As citizens of a leading nation in the world, therefore, you and I have a special responsibility, not only for being informed on, but also for attempting to constructively deal with, challenges in our local communities, of a national scope, and on the world scene.

Now, I want to express my appreciation to you for giving me this opportunity to discuss these national and international problems and challenges with you.

Payment-in-Kind Program Proves To Be Popular

EXTENSION OF REMARKS

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. HOEVEN. Mr. Speaker, on February 25, 1980, I introduced H.R. 10672, to provide for a payment-in-kind program for corn. This bill would reduce corn surpluses, decrease storage costs, and improve farm income. The bill, among other things, sets up a 3-year payment-in-kind program for corn farmers who voluntarily take their corn acreage out of production.

Public sentiment throughout the country is heavily in favor of this type of a

payment-in-kind program. It is contended by many students of agriculture and dirt farmers that such a program is the only real solution to the surplus problem. The Lee Vogel radio broadcasts over NBC, Chicago, have given wide publicity to the proposal, and there has been a most favorable response. On May 3, 1960, Mr. Lee Vogel told his radio listening audience that the best solution to the farm problem would be to retire land from production and pay the farmer from Government surplus stocks for the retired acreage. Following this 1 broadcast, Mr. Vogel received 242 communications from interested listeners in several Midwestern States, all of whom stated they were in full accord with the payment-in-kind program. The list of those who responded to the broadcast is as follows:

On a radio broadcast, on the Lee Vogel program, NBC, on May 3, 1960, on which the people were told the best solution to the farm problem would be to retire land from production and pay the farmer from Government surplus stock, for the retired acreage; this list of names, as follows, will indicate 100-percent approval of this plan:

Lillian Ellingson, Nakomis, Ill.; Peter Schmitt, Milwaukee, Wis.; E. Hendricks, Chicago, Ill.; Richard K. Dompke, Chicago, Ill.; G. Kettering, Rock Island, Ill.; W. W. Hardy, Hindsdale, Ill.; Edward Anyerman, Duluth, Wis.; Harry Christensen, Chicago, Ill.; Bernard Kruse, Chicago, Ill.; C. Hobbs, Chicago, Ill.; Milliam H. Koch, Milwaukee, Wis.; William Irish, Peoria, Ill.; Rev. Peter Sankey, Chicago, Ill.; M. Service Unification: Communications

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. CURTIS of Missouri. Mr. Speaker, during the House debate on May 5 on the military appropriations bill I commended the committee which had studied this measure for its efforts to bring about the integration of the Department of Defense communications system in line with the provisions of the amendment to the Reorganization Act of 1958 which I sponsored along with the distinguished gentleman from Massachusetts [Mr. McCormack]. This amendment is designed to foster economy in the Defense Department by bringing about integration of the various service functions common to all of the military: this integration of the communications system, as was pointed out at the time of the debate, permitted an \$84.3 million cut in the costs of operating and maintaining the Department of Defense communications system.

The efforts of the committee and of the many others interested in this question of saving money in our defense establishment have met with success in this case. The announcement, as it appeared in the New York Times of May 13 follows:

MESSAGE CONTROL UNIFIED BY GATES—A COM-MUNICATIONS NETWORK FOR ALL SERVICES WILL BE UNDER JOINT CHIEFS

Washington, May 12.—Secretary Thomas S. Gates, Jr., today ordered all long-distance communications services of the Defense Department pulled into a single communications agency under the Joint Chiefs of Staff.

The order was regarded as a major step in the Defense Secretary's effort to achieve unification at the Pentagon. The military services have jealously guarded their communications controls as important aspects of command responsibility. Under the new Gates orders, outlined in two directives, the Joint Chiefs will for the first time have a day-to-day operations responsibility.

The Chiefs were originally devised as a planning and consultative body. In the past, arguments against unification have revolved around the idea that it would be wrong to permit centralized operations under the Chiefs.

Secretary Gates is understood to have overcome some of the objections of the services, particularly those of the Navy, over which he once presided as Secretary, by excluding local and self-contained tactical communications from the latest unification orders.

Despite this and other exclusions, the combined communications net will encompass 79 major relay stations throughout the world, representing a plant investment of \$2 billion.

The announcement said that it would take 9 months to effect the reorganization. The orders authorized the creation of a defense communications system to be headed by a military officer of flag or general's rank.

Effect on Jobs in the United States of Rubber Footwear Imports

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I include some very enlightening figures on rubber footwear imports which have been submitted to me by the Converse Rubber Co. of Malden, Mass.:

EFFECT ON JOBS IN THE UNITED STATES OF RUBBER FOOTWEAR IMPORTS

The number of pairs of rubber footwear produced annually per man was estimated in the "Census of Manufacturers," Department of Commerce's report on the rubber footwear industry in 1958 at 5,500 pairs per man. Whether this figure was or is completely accurate is not known. Assuming that anywhere from 4,000 to 5,000 or 5,500 pairs of rubber footwear are now being produced annually per man in the industry the following alarming facts are disclosed as a result of rubber footwear imports in 1959:

In 1959 imports totaled 52,880,000 pairs.

On the basis of annual production of 4,000 pairs of shoes per worker such imports replaced 13,000 full-year jobs in the United States in 1959.

On the basis of annual production of 5,000 pairs of shoes per worker such imports replaced 10,500 full-year jobs in the United States in 1959.

On the basis of annual production of 5,500 pairs of shoes per worker such imports replaced 9,600 full-year jobs in the United States in 1959.

Even more alarming facts are disclosed as a result of rubber footwear imports in the first quarter of 1960.

In 1960 first quarter imports totaled 30,-379,000 pairs.

On the basis of annual production of 4,000 pairs of shoes per worker such imports in the first quarter alone replaced 7,500 full-year jobs in the United States in 1960.

On the basis of annual production of 5,000 pairs of shoes per worker such imports in the first quarter alone replaced 6,000 full-year jobs in the United States in 1960.

On the basis of annual production of 5,500 pairs of shoes per worker such imports re-

placed 5,500 full-year jobs in the United States in 1960.

In 1960 full-year imports of 121,500,000 pairs projected on basis of first quarter imports of 30,379,000 pairs.

On the basis of annual production of 4,000 pairs of shoes per worker such imports will replace 30,000 full-year jobs in the United States in 1960.

On the basis of annual production of 5,000 pairs of shoes per worker such imports will replace 24,000 full-year jobs in the United States in 1960.

On the basis of annual production of 5,500 pairs of shoes per worker such imports will replace 22,000 full-year jobs in the United States in 1960. Note.—(1) The 1958 Census of Manufac-

turers reported 17,596 production workers in this industry. Thus 1960 imports could replace all production workers in the industry.

Note .- (2) The reliability of using first quarter imports of rubber footwear to forecast full-year imports is indicated by the actual experience of imports in 1959. While imports of rubber footwear in the first quarter of 1959 showed an increase of 132 percent over imports in the same period in 1958, full-year imports of rubber footwear in 1959 showed an increase over full-year imports in 1958 of 172 percent.

Expansion of Community "Do-It-Yourself" Programs To Promote Economic Progress

EXTENSION OF REMARKS OF

HON, ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31, 1960

Mr. WILEY. Mr. President, in a world of promise, danger, and challenge, we recognize that Uncle Sam-responsible for national defense as well as a wide variety of domestic national-scope programs-is shouldering a terrific burden.

Consequent, I believe the Nation, and our people, could benefit from a greater "do-it-yourself" community effort for dealing with economic problems of a

local nature.

I am well aware, of course, that it is far more popular to say to the home folks: "If you have a need for utilities, roads, and other projects-go to Uncle Sam for the money." With the load being carried by the Federal Government, however, I believe there is serious question as to whether any more hands should be reaching for Uncle Sam's pockets. To the contrary, I believe a great many communities could examine their manpower, resources, and other potentials to determine whether or not by "do-it-yourself" community efforts, progress could be made toward strengthening the local economy.

Having commented on this recently in a broadcast over Wisconsin radio stations, I ask unanimous consent to have excerpts of my remarks printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WILEY URGES DO-IT-YOURSELF PROGRAMS FOR COMMUNITY PROGRESS; URGES EXPANSION OF TOURIST TRADE TO IMPROVE ECONOMY IN WISCONSIN

(Excerpts of address prepared for delivery by Senator ALEXANDER WILEY, Republican, Chippewa Falls, over Wisconsin radio stations)

Friends, I welcome the opportunity to chat with you once again on major problems confronting us as a State and a Nation.

Today we are living in a world of danger, promise, and of challenge.

The "switch" in Communist policy to the old, Stalinist "hard line" of threat, bombast, propaganda, will have a serious impact not only on world affairs but on life right here in Wisconsin. As yet, however, it's not possible to assess the drastic change in Soviet policy.

Nevertheless, the major tasks before us continue to be (1) carrying on-in the face of the noncooperative Communist attitudeefforts to promote peace and prevent a third world war, and (2) maintaining a sound economy at home. At this time, I'd like to discuss with you

prospects for meeting the second challengethat is, further strengthening the economy.

In considering such efforts, a question of-ten automatically evolves; that is, "Well, what is Uncle Sam going to do about it?"

However, there is an alternative questionstriking close to home—that is, what can we, as citizens, do about it, to provide a sounder, more effective, stronger economy right here in Wisconsin?

NEEDED: COMMUNITY DO-IT-YOURSELF PROGRAMS

Now how can this be accomplished? Frankly, I would like to see more do-ityourself community programs for dealing

with economic problems of a local nature. I recognize, of course, that it is far more popular to say: "If you have a need-for utilities, schools, roads, or other projectsgo to Uncle Sam for a grant."

With the tremendous burden already on the Federal Government-particularly for defense-there is serious question as to whether there should be any more grabbing hands reaching for Uncle Sam's pocket.

Consequently, communities—large and small—I believe could well conduct a real stock taking to possibly unveil new local resources and potentials which, if better utilized, would help bolster the economy. Now, how can we go about accomplishing this objective? Such a program, I believe could well include the following steps:

- 1. Establishing a do-it-yourself development committee for the community.
- 2. Undertaking a complete review of manpower, natural, financial, and other resources.
- 3. Conduct a study on the needs of a community for services, products, transportation. housing, as well as the potential within the community for meeting its own needs.

In addition, we need to:

- 4. Review local tax systems and public utilities services to encourage industrial and business development.
- 5. Stimulate interest of local citizens to invest in local projects.
- 6. Assess improvements necessary in retail and service business, as well as to plan for and provide adequate schools, playgrounds, recreational facilities, transportation, police and fire protection and other services.
- 7. Obtain available State and/or Federal assistance on special technical problems, such as community planning, industrial zoning, and planned industrial districts.
- 8. And, finally, we must stimulate citizens' interest in making their community a better place in which to live.

EXPANDING "TOURISM" IN WISCONSIN

In recent years, also, a new industryand economic opportunity—has emerged, that is, "tourism."

Today, tourism is one of the fastest developing businesses in the United States. Annually, tourists in this country spend between \$15 and \$20 billion.

As of now, tourism is Wisconsin's third largest industry. However, I believe we can cut, for our Badger State, an even larger slice of this economic pie.

To attract tourists, a community-say the experts-does not need gold-plated hotels, multimillion dollar airports, or Grand Canvons.

In a complex, sometimes hectic age, a great many people on vacation try to find a place where they can get away from it all-to find comfort, change, amusement, pleasant environment, food and accommodations at reasonable prices, to experience a rejuvenationphysically, mentally, spiritually.

WISCONSIN-A TOPNOTCH VACATION LAND

As you and I know, friends, Wisconsin, a topnotch vacation land, offers a wonderland of such opportunity.

About 8.676 lakes and 10.000 miles of

streams for excellent fishing.

Seven State forests and three State parks. providing a great many wonderful opportunities for sightseeing, boating, camping out of doors, and traveling through our scenic countrysides.

Over 161 museums and many other his-

torical sites and places of interest.

In 1958, over 6 million travelers visited the State park and forest areas of our State.

The opening of the St. Lawrence Seaway also promises an influx of more and more visitors to Wisconsin and the Great Lakes region, from Canada and all over the other parts of the world, as well as from many other States of the Union.

The challenge is for each of the communittes—with tourist potential—to transform itself into a haven for vacationers, then effectively tell its story. How? By publicizing: What your community is; how does a vacationer get there; what are its special activities; and other highlights to lure the

The promotion of tourist trade can bring benefits not only for today-but for the future. Nationally, our people face the prospects of shorter workweeks, better pay, faster transportation to everywhere—all of these factors indicate that the future of the tourist business is wide open. For 1960, the tourist season is just ahead.

Our job, then, is not only to cash in on the benefits; but to provide more people of America and the world-in addition to the million who now visit us-to see, and enjoy, the hospitality, and friendly, scenic environment of Wisconsin.

FEDERAL ASSISTANCE FOR "BOOTSTRAP" OPERATIONS

Now, I well recognize that a local community may not be able ot successfully carry out by itself a do-it-yourself development program for expanding tourism, industrial development, and other goals. To help make such improvements, there are Federal programs, for example, available, including the following:

The Department of Agriculture provides technical assistance and consultation through Federal extension, forest, and soil conservation services, as well as financial assistance from such agencies as the Farm Home Administration, REA, and other pro-

The Department of Commerce is carrying on a splendid program of technical assistance and consultation for industrial development as well as other projects for improving the economy.

The Housing and Home Finance Agency also has a variety of programs that can be helpful to communities—both small and large—attempting rehabilitation programs. These include guidance and, in some cases, Anancial assistance under the Community Facilities Administration, FHA, Urban Renewal, and other such agencies.

In addition, the Small Business Administration offers technical guidance, administrative advice, as well as loans to local businesses in a community.

For the most part, these are not new programs. However, they can be of tremendous help to a community in carrying on a "bootstraps" operation to promote progress and improve the economy.

CONCLUSION

As we look to the future, then we recognize that the economy of each local com-munity will continue to be closely integrated With that of the State and Nation, In this cooperative complex, however, the local community must stand ready-willing-and-as

it is able-to bear its fair share of the burden. Similarly, it can expect to reap a proportionate share of the rewards.

Again, I want to express my sincere appreciation for the opportunity to discuss these problems of mutual interest with you. Thank you very much for listening.

Memorial Day Services, Altoona, Pa., May 30, 1960

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. VAN ZANDT. Mr. Speaker, under the auspices of the War Veterans Council the annual Memorial Day observance was held at Altoona, Pa., Monday, May 30. The program included a parade through the downtown business district terminating in the Fairview Cemetery where I was privileged to deliver the following address as part of the memorial services:

MEMORIAL DAY ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT OF THE 20TH DISTRICT OF PENNSYLVANIA AT THE FAIRVIEW CEME-TERY, ALTOONA, PA.

Memorial Day is distinctly an American institution.

It is a deeply significant, sentimental custom established by our people more than 90 years ago.

It is not only observed in every community across our Nation, but in many foreign lands and upon the high seas.

This special day is the brief moment we set aside from our busy lives to pause before the resting places of our departed loved ones—to remember them and to eulogize the honored dead.

When we have concluded our short ceremonies here and turn back to our daily tasks we shall leave with the dead our tributes, expressed in words and with flowers.

But of even greater importance is the fact that we will have gained new spiritual and mental enlightenment through this experience.

Memorial Day is not a day for sadness.

In fact, when we consider all of its facets we find that Memorial Day has great beauty and that it has truly inspiring depths.

There are the colors of our flag and flowers

for the eve to admire.

There are the carefully chosen words of prose, poetry, song, and prayer for the ear to

All of these, together, touch our hearts and minds and our conscience.

They reawaken in us a new realization that we are influenced, in large measure, by those who have gone before us, and by their contributions to our lives.

It does not matter who we are, nor the differences between our religious thinking or racial stock.

The principles presented by this Memorial Day are the same to each of us-because we are all Americans.

Following the same line of thought when we honor the dead we do not weigh the stations they held in life.

It does not matter whether they were rich or poor, young or old, or whether they were intellectuals, craftsmen, students, or laborers.

As the poet John Ingalls expressed it-"In the democracy of the dead, all men at last are equal"-there is neither rank nor station nor prerogative in the republic of the grave.

Now it may be a little difficult for us who are gathered here to realize that we are part vast, worldwide commemorative service on this special day.

We are but a small portion of the living-

who are honoring the dead.

And those souls to whom we are directing our immediate attention are but a very few of the total number of American honored dead around the world.

What we are doing here is actually symbolic.

Our contribution to the overall Memorial Day observance is being duplicated by millions of other people throughout our land and in several foreign countries.

To make that point clear let us consider the following facts:

There are more than 1 million names on the honor rolls of the American war dead.

Those are the men who have fought and died for our country since this Nation was founded some 185 years ago.

What we say here today expresses our tribute to all of those honored ones.

The praise we give the other departed war veterans of our personal acquaintance isin reality-praise for all who have served in the Armed Forces of our Nation.

We cannot return the dead-therefore the only remaining course is to extend tribute to them through sincerity and the beauty of our memorial services.

That is what Americans are doing today at home and abroad.

Therefore, on this Memorial Day 1960 let us for a moment visualize the memorial tributes being accorded our honored dead.

Throughout the United States and in some 25 American military cemeteries beyond our shores the mortal remains of some 400,000 Americans who gave their lives in World War I, World War II, and the Korean conflict are buried, or they are recorded as missing in action.

On this Memorial Day special ceremonies are being held at 8 American military cemeteries or special memorials in France, England, and Belgium where nearly 31,000 World War I dead are buried.

Similar services are being held for 76,000 World War II dead at 14 other American cemeteries in England, France, Belgium,

Luxembourg, Holland, Italy, and Tunisia, Also, special services are being held for more than 90,000 other World War II and Korean dead, buried or recorded as missing at American cemeteries in Puerto Rico, Hawaii, Alaska, and the Philippines.

In addition special services are being held for the war dead at the Tomb of the Unknowns-and some 99,000 other war dead buried at Arlington National Cemeteryacross the Potomac River from Washington.

Most of those final resting places are a long way from us-but in reality they are very close to our hearts.

In the American military cemeteries overseas there are graves and chapels, pools and gardens, statues and-most impressivethe walls of the missing.

All of those material tributes to the honored dead are creations of our best talent in architecture and landscaping, and in poetry and prayer.

The oversea cemeteries and memorials are in charge of the American Battle Monuments Commission and the Department of the Army.

In order to see everything more clearly let us-with our eyes closed and in deep silence-form these mental pictures.

We see acres and acres of white marble headstones.

Alined in rows they are of two designsthe Star of David for those of the Jewish faith and the Latin Cross for all others.

Those markers identify the remains of the known American war dead.

The number of these markers is startling.

There are more than 60,000 in France and 13,600 in Belgium.

Another 17,000 are in the Philippines with

13,500 in Hawaii.

There are some 12,000 in Italy, more than 8.000 in Holland, 5,000 in Luxembourg, 4,000 in England, and 2,000 in Tunisia of north Africa, and so on around the globe.

These overseas cemeteries are the resting places of only some of our known American

war dead.

Yes, there are others to be counted.

Close to rows of marked graves stand the walls of the missing.

These are tremendously imposing struc-

One of them-on the south coast of Eng-

land is 472 feet long.

And upon those walls of the missing are inscribed the names-the ranks-the combat organizations-and the home States of American servicemen presumed to be dead but whose remains have not been recovered or identified.

On those walls of the missing there are nearly 56,000 names of our honored dead.

The inscriptions upon the walls of the missing tell us that "here are recorded the names of Americans who gave their lives in the service of their country and who sleep in unknown graves—grant unto them, O Lord, eternal rest."

On the 472-foot wall in south England—there are 5,175 names of men from every State in the Union and the District of Co-

lumbia.

At Manila in the Philippine Islands more than 36,000 missing men are recorded.

Along with the graves and walls there are

memorial buildings and chapels. Inside these structures are recorded the

histories of the conflicts in which the known-the unknown-and the missingfought and died.

Sculptured figures and poems and prayers are inscribed in stone.

Typical of the tributes paid the men is the inscription in the Normandy American cemetery.

This cemetery is high on a cliff overlooking the English Channel-170 miles west of Paris-and just above Omaha Beach-where many died in the Allied D-day invasion of France in June 1944.

There are 9,386 marked graves in the Normandy cemetery-and on the wall of the missing there are 1,557 additional names

Inscribed upon the Normandy cemetery memorial buildings are these words:

"This embattled shore, portal of libera-tion, is forever hallowed by the ideals, the valor and the sacrifices of our fellow men.

Some strange circumstances are illustrated at this cemetery-as in other American cemeteries-because here we will find the final resting places of a father and son-lying side by side.

In addition-in 30 instances two broth-

ers are buried-side by side.

A part of every American military cemetery is the stone-engraved prayers.

The poetic expressions-deep from the heart-represent every religious faith.

Typical of these prayers are the following quotes:

"Take unto thyself, O Lord, the souls of the valorous that they may dwell in their

Also the Biblical quotation-St. John-10th chapter, 28th verse:

"I give unto them eternal live and they shall never perish."

Then there is this Jewish inscription beside the Star of David and Tablets of Moses: "Think not only upon their passing. Remember the golry of their spirit."

Upon each of the oversea cemetery memorial buildings there is a simple dedication by the Government of the United States.

That inscription reads:

"In proud remembrance of the achievements of her sons-and in humble tribute to their sacrifices—this memorial has been erected by the United States of America."

Here in the United States-some 170,000 World War II dead have been returned for burial in home cemeteries.

Impressive memorial services are being held for them on this day—as we are doing here.

And in the cities of New York and San Francisco memorials are being erected to commemorate many thousands of Americans who gave their lives while on war duty off the coastal shores of North and South America.

And there are other memorials-created by fellow citizens-for the war dead lost at sea.

Thus the picture is revealed of worldwide tributes to the known American war dead and to those recorded as missing in action.

It is a significant fact that the sun never sets upon all of them.

And finally, above these hallowed grounds flies the Stars and Stripes-the flag of our

It is the flag which says: "These were my defenders."

They were your defenders.

Their patriotism and their valor-were proved on the fields of battle.

Let their achievements and their sacrifices be your inspiration forever.

Ladies and gentlemen, this is the message for each of us on this Memorial Day of 1960as we pay honor to the departed ones of all

May they rest in eternal peace.

Today it is our fervent prayer that our thoughts-our words-and our deeds shall always fulfill the high ideals for which the brave have made the supreme sacrifice.

At this time let each of us recognize the obligation we have to make certain that the honored dead shall not have died in vain.

In seeking to fulfill this obligation let us fervently pray:

Lord-God of hosts-be with us yet. Lest we forget! Lest we forget!

The Privilege of Knowing

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, an eloquent editorial in the Trentonian, Trenton, N.J., of May 24, 1960, said this:

Americans have a right to the burden and the privilege of knowing;

It also said:

We are not ready to be protected from our

Hennings, Jr. whose Senate Constitutional Rights Subcommittee has been conducting a survey on Federal departmental information prac-

Mr. President, the editorial discusses matters of importance to all those who believe that citizens in a democracy have the right to know what their government is doing. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRIVILEGE OF KNOWING

Democracy is not a very tidy form of government. It is, on the whole, a rather risky business. It has neither the security of Iron Curtain secrecy nor the neat, convenient controls of a closed-skies, closedvoiced totalitarianism. It cannot edit its truths into fairy tales to be fed, happy ending by happy ending, to a rapt and captive This is the cost-if it is a costaudience. of government by, rather than government in spite of, the people. When America made the choice for freedom it also had to make the choice for the risks of freedom. And we must continue to affirm that the value far outweighs the price.

The right of the American people to know what goes on in their government has al-ways been a cherished thing. That right is basic, and to infringe upon it unnecessarily for any reason or in any name is both dangerous and inexcusable. For any overcautious attempt to diminish the insecuritics of open government can only succeed in diminishing the freedoms on which that government is founded.

In an effort to determine the extent to which restrictions on freedom of information may be infringing on the constitutional rights of the American people, a Senate Constitutional Rights Subcommittee has been conducting a year-long survey on Federal withholding of information from the public and press. Headed by Senator THOMAS C. HENNINGS, JR., Democrat of Missouri, the subcommittee questioned 96 Federal departments, agencies, and bureaus on their practices in this area.

A number of agencies confess to uncertainty about their authority to withhold or to disclose information to the public and press. and many, deplorably, continue to cite the vague doctrine of "executive privilege." Over and over appears the assertion that information is classified and withheld in the name

of national security.

The question is, In what does the national security finally lie? And we can only answer, not in illusion, not in half-truths, not in a pampered ignorance, but by clearly stating that the essential need for national self-protection must be coupled with the maintenance of an informed and mature, and thus an involved and prepared, people.

Forwarding one of the sanest perspectives on this issue in his committee's 1956 report to the Secretary of Defense, Charles A. Coolidge, classified information chairman, warns against an overcautious and confused classification system. He prescribes a dual objective for the Federal Government-"to give the public full information up to the point beyond which national security will be dam-

aged, and to protect beyond that point."
We second this strongly. Americans have a right to the burden and the privlege of knowing. Leave the Russians to their tidy-secretive and impoverished brave world-We are not ready to be protected from our freedoms.

Thanks, Mr. Khrushchev

EXTENSION OF REMARKS OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I Wish to include in the Appendix of the RECORD, an excellent editorial by David Lawrence entitled "Thanks, Mr. Khrushchev." The article appears in the current issue of U.S. News & World Report and because so many have expressed their views regarding the value of summit conferences. I believe Mr. Lawrence's editorial is very illuminating.

The editorial follows:

THANKS, MR. KHRUSHCHEV (By David Lawrence)

Sometimes from unexpected quarters we are handed a benefit. Hence we often say tha "it is an ill wind that blows no good."

Nikita Khrushchev may be surprised to learn the true consequences of his reckless action in Paris recently as he torpedoed the summit conference and publicly insulted the President of the United States.

We are, indeed, indebted to the Soviet Premier for the following consequences:

1. The credulous, naive attitudes adopted by various groups among us in their ad-Vocacy of summit conferences were revealed as hopelessly impractical. No longer will we listen to the argument that these meetings can override the historic ways of diplomacy, supersede the United Nations and leave it to four men to settle the disputes which threaten the world with nuclear war.

2. The appeasers, who have thought that the way to get peace is by making concession after concession to the enemy, now have been proved illogical, misguided and with-

out persuasive influence.

3. The leaders of thought who have urged that America maintain its strong defenses and place its reliance on the maintenance of deterrent strength have been vindicated and will now have an increasing influence with

American public opinion.

4. The tactics of the Soviet Government, as it has sought to divide the Western allies, weaken NATO and cause a crumbling of morale in the West, have been successfully thwarted. The Western alliance today has a redoubled strength—it has faith in the rightness of its cause and in its military power to deter war.

5. The world has at last been told many unpublished facts in the story of Soviet esplonage. The opportunity to do this might never have been forthcoming if a countermeasure, undertaken by the United States, had not been detected and exploited by Mr. Khrushchev when the U-2 was forced to land.

6. The knowledge of what really is going on in the cold war may have come as a shock at first to the peoples of the West, but slowly they are beginning to understand the realistic truth. They now will read and be induenced by the facts revealed about Communist infiltration as well as aggression.

7. Publication by the United States of the list of Soviet spies arrested within our own territory as they sought military information has exposed the hypocrisy of the Soviet protestations concerning the plane piloted by Prancis Powers. For Powers was merely taking pictures. His plane was unarmed and clearly marked with the initials of the National Aeronautics and Space Administration, well known as a civilian agency of our Government. Is flying 12 miles or more above any country really a violation of international law? If so, then why have the Soviets launched space vehicles which can take photographs of U.S. territory?

8. Attention has been dramatically focused on picture taking from the skies. In 1955 President Sisenhower made his open-skies proposal to the Soviet Union as a means of providing "against the possibility of great surprise attack." He proposed that the two countries give each other a complete blue-print of their military establishments from one end of our countries to the other, and

then provide ample facilities for aerial reconnaissance and picture taking of each other's territory. This plan was rejected out of hand by the Soviet Government and generally attracted little interest. Now, however, the world has been made aware of the importance of the plan and of the satellites already in orbit which can take pictures at great heights.

9. Emphasis has been placed on the surprise attack issue. It has been difficult for the Western governments to arouse world opinion on this contingency even though everyone knows the West would not strike the first blow. The world now has had brought forcibly to its attention the vital necessity of preventing or intercepting sur-prise attack. The House of Representatives, prise attack. The House of Representatives, through one of its appropriations committees, has given formal sanction to such a policy.

10. The outcry of the Soviet Government

about aggression and spying must inevitably cause the world to ask when the Soviets will withdraw their agents from Cuba and other Latin American countries, as well as from Europe, Asia, and Africa, and really cease

their aggression.

11. Last but not least, the Soviet chieftain has asserted a right to tell the American people the kind of administration he wants to see elected in this country in November. Let's grant him that privilege on the condition that free elections be held in the Soviet Union and that our radio messages no longer be jammed as we exercise a similar right to tell the Soviet people whom they shall choose as their ruler

Yes, we can say, "Thanks, Mr. Khrush-chev," for having opened not only our eyes but the eyes of free peoples everywhere to the simple fact that there can be no safety for any country as long as an arbitrary, auto-cratic regime, with the power to make sudden war, rules in Moscow.

Inspiring Tribute to the Spirit of Brotherhood

EXTENSION OF REMARKS . OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, May 31, 1960

Mr. KEATING. Mr. President, in view of its timely character, I wish to draw attention to an excellent editorial, entitled "Keep Our Beliefs, Bury Our Hatchets," which appeared in the White Plains Reporter Dispatch of May 21, 1960. This editorial was written as a tribute to the splendid record of the recently created Westchester Division of the National Conference of Christians and Jews. The dynamic and fruitful work of this fine organization in the cause of brotherhood is a matter of national knowledge and national pride.

The Westchester Division has chosen, as exemplars of this spirit of brotherhood, three outstanding persons: Mrs. Clara M. Tead, President of Briarcliff College, Surrogate John J. Dillon, and Carl H. Pforzheimer, Jr., a regent of the University of the State of New York.

In paying tribute, therefore, to the accomplishments of the Westchester Division of the National Conference of Christians and Jews, it is fitting that a special accolade of honor be accorded these three community leaders who represent a living dedication to the spirit of brotherhood. Mr. President, because of the significance of the editorial to which I have referred, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the White Plains Reporter Dispatch, May 21, 1960]

KEEP OUR BELIEFS, BURY OUR HATCHETS

Seldom has any organization in Westchester County been given such a warm welcome in its infancy as has the National Conference of Christians and Jews. Its opening program on a countywide scale-one designed, and deservedly so, best to portray organization's views—was an outstanding success. Some 300 Westchesterites turned out to applaud the aims of the conference and to do honor to three county residents who received brotherhood awards.

The unit's first choice of honorees certainly was received with acclaim. Mrs. Clara M. Tead, president of Briarcliff College, Surrogate John J. Dillon, and Carl H. Pforz-heimer, Jr., a regent of the University of the State of New York, have through their professional and personal lives dedicated themselves to the full meaning of brotherhood.

The growth of the Conference of Christians and Jews would seem assured by the warm feeling it engendered in its first program.

In particular, we liked the statement of the dinner's keynote speaker, Robert Greene, who said:

"Interfaith does not mean to bury convictions; it rather means to bury the hatchet.

'It does not mean to demolish boundaries: it rather means to remove barriers and to establish a sort of intellectual free trade between religions."

Promotion of such understanding and mutual respect will be good and wholesome and will do much to make of any community, not Westchester alone, a happier place in which to live.

Auto Fumes: Why They Must Be Controlled

EXTENSION OF REMARKS OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. ROBERTS. Mr. Speaker, interesting news has come out of the Air Pollution Control Association's annual meeting in Cincinnati about controlling automobile exhaust fumes by a cheap and simple device.

Earlier this year, the Subcommittee on Health and Safety held hearings on this subject. As chairman of this subcommittee, I am heartened by the fact that automobile manufacturers have recognized the need for such a device in smoggy areas of California and will install these devices in cars in that State. At the same time, I am puzzled and distressed by the fact that no announcement has been made that all cars will be equipped with these air-cleaning devices. Certainly air pollution does not stop at the State boundaries.

Under leave to extend my remarks T wish to include the following article

on May 25, 1960:

TESTS SHOW BIG ROLE OF "BLOWBY" IN POLLUTION

CINCINNATI, May 24 .- The Public Health Service said today that extensive tests have confirmed the importance, from a national standpoint, of one source of automobile fumes that can be controlled by a cheap, simple device.

Although the report was a technical one, it unavoidably revived the argument over whether the device should be factory installed on all new cars or merely on those manufactured for smog-ridden California.

The tests were conducted at the Robert A. Taft Sanitary Engineering Center here. 13 cars used were recent models produced

by the industry's Big Three.

In their report to the annual meeting of the Air Pollution Control Association, Andrew H. Rose said the Taft center wanted to determine the air-pollution importance of "blowby"; that is, the mixture of air and raw gasoline hydrocarbons that slips unburned past the piston rings and is vented into the atmosphere from the crankcase.

Excluding evaporation from the carburetor, Rose reported that "blowby" accounts for an average of 24 percent of the total hydrocarbons emitted by six-cylinder engines and 33 percent of those discharged by eights.

Although the differing rate is a new finding—possibly accounted for by the eights' generally higher compression ratios—the PHS report substantially confirms an accidental discovery and followup by four General Mo-

tors Corp. engineers.

PHS has cautioned against regarding "blowby" control as a panacea even if fully effective devices come into universal use. Apart from the probability that its benefits could be canceled out by the expected surge in motor vehicle registrations the hydrocarbons in "blowby" are not those that are suspected cancer producers. The suspected carcinogens are created in the combustion process, as are the bulk of the hydrocarbons that figure in the sunlight-triggered smog reaction.

That is why the PHS has said that the need will remain for much more costly afterburners, or purifiers, that hydrocarbons from the exhaust steam along with polsonous car-

bon monoxide.

Devices that route "blowby" back into the engine to be burned are not new, are of varying designs and cost and are routinely used many foreign cars. The Automobile Manufacturers Association has settled on one that, it has said, will cost "probably under \$10" factory installed and will be standard equipment on all cars made for the California market, starting no later than the 1961 models.

The late Senator Richard L. Neuberger, Democrat, of Oregon, was probably the first to protest publicly the industry's decision not to put the device on all new cars. He raised the issue in January on the Senate floor and in a letter to association president L. L. Colbert. In February a House Com-merce Subcommittee headed by Representative Kenneth A. Roberts, Democrat, of Alabama, held 2 days of hearings on the question.

The association's Carl A. Richards argued that the unburned hydrocarbons the device eliminates had been shown to be villains in Los Angeles but nowhere outside California.

He said that the industry will offer the device as optional equipment to individuals or to localities outside California in which it is determined that it is needed or wanted.

Arguing the auto-caused air pollution is a problem in all metropolitan areas, Arthur S. Flemming, Secretary of Health, Education, and Welfare, said the device should be built into all new cars. He warned the industry that if this is not done voluntarily, legislation making such installation compulsory may follow.

which appeared in the Washington Post The Second Avenue United Brethren Church, Altoona, Pa., Honors the Nation's War Dead

> EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. VAN ZANDT. Mr. Speaker, among the many Memorial Day services in the central Pennsylvania area was one conducted by the members of the Second Avenue United Brethren Church, Altoona, Pa., on Sunday morning May 29.

It was my privilege to deliver the following address as part of the Memorial

Day program:

Memorial Day, 1960, Address by Representa-tive James E. Van Zandt, Member of Con-gress, 20th District of Pennsylvania, at THE SECOND AVENUE UNITED BRETHREN CHURCH, ALTOONA, PA., MAY 29, 1960

Memorial Day is truly a day of reverence. Of all our great national holidays, Memorial Day is the most sacred, the most solemn, and the most beautiful.

When we assemble on the Fourth of July we meet to celebrate our independence.

It is the Nation's birthday party, and is rightly and properly an occasion for festivity and rejoicing.

But Memorial Day which precedes it partakes of something quite different:

It has been well called the most beautiful and sacred of our national holidays.

May it ever remain so.

And if I know my countrymen as well as I think I do, it will so remain.

Long ago, on the eve of his own supreme sacrifice, it was said by one who knew the secret of every trembling heart that "greater love hath no man than this, that a man lay

down his life for friends." I am happy to think that loyalty and en-during gratitude are to be numbered among the more endearing traits of the American

character. We have our faults-we are not yet angels and archangels, to be numbered among the hosts above.

I do dare assert, however, that as a people, both individually and collectively, we are not a nation of ingrates.

Nor as a people are we insensible to the needs and sufferings of our fellow beings of other lands.

Where, in the recorded history of mankind, can there be produced such a record of the outpouring of medical, financial, and material assistance to the stricken peoples of the earth?

Wherever the Four Horsemen have galloped over the earth, leaving fire, flood, pestilence, and starvation in their wake, American doctors and nurses, American dollars, American grain, and medical supplies have followed.

If there are blots on our shield, if we as a Nation have made our mistakes, surely American kindliness and American generos-Ity have gone far to atone for our faults.

Meanwhile, it is pleasant to reflect that on Memorial Day year after year, decade after decade, yes for nearly a century now, the American people have assembled in their towns and villages.

They have gathered together in their great cities, in the lonely, isolated little communities scattered over the vast prairies, everywhere, all over this broad land, they have set aside this day to pay loving and reverant tribute to those who once laid down their lives that this Nation might

How beautifully Theodore Roosevelt expressed it when meditating upon the loss of his youngest son, who himself had made the supreme sacrifice, he wrote:

"Only those are fit to live who do not fear to die; and none are fit to die who have shrunk from the joy of life and the duty of life.

"Both life and death are part of the same

great adventure.

"Never yet was worthy adventure worthily carried through by the man who put his personal safety first."

The official origin of Decoration Day, or as we now term it, Memorial Day is to be found in a directive issued May 5, 1868, by Gen. John A. Logan, the first commanderin chief of the then recently organized Grand Army of the Republic.

In a general order designating May 30 thenceforth as a day of memorial to union dead of the great war so lately brought to a close, General Long penned

these eloquent words:

"We are organized, comrades, as our regulations tell us, for the purpose, among other things, of preserving and strengthening those kind and fraternal feelings which have bound together the soldiers, sailors, and Marines, who united together to suppress the late rebellion.

"What can aid more to assure this result

than by cherishing tenderly the memory of our heroic dead, who made their breasts barricade between our country and its

"Their soldiers lives were the reveille of freedom to a race in chains, and their deaths the tattoo of rebellious tyranny in arms.
"We should guard their graves with sacred

vigilance.

"All that the consecrated wealth and taste of the Nation can add, to their adornment and security, is but a fitting tribute to the memory of her slain defenders.

no wanton foot tread rudely on

such hallowed grounds.

"Let pleasant paths invite the coming and going of reverent visitors and fond mourners.

"Let no vandalism or avarice or neglect, no ravages of time, testify to the present of to the coming generations that we have forgotten, as a people, the cost of a free and undivided republic."

General Logan continued by saying:

'If other eyes grow dull, and other hands slack, and other hearts grow cold in the sol-emn trust—ours shall keep it well—as long as the light and warmth of life remain to

"Let us, then, at the time appointed, gather around their sacred remains, and garland the passionless mounds above them with the choicest flowers of springtime;

"Let us raise above them the dear old flag they saved from dishonor;

"Let us, in this solemn presence, renew our pledges to aid and assist those whom they have left among us—a sacred charge upon a nation's gratitude-the soldier's and sailor's widow and orphan."

Thus spoke Gen. John A. Logan, the first commander in chief of the Grand Army of

the Republic.

As we in the North observe Memorial Day. our Southern brethren observe various dates of their own, according to the birthday anniversaries of various Confederate heroes.

Behind this inception of a day of national tribute lies an interesting and, to me a very moving little story, which I should like to repeat to you.

On April 6-7, 1862, was fought the great Battle of Shiloh—the bloodiest up to that time ever fought on American soil.

The Union losses in that battle in killed, wounded, and missing were over 13,000 and

Confederate nearly 11,000.

After the battle, the bodies of some 1,500 of the Confederate fallen were brought to Columbus, Miss., then a small town.

With the Confederate dead were also brought the bodies of 100 Union soldiers.

All were buried in a plot of land originally purchased by the local Odd Fellows but now taken over for a more serious purpose.

On April 26, 1866, just a year after the great conflict had ceased, a group of Columbus ladies met and in solemn and reverent procession marched to the little buryingground and there laid flowers on the graves of Union and Confederate dead alike.

Thus, on that first local Memorial Day at Columbus, Miss .- 94 years ago-the graves of Union soldiers were decorated by ladies of

To me there is something intensely sym-

bolic in this gracious gesture.

It was a gesture made a century ago by these gentle ladies who were sitting even then in the shadow of defeat and humiliation.

I like to think that in that act—so simple in itself and yet so far-reaching in its implications-is embodied for all time the best of America-and of American womanhood.

The book which recorded the names of Confederate and Union dead who were laid to rest in this corner of the Deep South has long since disappeared.

Yet onetime friend and foe sleep peacefully beneath the magnolias of the little Mississsippi graveyard now fittingly called

Friendship Cemetery.
Originally termed "Decoration Day," with the passing of time and the thinning of the ranks of the GAR, more and more the occa-

sion tended to be observed as a day dedicated to American dead of all wars.

At last, on September 18, 1915, the War

Department issue a ruling that:
"The objects of this day, as understood by the War Department, are not only to decorate the graves and honor the memory of those officers and enlisted men who served as volunteers in the Civil War and in the war with Spain, but also those who served in the Regular Army, irrespective of whether such service was rendered in time of war, or time of peace."

As the years passed, and the Grand Army of the Republic gradually melted away, the day became known as a memorial day to all the war dead.

Since the original purpose was to decorate the graves of the soldiers who had fought to preserve the Union, the formal observance always dignified and reverent—was given a military aspect from the very beginning.

For many years the public ceremonies of the day were in charge of the GAR post of every community.

Throughout the Northern States the pattern was much the same, whether in great cities, small towns, or country villages.

Most of us are quite familiar with the observance of Memorial Day.

There was the procession to the cemetery, to the accompaniment of bands playing patriotic airs.

Then the formal ceremonies, consisting of the singing of appropriate songs, the reading of the Gettysburg Address, the singing of the national anthem, and, finally, the climaxthe delivery of a memorial address composed for the occasion.

A flag and flowers were always placed on each serviceman's grave—a custom that is

Iollowed reverently today.

Gradually it has likewise become the custom for individual families to decorate the graves of their dead-irrespective of military service.

On Armistice Day, November 11, 1921, the body of the soldier of the First World War-"known but to God"—was reverently laid to rest in the beautiful national cemetery on the banks of the Potomac River at Arlington, Va.

In 1958 the bodies of the unknown of two other conflicts—the Second World War and the Korean conflict—were laid, one on either side of the first unknown soldier.

The term "soldier" was not inscribed on the tombs of these last-since the bodies were selected from those who might served in any capacity, military or civilian.

So on the heights of beautiful Arlington—

at the heart of our most sacred national shrine—with the Lincoln Memorial, the Washington Monument, and the Jefferson Memorial just across the river—and the great dome of the Capitol looming up in the distance—the three unknown will sleep in peace until the last reveille.

On this Memorial Day of 1960-we must ask ourselves once more—how we, the liv-ing—can best honor and, in a measure, repay-the deathless sacrifice of these honored dead

The answer, is to fix our eyes upon the problems immediately confronting us— whether within our own borders or pressing upon us from the world withoutthese problems steadily and to see them

Surely we can best honor those-who, gave their lives for their country-by looking present world facts in the face, and squaring up to them accordingly.

Let us remember that the truth itself

never hurt anybody.

We must be on guard against those who, through wishful thinking would bring America to the brink of disaster by their thoughtless conduct.

They are—what Theodore Roosevelt used to call "the foes of our own household."

They are-in their way-every bit as dangerous-even if unintentionally so-as the sinister forces of communism.

The failure of the summit conferencethrough the despicable conduct of Khrushchev—is added reason why Russia's pro-fessed desire for peace is highly question-

Many competent observers are of the opinion that the outrageous conduct of Khrushchev was a demonstration-on his part-to impress the Russian people-millions of whom are reported to be in a rebellious mood over the iron-fisted rule of the Kremlin,

Meanwhile, until universal peace is assured there could be no more wicked folly than to lower our guard and relax our watchfulness.

Even were we willing to abandon eternal vigilance and thus assume so terrible a risk for our own generation-we have no right to expose our children, and their childrento a future of unspeakable possibilities.

On the evening of May 19, 1953, President Eisenhower—after 4 months in office addressed the American people and told them bluntly:

'I believe firmlyand I think the Soviets realize-that the United States, if forced to total mobilization today, could meet and win any military challenge.

I believe no less firmly that we must see and meet the full nature of this danger immediately before us.

"For the nature of this danger indicates the nature of the defense we summon.

"This defense must, first of all, be one which we can bear for a long-and indefinite-period of time.

'It cannot consist of sudden, blind responses to a series of fire-alarm emergencies, summoning us to amass forces and material with a speed that is heedless of cost, order and efficiency.

"It cannot be based solely on the theory that we can point to a D-day of desperate danger, somewhere in the near future, to which all plans can be geared.

"The truth is that our danger cannot be fixed or confined to one specific instant.'

In closing President Eisenhower said: "We live in an age of peril.

"We must think and plan and provide-so as to live through this age in freedom-in ways that do not undermine our freedom even as we strive to defend it."

My friends, these plain words, spoken 7 years ago, by President Eisenhower are equally as true today.

I have seen two world wars and the Korean conflict.

I do not wish to see World War III.

I do not wish my boy to see so terrible a conflict as an all-out nuclear war.

Ladies and gentlemen, there is one waybut one way-under providence, to avert it. Surely that way is plain enough.

We must keep our faith clean, our judgment clear, our nerves steady, and our powder dry.

Therefore, on this Memorial Day, in the year 1960, we should do well to remind ourselves, that "eternal vigilance is the price of liberty."

Address by Senator Wiley Over Radio Station WIND, Chicago

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, May 31, 1960

Mr. WILEY. Mr. President, the new tough line adopted by the Soviets, requires, I believe, a new look at the adequacy of U.S. defenses: as well, it reaffirms the need for a strong mutual security program.

Fortunately, the Soviet propaganda blast-off on the U-2 flight over Soviet territory is losing amplitude. Why? Because it cannot keep airborne on used-over fuel.

As yet, it is not possible to assess just how far reaching will be the impact of this switch in Communist tactics. In the light of the toughening policy, however, I believe that we need to take a new look at our defenses.

In addition, I believe this situation again reaffirms the essentialness of maintaining a strong mutual security program-for which appropriations still need to be considered by Congress.

Recently, I was privileged to comment on both these aspects of our security in a broadcast over radio station WIND, Chicago. At this time, I ask unanimous consent to have excerpts of my address printed in the Appendix of the RECORD.

There being no objection, the excernts were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ALEXANDER WILEY, RE-PUBLICAN, OF WISCONSIN, SENIOR REPUB-LICAN ON THE SENATE FOREIGN RELATIONS COMMITTEE, OVER STATION WIND, MAY 29, 1960

Friends, I welcome the privilege to discuss with you once again major problems confronting us, our Nation, and the world.

On the global scene, the Soviet renewal of the tough-line policy requires:

First, time for assessment of its real impact and significance for world affairs and

Second, a determination of its effect upon our security, defense and domestic economy.

Fortunately, the majority of people around the globe saw through the thinly veiled propaganda over the U-2 flight which Mr. Khrushchev used for an excuse to torpedo the summit conference.

In the light of the tougening policy line by Mr. Khrushchev, however, the question now is:

Just how rocky will be the road ahead? NEEDED: NEW LOOK AT OUR DEFENSE

In reviewing the reflections these international developments have upon our do-mestic life, we need to ask: "What impact will the toughening policy have on our defenses?"

Currently, the appropriations for the fiscal year 1961 are before the Appropriations Committee of the Senate. As I understand it, the President has also made guideline recommendations to the Defense Department for carrying on outlays at about \$41

billion for 1962. What does our defense provide us? Among other things, the following:

Military strength of about 2.5 million men and women in the active forces.

Eight hundred and seventy thousand men in the Army.

Eight hundred and seventeen active ships. Six hundred and nineteen thousand men

in the Navy. Three divisions of the Marine Corps and

3 Air Wings with 170,000 men; and an Air Force of 91 combat wings with about 825,000 men.

In addition, the nation has an ever-growing arsenal of missiles—capable of hitting a target with nuclear warheads—including intercontinental, intermediate range and other types of missiles. For the future, the timetable of defense planning calls for creating ever-greater nuclear-missile firepower.

The objective: a farflung defense system of manpower, planes missiles, ships, gunsoperating from strategically located basesto act as a deterrent to a would-be aggressor.

Overall, I am confident that our defense is strong, adequate—a tremendous deterrent to be reckoned with, especially since the Midas-21/2-ton missile-is in orbit. it functioning, we don't need a U-2 or openskies arrangement.

In the light of the renewal of a tough line policy by the Communists, however, we may well need to take a new look at our defenses-to make any necessary adjustment for these challenging times.

NEEDED: STRONG MUTUAL SECURITY PROGRAM

Now, let's take a look at the global free world security systems. Through the years, the U.S. mutual security program has proved to be the backbone of allied defense—helping to hold the line against Communist aggression in Greece, Turkey, Iran, Laos, Korea, and Taiwan.

How does it strengthen our defense? By the following means:

Binding together our people and resources in a chain of defense against Communist aggression.

Supplements U.S. forces by millions of men and greater firepower in guns, missiles, jet planes, ships, and other armaments.

Providing strategically located bases on the periphery of the Communist camp.

The U.S. contribution to the program—largely spent in this country for goods and equipment-also creates over one-half million jobs for our workers.

In addition, the economic, technical assistance, and other programs—as well as availability of loans—enable the less developed countries to lift standards of living; wipe our poverty, starvation, disease; and generally promote economic progress. Eliminating the reasons for ferment and unrest is ultimately essential-if peace and stability are to be established in the world. In addition, these areas serve as targets for Communist activ-

Recently, the Congress passed a bill to itv. authorize an additional \$1.3 billion, raising the ceiling for the program to over \$4 billion. However, the actual appropriations-that is, 'opening the purse strings"-have not yet been approved by Congress.

Overall, the mutual security program-a good investment in peace, defense, and sta-bility—fulfills a national self-interest of greater security as well as strengthens our

role as a world leader.

PROGRESS FOR DOMESTIC PROGRAMS

Now let's take a look at the home front.

We recognize, of course, that it is absolutely essential that Congress enact the necessary legislation to enable Uncle Sam to carry out his proper role in supporting programs for domestic progress.

In view of the load of past obligationswell as high costs of defense-these are difficult budgetary problems.

Let me, now, give you an example of the kind of question which your Senators and Representatives in Congress will be faced with in the days ahead. These include, for example:

Do we want a Federal aid-to-education bill? If so, should it be restricted to school construction, or should it be allocated for teachers' salaries and other educational needs?

If you do not want additional Federal aid, are our citizens—and this means you and me-willing to assure, by community effort, adequate schools, facilities, and teaching staffs to meet the ever-increasing enrollments of students.

Overall, this is the type of question that will need to be faced in such significant fields as: Public works, including river and harbor development; agriculture; housing; hospitalization benefits and care for senior citizens; conservation; and many other areas of domestic progress.

According to Budget Director Stans, for example, the country in the past— by adopting programs with future obligations—is now saddled with a long-range debt of \$730 billion.

Currently, a "hopper full" of bills in Congress would, if enacted, cost an additional \$325 billion in the next 5 years. The total would be over a trillion dollars.

With this realistic long-range picture, Congress has a great responsibility to the taxpayer to keep spending down to essentials.

We recognize, of course, that this is an election year. As always, this encourages the proposal of supposed vote-getting legis-

However, the American taxpayer, today, is already saddled with a heavy burden. Consequently, a major battle on the "home front" may well involve counter-effort to front" may well involve counter-effort to "hold the line" on excessive spending to prevent further burdening our taxpaying citizens.

Overall, our major task is to establish a priority system for support of necessary programs both on the domestic and international fronts. The output of our Nation has reached a peak of over \$500 billion annually. If we act wisely and prudently-and not lose our heads-I am confident that we can provide the financing—from private sources as well as local, State, and Federal govern-ments—to meet the challenges ahead.

CONCLUSION

These, then are a few of the major decisions which we in Congress will be required to make prior to adjournment. A big ques-tion is: What do you, the people of America, want? This is your Government. The Congress is responsive to your will. If you speak en masse, you will be heard. Now, I want to express my deep appreciation for the oppor-tunity to discuss these issues with you.

Crossroads Africa

EXTENSION OF REMARKS OF

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. HALPERN. Mr. Speaker, in the summer of 1958, a group of 60 carefully selected students-59 Americans and 1 Canadian-together with their leaders undertook an exciting adventure of faith and freedom in 5 countries of West Africa where historical forces are sweeping toward a new destiny which may well determine not only the future of Africa, but also profoundly influence the future of the entire world.

The Africa student study and work camp project called Crossroads Africa. involved a bold venture of person-toperson relationship in depth. It took 2

years in the making.

It was organized as a pilot program to test theoretical and ideological concepts about Africa; to develop relationships with this rapidly emerging continent on the basis of a practical first-hand experience and personal confrontation, and to evolve plans for effective assistance to Africa in the problems facing her in the present, and toward the fulfillment of her future historic role.

It was a tremendously successful en-

The students were selected from 41 educational institutions in the United States and represented every one of the religious, racial and social groupings of our Nation. They were united by a common desire to help share future relationships with Africa and to prepare themselves to shoulder responsibility for that area of the world in an intelligent manner. The adventure they sought was with people and events rather than places and things.

When they returned to America the students carried on extensive activities making known thier work and their reactions to the program and to the possibilities for American-African relations.

Through discussions with African leaders and with the man in the street and through work camps where they cleared jungle and constructed schools and water supply systems, the students sought to demonstrate our respect for Africans as individuals and our desire to work with them and understand them better in a world which is rapidly becoming one neighborhood which demands increased mutual respect and responsibility among all peoples.

In Ghana the students constructed a village school at Safo in the heart of Ashantiland. The original goal of the project was a two-room school building-When the progress of the work exceeded all expectations, the local chief called a meeting of his elders and people and asked them to raise money for enough materials to build a seven-room school instead. The villagers responded with contributions of an additional \$2,000 and the project was enlarged. When the group constructed a school in Liberia they were beseiged by delegations from other villages asking that similar projects be initiated there. In Sierra Leone the students accomplished an almost impossible task of building a water supply system through the jungle and using equipment that had been brought in for the job much earlier and had been lying around in deteriorating condition.

Reaction from the students, from African leaders, and from United States leaders was highly favorable. As a symbol of concern by Americans for the World in which they live, Crossroads Africa was a smashing success. Knowledge, relationships, and understanding between peoples separated by thousands of miles of ocean were tremendously improved. Foundations for future relationships were laid and American educators and leaders were afforded the opportunity to garner knowledge and ex-Perience to serve in cementing American-African ties. Through that new knowledge they can eventually evolve those economic, educations, political, religious, and intercultural relationships which will accrue to the greatest mutual benefit of both Africa and the United States and thus strengthen the free world.

Mr. Speaker, it is significant to note that another Crossroads Africa project is being undertaken—this time reaching to 10 countries in West Africa. Onehundred and ninety students will participate and, like the previous venture, this one will be under the outstanding direction of Dr. James H. Robinson.

Dr. Robinson, pastor of the Church of The Master in Manhattan, was the pioneer and stimulus of the first trip. He is one of the great spiritual leaders in the Nation, and is well-known as an author and lecturer. His greatest recognition has perhaps come from his magnificent Work in the field of human relations, and he is noted as one of the most effective unofficial good will ambassadors the United States has ever had.

I am particularly proud that Dr. Robinson's associate director in both the previous and forthcoming ventures is a resident of my district, Dr. Israel Mowshowitz. Rabbi Mowshowitz is not only the minister of the Hillcrest Jewish Center, in Queens, which is one of the Nation's Outstanding religious congregations, but he is also chairman of the International Affairs Committee of the New York Board of Rabbis and is actively engaged in the splendid work of the National Conference of Christians and Jews.

His excellent work in community projects and in the good fight for brotherly love and the dignity of man has earned him the deep affection and respect not only of the people of Queens but of all Who have come to know him or his works.

To Dr. Robinson, Dr. Mowshowitz and to the organizers and students who are engaged in this wonderful venture in human relations, I want to express my Warmest congratulations and commendations.

Dr. Kandle Commends Cape May Freeholders on Public Health Setup

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Tuesday, May 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the New Jersey State commissioner of health, Dr. Roscoe P. Kandle has given well merited praise to the Cape May County Board of Chosen Freeholders for establishing a new position intended to improve health services in that county. A news release, issued by Dr. Kandle, explains the significance of the new position, may be of interest to other officials who may be contemplating similar action elsewhere in the Nation.

Mr. President, I ask unanimous consent to have the release printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

DR. KANDLE COMMENDS CAPE MAY FREEHOLDERS ON PUBLIC HEALTH SETUP

TRENTON, May 19 .- Dr. Roscoe P. Kandle, New Jersey State commissioner of health, has commended the Cape May County Board of Chosen Freeholders for establishing the position of county public health coordinator and on its prompt appointment of a qualified licensed health officer to fill the position.

The Board of Chosen Freeholders of Cape May County has announced that Joseph Pack, formerly employed by the New Jersey State Department of Health, will begin work as the county public health coordinator on

In a telegram to Lawrence M. Lear Director of the Cape May County Board of Chosen Freeholders, Dr. Kandle said:

"I congratulate and commend the Cape County Board of Chosen Freeholders on its creation of the post of county public health coordinator and on the prompt appointment of a qualified licensed health officer to fill the position.

"By these actions, you have shown that you are concerned with protecting the health of residents of the county and visitors to the

"I am sure that officials in other counties will watch developments in Cape May County with a great deal of interest.

"This department will cooperate in every way possible with your board and with the county public health coordinator in the development of good local public health

The freeholders created the post of county public health coordinator by resolution on March 1. A grant-in-aid contract between the State department of health and the board of chosen freeholders provides for financial assistance to the county from the State at the outset. Since March 1, the board had interviewed several candidates for the position.

Dr. Kandle said this is the first time in the history of local public health administra-tion in this State that such a position has been created by a board of freeholders.

Pack, who holds a New Jersey health officer's license, has a bachelor of science degree from the University of Denver and the degree of master of science in public health from

the University of North Carolina. He has done graduate work at the University of Arizona and at Yale University. He served for a time as supervisor of food sanitation for the Arizona State Department of Health. that capacity he was responsible for supervising the State's program for eating and drinking establishments, the development of food handler training courses, restaurant rating surveys, and the administration of pure-food laws. Earlier, he had served as senior sanitarian in several counties in Arizona and Colorado.

While with the New Jersey State Department of Health in the last 3 years, Pack has been involved in activities relating to community water supplies, sewage disposal plants, industrial waste treatment plants, and stream pollution control.

Dr. Kandle said that, "While the department is sorry to lose the services of Joseph Pack, we are pleased that he will still doing public health work in New Jersey. The Cape May opportunity is a challenging one. We understand that among his duties will be enforcement of the State sanitary code and local public health ordinances and codes in those municipalities in the county which designate him as health officer. He will work to develop and strengthen the recognized public health activities which all New Jersey boards of health are required to carry on by April 1, 1961.

We in the State department of health are pleased that the steps taken by the Cape May County Board of Chosen Freeholders have received the approval of the Cape May Medical Society, the Cape May County Health Council, the Cape May County Chamber of Commerce, the Cape May County League of Municipalities, Cape May County Regional Health Commission, and many individual mayors and local boards of health.

We look upon the creation of the posiwe look upon the creation of the posi-tion of county public health coordinator as one approach to the strengthening of local health services. New Jersey is noted for the ingenuity shown by local communities in devising patterns of services to meet local needs. We assume there will be other pat-

terns in other areas."

Pack, who is 30, and his wife Margit and three daughters, Rebecca, 10, Dinah, 8, and Jessica, 2, have been making their home in the Trenton area (Ewing Township). Mr. Pack said he and his family plan to live in Cape May County.

News Release From the Chamber of Commerce of the United States

EXTENSION OF REMARKS OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eloquent and well-reasoned plea for mutual security by one of America's most respected institutions, the Chamber of Commerce of the United States:

Washington, May 18.—President Arthur H. Motley of the Chamber of Commerce of the United States today issued the following appeal for national support of mutual secu-

rity:
"The unyielding and hostile posture of
the Soviet Union at the summit conference

makes it essential that the United States and its allies stand up to the threats of Communist power with full confidence in

their unity and strength.

"Such unity and strength depend, per-haps as never before, on the support of a united American people for a strong and effective mutual security program, which faces the possibility of a heavy congressional cut at this critical time.

"Foreign aid is costly, but vital to our security. We cannot afford to relax our support of indispensable defense establishments and arrangements throughout the non-

Communist world.

"The Congress will soon have to decide what level of mutual security appropriations is necessary to fully support the foreign policy of the United States. There is a great danger, however, that the people and the Congress will become so preoccupied with some deficiencies in foreign aid that we as a nation will fail to support its basic and essential purposes: to strengthen the free world and thus provide security against Communist aggression.

"I, therefore, appeal to all citizens-as individuals and as groups—to make known to Congress their support of an efficiently administered and hard-hitting mutual security program that will effectively contribute to our defense and to the overall strength of our allies and friends abroad."

The Russian Trawler's Visit

EXTENSION OF REMARKS

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Tuesday, May 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the cold war is not fought with the same intensity as a shooting There are still occasions when, on a people-to-people basis, the friendly instincts of human beings manage to appear. In Atlantic City recently, one such incident occurred, and it occurred at a time of great strain between this Nation and the Soviet Union. An editorial in the May 24 edition of the Atlantic City Press discusses that incident and draws some interesting conclusions

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Atlantic City Press, May 24, 1960] THE RUSSIAN TRAWLER'S VISIT

The natural curiosity with which people from different parts of the world regard each other was clearly evidenced during the weekend stay here of the Russian trawler.

The 120-foot boat was fishing off the coast when it requested, and was granted, permission to make an emergency landing of a sick person in this resort.

As was to be expected, naval, Coast Guard, and port authorities made a thorough check of the vessel, but there was no thought of detaining her.

The ailing crewman, a 26-year-old Soviet technician, was taken to Atlantic City Hospital where he is receiving the best of care.

While docked here, the trawler and its complement of 22 men and 2 women proved

an attraction for thousands of visitors from near and far. Although the crew was restricted to shipboard, there was a good deal of gawking and waving of greetings on both

Newsmen and coast guardsmen who could get near enough indulged in some swapping of cigarettes and coins with the Russians.

Despite the strained relations between the two countries, there was no mistaking the display of people-to-people friendship.

The incident also served to point up the

fact that in the area of health there is international cooperation and desire to do all possible to carry on the traditions of succor.

Where means of destructiveness are concerned, there is secrecy and the necessity for spying. Where capacity for cure of disease is concerned, there is no secrecy and no

need for spying. Medical advances, miracle drugs are made available to all. For example, Dr. Albert Sabin, of Cincin-nati, is a celebrity in the Soviet Union, even though his name may not ring a bell with many Americans. Four years ago he developed a live-virus vaccine that can be taken orally for poliomyelitis. The Russians have been using the vaccine effectively even though it has yet to be licensed by the U.S. Public Health Service for general use in this

For what it's worth, we have the word of a grateful Russian patient in our local hospital:

"If anything should happen to an American like happened to me while he was in Russia, I know the Russians would treat him

Workers Support President in Summit Crisis

EXTENSION OF REMARKS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. BRAY. Mr. Speaker, one of the gratifying aspects of the serious international tension of this month has been the clear-cut indication of American unity. Whatever hopes the Communists entertained of splitting the people of the United States were shattered as we replied with one voice to the taunts and jeers the Soviet Premier directed out at our President.

An example of how America's workers backed the President is found in the following article from the May 27 issue of the official publication of the Indiana State Building and Construction Trades Council, the Leader:

U.S. WORKERS "BEHIND IKE" IN SUMMIT CRISIS

Here is the text of a statement issued by AFL-CIO President George Meany in support of President Eisenhower following destruction of the Paris summit conference by Premier Nikita Khrushchev of the Soviet

"Soviet Russia has now demonstrated the bankruptcy of her position on peace.

"Khrushchev has destroyed the hopes of the free world that the tensions of the cold war could seen be eased.

"Clearly Khrushchev sought to create political division in America by his intemperate and insulting denunciations of President Eisenhower.

"His attack on the President will have the opposite effect. It will unite America.

"The workers of this country stand behind President Eisenhower. Their confidence in the honesty of the peaceful intentions of the United States is matched only by their thorough mistrust of the intentions of Soviet Russia.'

Development of Nuclear-Powered Aircraft

SPEECH OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 24, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12326) making appropriations for civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, the Atomic Energy Commission, the Tennessee Valley Authority, and certain study commissions, for the fiscal year ending June 30, 1961, and for other purposes.

Mr. CONTE. Mr. Speaker, recent events have made it more evident than ever before that we cannot rely on diplomacy alone to maintain our position of eminence as a world power. It has become more obvious than ever that the only way to negotiate with the Kremlin is from a position of unquestioned strength. The President has stressed the fact time and again that our defenses are based on the maintenance of a balanced military potential. One of the integral factors in such a balanced military system, we have been told by the experts, is the existence of a strong manned aircraft program, and it is becoming ever clearer that the need for such a program will be with us for years to come. We have heard convincing arguments made for the advantages of manned planes which can be projected far into the future-antisubmarine patrol, airborne alert, super high level reconnaissance are only a few.

Our decision must be whether or not to continue in full force a program which will have a direct and important bearing on the future success of our manned aircraft arm and which may well have a tremendous significance in areas of military technology not yet even imaginable. Only last week Deputy Chief of Staff, Lt. Gen. Mark E. Bradley, told an Armed Forces Day audience in Hartford. Conn.:

The primary reason for the continued use of the bomber is, of course, their capability for launch and recall, as well as their capability for airborne alert.

Noting that he was not directing his remarks to any specific type of aircraft. he said:

It could be a nuclear type of plane, a mark III type such as the B-70 or something else—if something else is feasible. But whatever its shape and performance, the case for the next generation-manned bomber is obvious. This Nation simply cannot abandon the development of military aircraft.

For Congress to take a chance on anything less than a wholehearted effort in the direction of operational nuclear powered aircraft would have been unthinkable.

I have no doubt that those who opposed continuation of this project were convinced that their action to strike these funds was in the best interests of the Nation's taxpayers. I feel that we have a strong responsibility to look hard at this program to evaluate its efficiency, but I also feel we have been unrealistic in our insistence on demanding to know exactly where and in exactly what fashion the nuclear plane will be used.

General Bradley, you will notice, ad-

mittedly said:

A nuclear type of plane-or something else.

It may be the something else will be more feasible. But if the nuclear type of plane does prove to be the one on which we must depend I would not dare to be on record as having held up the program to develop that plane for one day.

The record shows that this program has been one of starts and stops, of concentrations and cancellations, and Congress has not been blameless in this regard. This may have been unavoidable, but it also seems unavoidable to me now that we must maintain this project. It has been said often before, but it seems to me to have never been more appropriate, that if we must err, at least let us err on the side of strength.

In closing I would like to cite statements made by three eminent authorities on the subject of the nuclear pow-

ered aircraft.

Gen. Thomas D. White in a recent issue of the Air University Quarterly stated:

The military exploitation of airborne nuclear propulsion will provide a significant increase in our future deterrent capability, an increase which must be realized if this capability is to remain effective.

In the same issue of the Air University Quarterly, Lt. Gen. Roscoe C. Wilson, Deputy Chief of Staff, Development, USAF, in writing on aircraft nuclear propulsion, stated:

The possibility of missions of several days duration permits the effective utilization of as high as 50 percent of the force on air alert. The use of the manned nuclear bomber in a high-endurance weapons system on air alert permits flexible and positive timing, control and target assignment.

Lt. Gen. Robert M. Lee, vice commander of the Air Defense Command, in a speech before the American Ordnance Association on December 2, 1959, in New York City stated:

Long-range aircraft with great endurance are a needed element of our diversified aerospace force. Many continuing and new roles for manned aircraft can be foreseen. They may be based on airborne missile launching techniques; attack against previously unlocated, hard to locate and movable targets, reconnaissance requirements, and possible participation in local wars.

From an address from General Thomas D. White, before the Institutional USAF Conference on Air Force ROTC Affairs at Maxwell Air Force Base December 9, 1959. Speaking on the Hound Dog and other modern airlaunched missiles, General White stated:

Perhaps of more importance, such weapons when carried by our present bombers and someday by nuclear-powered aircraft of practically unlimited range and endurance will provide our country with the highest degree of flexible and mobile striking power ever achieved. Far-ranging aircraft armed with these weapons will be able to conduct patrols at hundreds of miles per hour. They would be comparable in air coverage to that of a police squad car as measured against a cop on the beat. Such forces would be virtually invulnerable to surprise attack.

From remarks by Lt. Gen. Roscoe C. Wilson, Deputy Chief of Staff, Development, USAF, before the American Ordnance Association meeting in New York City, December 2, 1959. In speaking of the atomic-powered aircraft, General Wilson stated:

This airplane is still some years in the future, but the promise of unlimited range and resulting operational flexibility keeps us extremely interested in obtaining a capability with this type of propulsion.

General Wilson in a speech before the Aviation Writers Association convention in Washington, D.C., on May 15, 1959, stated:

Nuclear power will enable us to penetrate enemy territory at low altitudes and high speeds undetected by long-range radars and thus relatively secure from interception by enemy fighters.

The Story of Chief Joseph: From Where the Sun Now Stands

EXTENSION OF REMARKS

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Friday, May 27, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remraks in the Appendix of the Record, I wish to present to the readers of the Congressional Record, a story of Chief Joseph, leader of the Nez Perce Indian Tribe, one of the most remarkable Americans who ever lived.

This story, authored by my good friend, Mr. Bruce A. Wilson, editor of the Omak Chronicle, Omak, Wash., provides an excelent chronology of the last year of the Nez Perce's struggle for their hereditary freedom. Mr. Wilson's article takes exception to several long-standing assumptions regarding Chief Joseph. For instance, Mr. Wilson points out that rather than being "the Red Napoleon," noted for his military prowess, Chief Joseph was more comparable to Abraham Lincoln, a man of sound judgment and peaceful motives.

Mr. Wilson's article, which has received wide acclaim, relates that the Nez Perces were traditionally people of peace. This story tells how the tribe resisted conflict to the last until, finally, they declared war upon the "white soldiers."

It was only then that the Nez Perce proved themselves to be fighters without equal. Only because of overwhelming numbers of soldiers and after a year of bitter fighting did the Nez Perces surrender and were sent to the Colville Indian Reservation located in the 5th Congressional District of Washington which I represent.

On September 21, 1904, Chief Joseph died at Nespelem, the headquarters of the reservation. Today, there are about 4,300 enrolled members of the Colville Confederated Tribes. The 216 Nez Perces affiliated with the Colville Tribes are not many more than the 150 Chief Joseph led to the Colville reservation 75 years ago.

The story is too lengthy for inclusion in a single copy, hence I will have it included in parts for several successive days:

THE STORY OF CHIEF JOSEPH: PROM WHERE THE SUN NOW STANDS

(By Bruce A. Wilson) FRIDAY, OCTOBER 5, 1877

Slowly the great chieftain rides up the gentle slope. The freshly fallen snow has been painted a sullen orange by the sun low on the western horizon. Silence hangs sluggishly over the battlefield. It is broken only by the muffled beat of the pony's hoofs and the shuffling of tattered moccasins worn by four young warriors walking beside their leader's mount.

Chief Joseph wears no feathered headdress. His scalp lock is tied by otter fur. The rest of his hair hangs in two thick black braids on either side of an impassive face. A desultory wind plucks at the worn gray blanket thrown across his shoulders, and lays chilling palms on his buckskin leggings. Joseph holds a Winchester across the pommel in front of him. But this gun, after 1,300 miles, has falled him as he knew it would.

The pitiful cluster of Indians comes to a halt before an uneasy lineup of blue-uniformed officers near the crest of the hill. Heavily, Joseph swings off his pony. He pulls the blanket closer about him, steps forward, and with a sudden gesture offers his rifle to bushy bearded Gen. Oliver Howard, commander of the Department of the Columbia. Howard motions toward another man, Col. Nelson Miles, nervously stroking a thick black mustache. Joseph hands the gun to Miles.

Gray fingers of dusk slide across the snow as Joseph, shifting his blanket to leave his right arm free, turns back to Howard and speaks in the soft guttural of the Nez Perce language.

"Tell General Howard I know his heart,"

Interpreting is buckskin-clad Arthur Chapman, a French halfbreed from Idaho, serving as a volunteer scout with Howard's forces.

"What he told me before I have in my heart. I am tired of fighting."

Miles fondles the rifle. Joseph speaks slowly. A young lleutenant, Charles Erskine Wood, scribbles on a paper pad as Chapman translates:

"Our chiefs are killed. Looking Glass is dead. The old men are all killed."

The last touch of sunset glows against Joseph's bronze checks. From ragged hills behind the officers, army campfires flicker through the twilight. Some of the Nez Perces, shivering under their tattered robes, already are drifting toward them.

"It is the young men who say no or yes. He who led the young men is dead."

This refers to Ollokot, Joseph's younger brother, who was shot while firing from behind a boulder 4 days before.

"It is cold and we have no blankets. The little children are freezing.'

Joseph pauses; the interpreter falls silent. A momentary turmoil mixed of the thunder of battle, the moonlit sheen of Wallowa Lake, the heartache of surrender and the blue-lipped children grips Joseph's mind.

Many years and many miles have brought

him to this place.

In the beginning, which is to say when Lewis and Clark stumbled across them on the Clearwater River the Nez Perces were a strong, handsome tribe scattered through a vast mountainous area now encompassing north central Idaho and portions of Washington and Oregon. They were a vigorous people who won the unrestrained admiration of virtually every white they met until it came time to relieve them of their lands.

Even then a majority of the Nez Perces, conditioned by more than half a century of peaceful relations with trappers and early homesteaders, accepted the boundaries of a reservation which pretty well coincided with their natural habitat. But five bands living outside the reservation, reluctant to donate their lands, became involved in war. During the explosive summer of 1877 less than 200 warriors fought four pitched battles and many lesser engagements against an aggregate of more than 1,400 regular army troops and volunteers. Burdened by their women and children, their sick and wounded, the Nez Perces retreated some 1,300 miles, constantly out-maneuvering strong combat troops, and failed by an easy 2 day's march

to reach the sanctuary of Canada. Chief Joseph was the leader of one of these bands. He was not the red-skinned military genius so frequently portrayed. Only 37 during the summer of the campaign, he shared in military councils but accepted the strategy decisions of older chiefs and of the great tribal warriors who had crossed Bitterroots to hunt buffalo and kill Blackfeet. These were the real leaders of

the Nez Perce campaign.

Though he fought as a line soldier in at least two battles, Joseph's usual role was to safeguard the village. He was a man who loved peace. Almost alone among the chiefs, he knew Indians in the end could not stand off the white armies. He was a man of dignity and wisdom beyond his years, and of compassion and a deep-rooted concern for his people. Far more comparable to Lincoln than to Napoleon, Joseph in the twilight of his life became also, historically, the most famous person ever to reside in Okanogan County. That is why we have written this

The trail which led Joseph to his surrender near Montana's Bear Paw Mountains began in the Wallowas of northeastern Oregon. The Wallowas are as beautiful a country as any on earth. Had you approached them from the north, anytime before highways and fences slashed up the landscape, you would have passed through a sweeping ocean of gently rolling bunchgrass which, to the south, seemed to wash against a long, low. black ridge. As you drew closer, the ridge would appear to spring alive. Forested hill-sides would leap above the plain. Still higher, sweeping slide areas flanked by granite outcroppings would rise to meet the snowfringed summit lines of the Wallowa mountains. As you reached their base, a lake would spring out to meet you, its green waters curving gently from the last of the rolling bunchgrass into the sharply rising slopes of the mountains. Within the Wallowas' jumbled battlements, sunlit streams cascaded then as now across grassy slopes to slip into the shadows of pine and tamarack forests.

Here in a veritable paradise lived Old Chief Joseph, young Joseph's father, and his band of Nez Perces, perhaps 60 adult men who with their women and children numbered something less than 300. In spring, summer, and fall their buffalo-skin tepees could be found clustered along the lake shores or pitched on higher slopes. Their thousands of horses, representing the band's wealth, grazed through the luxuriant bunchgrass. Squaws gathered the sweet root of camas, and aiseth, spatlam, poh-poh and mesini. They filled skinbags with berries in the fall and smoked venison and salmon, continually hoarding foodstuffs for the winter they would spend in the low, sheltered valley of the Imnaha.

The older boys and men tended and broke their speckled, white-rumped ponies. They hunted and fished, splashed in the lake, and kept an eye on their beef cattle. Occasionally some of old Joseph's band joined other Nez Perces in crossing Lolo Pass for buffalo hunting in the Yellowstone River country of Montana. While the Nez Perces lived in peace with their close neighbors, the Montana forays usually inspired entanglements with the Blackfeet or Crows, or allied with the Crows against the Snakes Sloux. Except for the Comanches, the lithe, wonderfully-mounted Nez Perces had no equals as warriors among all the Indians of North America. Stripped to breechcloths and moccasins, they fought splendidly with bows and arrows, knives, lances, and rawhide shields, rocks tied to the end of wooden warclubs, and a scattering of flintlock

Early in the last century the first of the fur traders drifted into the northwest. But the Nez Perces, having open-handedly wel-comed the Lewis and Clark expedition as it stumbled on half-rations out of the rocky fastness of the Bitterroots, continued to greet whites with an unconcerned good will. In 1837 they gave a tumultuous welcome to tall, dour Henry Spaulding, a Presbyterian missionary who settled at Lapwai in central Idaho.

Hundreds of Nez Perces stumbled over each other in a wild rush to embrace Christianity. They did this with no thought of purifying their souls, but because it seemed sensible that adopting the white man's religion was step No. 1 toward benefiting from his other virtues-namely, beads, cloth, iron cooking utensils, matches, and repeating Winchesters. Before long perhaps two-thirds of the Nez Perces sketchily professed themselves to be Presbyterians. Old Joseph was

one of Spaulding's first converts.

By the middle 1850's the scattering of fur traders had been succeeded by a swelling torrent of farmers, miners and tradesmen. Settlements blossomed into small Newly created Washington Territory sprawled from Puget Sound to the Rockies. Its first Governor, flamboyant Isaac Stevens, promptly set about clarifying relations between Indians and purposeful whites who wanted the same land. After a whirlwind round of treaty-making with coastal Indians, he headed in late-May of 1855 for the lush meadows where Walla Walla now stands to settle with the interior tribes.

The first natives to arrive at Stevens' council were the Nez Perce-2,000 warriors, naked. plumed and painted, flashing their shields and chanting their songs, sweeping into the meadows astride belled and beaded horses smeared with vermilion and white clay, The white stared awesomely at these fabled mountain tribesmen, the most powerful na-tion in the northwest. Soon their conical tepees sprang up among clumps of cotton-Later the Cayuses, Walla Wallas, Umatillas and Yakimas rode in. Spouting oratory on every hand, the conference began,

Stevens wanted the Indians to sell part of their lands to the U.S. Government. The rest would be set aside as reservations. Often condemned as robbery, reservations actually were the only answer to an intolerable situation which saw the Indians' roving hunting economy usurp too much land in the face of pressures from a stronger agricultural society. Misunderstanding, corrupt agents, and whites unwilling to wait were to cause most of the trouble.

The misunderstanding began immediately The Indians could not conceive of selling land like a bolt of calico. No one owned earth. It was provided to live on. When man died, he relinquished its use. The parley soon slipped into an empty-worded abyss:

General Palmer, Oregon Indian commissloner: "Why do we offer so much for your Because our Great Father told us to take care of his red people."

Young Chief, of the Cayuses: "I wonder if the earth is listening to what is said."

Palmer: "Your people have sometimes done wrong. Our hearts have cried. But if you will try to do right we will try to forget, etc., etc."

Owhi, Umatilla chief: "Shall I give the land which is a part of my body and leave myself poor and destitute, etc., etc."

At length Stevens induced a number of chiefs to sign his treaty. A tremendous area from the Bitterroots to the Wallowas was set aside as a Nez Perce reservation. Since his homeland was included, Old Joseph signed. For the rest of the land, Stevens promised annuities of about 10 cents an acre. Congress ratified the treaty but failed to appropriate funds. Anyway, the peacemaking had come too late. Irritations between In-dians and whites increased. Three months after the Walla Walla parley, the Northwest was aflame with Indian war. After bitter fighting, the military's better organization and longer range rifles crushed the revolting natives. Among the treaty tribes, only the Nez Perces refused to take up arms against This was because of their tradithe whites. tional friendship and (more important) because their lands were as yet unmolested. But it meant that in the end, they would have to fight alone.

The beginning of the end occurred one sweltering afternoon in the summer of 1860 when a white man, sneaking into the Nez Perce Reservation, panned colors from "Oro Fino" creek. As though a dam had burst, miners poured into the Snake River country. Lewiston sprang up with a brawling popula-tion of 1,200. At about the same time, the first few settlers drifted into the Wallowas. Responsive politicians saw immediately the Ncz Perce Reservation was far too large. In 1863 a second council was called at Lapwai.

By now the great Nez Perce Nation was sharply divided. About a third, led by a chief named Lawyer, were willing to deal with the Government because they already lived within the smaller reservation now proposed—an area in north central Idaho less than one-sixth the size of the 1855 reserve. Most of them were Christians. The rest of the Nez Perces would have to leave their ancestral homes. Moreover, many of them had become "Dreamers"-adherents to a newly sprung religion based on a mystic spiritual fusion with the soil. More violent tenants foresaw cataclysmic eruptions and an overwhelming resurrection of all dead Indians combining to wipe out the whites and restore all lands to their native owners.

At Lapwai the Dreamer chiefs, one by one, refused to surrender their homes. Old Joseph, who thought in 1855 he had saved his million high grassy acres forever, re-fused in time even to listen to the white commissioners. He had abandoned Christlanity. With his heir-apparent, Young Joseph, now a strapping 23, he led his band back to the Wallowas even as Lawyer, promised \$1,500 and a framehouse, approved the reduced reservation on behalf of all the Nez Perces. This procedure, as even the whites understood by now, was poppycock. Each Nez Perce band was entirely independent. One Nez Perce chief could no more sign away another's land than he could sell horses owned by Modocs in southern Oregon.

So a decade passed. Old Joseph's band continued living in its mountain paradise, the young braves racing their ponies along the shores of Wallowas Lake within sight of the closest white stockmen. In 1873 President Grant agreed the Indians had never relinquished title to the Wallowas. He set them aside as hunting grounds for the "roaming Nez Perce." Two years later he corrected this mistake. The Wallowas again were opened to entry.

Friction increased between the Joseph band and the settlers whose outraged protests had clarified the President's thinking. Perhaps 20 or 30 Indians were murdered by whites. Not once did the Nez Perces retaliate. Old Joseph had died in 1872; his son, becoming chief, knew white juries would laugh at Indians seeking justice in court. Night raids outside the law promptly would bring in troops to deprive the band of what few rights it had left.

In November 1876, the younger Joseph was summoned to confer with a five-man commission at the Lapwai agency. Only 5 months previously Custer's command had been wiped out at the Little Big Horn. Settlers' greed for Indian land and their fear of bloody reprisals had boiled into a pressure even the most understanding white officials could not withstand. After hearing Joseph's dignified oratory the commission recommended that all the nontreaty bands (those which had not signed the treaty of 1863) be removed, by force if nec-

essary, to the reduced reservation.

The following spring, most of these bands Were called again to Lapwal. They found the Army had taken over negotiations previously handled by the Indian Bureau. In charge of getting things done was a high-ranking Civil War veteran, Gen. Oliver Howard, who had lost his right arm at Four Oaks. Howard was a man who attracted both derision and respect by studying his Bible under a sputtering candle until late at night in his campaign tent. Now he made it clear the Great White Father's patience had drained away. All of the Nez Perces would have to move onto the reservation. Somewhat surprisingly, the nontreaty chiefs gave in. They loved their homelands. But even more they disliked the idea of becoming involved in a full-scale war against white armies.

The chiefs rode about the Idaho reservation, selecting sites, and just before leaving were stunned by an order to return on a permanent basis within 30 days. To Joseph, who had the largest herds to round up and the longest distance to travel, this came as a particular shock.

Some of the younger orators in Joseph's band urged resistance. But their troubled leaders saw no course except bowing to the inevitable. For the last time his braves rode through their beloved Wallowas, from the glacial valleys below Eagle Cap to the sheltered breaks of the Grand Ronde and Imnaha, searching for horses and cattle. They had time to collect only a fragment of their herds. Whites helped themselves to the rest. Dozens of horses and virtually all the remaining beef cattle were drowned as the band struggled across the rushing brown torrent of the Snake River at the peak of its springtime fury.

Only a day or two before Howard's deadline. Joseph's village joined several other nontreaty bands just outside the reservation boundary. Resentment was running high. Younger braves talked openly of war. But most of the chiefs would have none of it. "In a day or two," they said, "we will move into our new homes."

But first, Wahlitits of White Bird's band had a score to settle. Three years earlier a white settler had shot his father in an argument over land. Now, on the morning of June 13, 1877, Wahlitits and two companions slipped out of camp to avenge the murder. The suspect was not at home. The three braves, bearing the destiny of 700 Nez Perces, rode about much of the day. That evening they approached a Salmon River cabin occupied by Richard Divine, an elderly farmer who also had killed a Nez Perce, and frequently sicked his vicious dogs on others. The Indians shot Divine. A few hours later they ambushed three whites wondering whose horses had suddenly appeared in their hayfield.

As soon as word of all this reached the Nez Perce camp, 16 more braves hungry for revenge boiled out to join the original 3. The party killed a few whites, then found some whisky and got rough. They killed more whites, raped several women, plundered some stores, and finally hammered victoriously back into camp. Joseph had been butchering beef across the Snake. He was back now, but too late. All the chiefs knew their self-appointed task force had gone too far. Soon troops would arrive to punish the entire tribe. In fear and confusion, the nontreaty Nez Perces turned away from the reservation, moving south to pitch their tepees not far from the Salmon River at White Bird Canyon.

Meanwhile, stark terror gripped the white settlements in central Idaho. The slightest cloud of dust might be raised by Indian war ponies. Farms by the score were abandoned. As refugees whipped their mules into barricaded towns. James W. Poe, of Mount Idaho, wrote the Governor of Idaho that two or three hundred Indians were continuing their bloody raids. J. P. Vilmar, of Lewiston, informed the mayor of Portland: "They have massacred 30 or 40 men. women, and children; for humanity's sake * * * send arms with ammunition."

While actually 19 Indians had claimed about 16 victims, the letter-writers' wild-eyed excitement was matched by General Howard's cool underestimate of the situation as from Lapwai he dispatched Capt. David Perry with 99 cavalrymen to deal with the outbreak, and informed his superior: "Think we shall make short work of it."

Alexander Miller

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. GUBSER. Mr. Speaker, Stanford University and the Nation has lost one of the great theologians in contemporary America in the death of Prof. Alexander Miller at the age of 51. He was greatly loved in the Stanford community and throughout the Nation. As President J. E. Wallace Sterling, of Stanford, said:

His scholarship was of high quality, his interest in undergraduate education and in the lives of the students was lively and constructive. His sympathy for his fellow man was ready and warm. His resources of friendship were abundant and were brightened by gifts of wit and speech.

Under leave to extend my remarks I submit herewith an editorial from the Stanford Daily:

ALEXANDER MILLER

It is difficult to write a tribute befitting Alexander Miller, for one does not know where to begin. His life was filled with an eager interest in students, a constant striving for academic knowledge, a heartfelt desire to make friends and a clear devotion to his faith.

to his faith.

His many friends and acquaintances at Stanford and all over the world will retain a warm memory of a man whose life was well spent and intelligently directed.

President Wallace Sterling has expressed an extremely appropriate encomium to Alexander Miller:

"His contributions to the Stanford community were manifold. His scholarship was of high quality, his interest in undergraduate education and in the lives of the students was lively and constructive. His sympathy for his fellow man was ready and warm. His resources of friendship were abundant and were brightened by gifts of wit and speech. Stanford's strength as a university has been diminished by his passing. Stanford men and women have suffered a personal loss."

Observance of Armed Forces Day

EXTENSION OF REMARKS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. CHAMBERLAIN. Mr. Speaker, the 11th observance of Armed Forces Day was recently celebrated here in the United States and people throughout the country were given an opportunity to visit many of our military bases and view our highly trained military personnel. I feel we in America can be justly proud of the men and women serving in our armed services and in this respect I wish to include an appropriate editorial which appeared recently in the Flint Journal entitled "Observe Armed Forces Day by Resolving To Keep Faith." The article follows:

OBSERVE ARMED FORCES DAY BY RESOLVING TO KEEP FAITH

Saturday is Armed Forces Day, a time to pause to remember the many Americans who have died in war and the many who today are serving in uniform to help make sure their lives were not given in vain.

Most of us find it difficult to realize that 15 years have passed since the World War II

shooting stopped in Europe.

We are now farther from that fighting than older Americans were from World War I when Franklin D. Roosevelt first took office as President in March 1933.

There are some 40 million more Americans than there were on VE-day in 1945. In many places the face of the Nation has almost been made over. Millions of new homes stretch the limits of our urban areas to constantly wider dimensions. Factories have expanded and new businesses mushroomed.

At the end of World War II, only 22 million passenger cars traveled our streets and highways. Today the total is close to 57 million and our country is crisscrossed with an ever-growing network of superhighways.

All of this growth and development has brought with it new economic, social, and political problems. We grow unevenly and lag is apparent in many essentials such as schools, sanitation, roads, housing, and hospitals. Crime besets us in frightening volume.

But looming larger than all of these things on this Armed Forces Day is the tragic fact that we have not realized the

kind of peace we thought we earned in World War II. While we are not engaged in a shooting war, we live in constant fear of one. In 1945 we talked hopefully of going back to 20 billion dollar budgets, but today our national defense budget alone costs 41 billion yearly.

In major areas we do not even have peace

In major areas we do not even have peace treatles, and in some cases where we do they

have not been honored.

We and the Russians, our World War II allies, stand opposite each other building the weapons of disaster for all mankind. Never have our two countries been at such odds. Seldom in the last 15 years has the threat of war hung so heavily over our heads as it has this week.

This does not call for pessimism and despair. Rather it is time to take a realistic look at our position as the leader of free peoples everywhere and to pledge ourselves to an even more determined effort to preserve that freedom wherever it exists.

We must continue to strive for a peaceful settlement of our differences. The alternative is too grim to do otherwise. But we have a sacred trust to insist upon an honorable peace that insures freedom as we know it.

In World War II we crushed tyrants and militarists in Germany, Italy and Japan. But into the European vacuum left by the German-Italian collapse rushed the Soviet Union. And in Asia, Red China fashioned another totalitarian triumph from the raw materials of corruption and human discontent.

The war that was fought to save freedom did indeed preserve it here and in many other places. Yet 15 years afterward, haif the world's population moves in bondage behind the iron barriers of communism.

The 400,000 Americans who died in World War II did not die in vain. But every American today, from the President to the youngest citizen, must work with energy and purpose to assure that we survive a greater threat than the one they put down with their lives.

To this end should we dedicate ourselves this Armed Forces Day.

Long Beach Federal Savings & Loan Association Versus the Home Loan Bank Board

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. HOSMER. Mr. Speaker, I call attention to a bitter struggle that has been going on in my constituency for some 14 years between the Federal Home Loan Bank Board and the Long Beach Federal Savings & Loan Association. The matter has received widespread local publicity. It has caused constituents of mine who have confidence in the local institution and its management, as well as the general public, considerable worry and annoyance. Certainly, a controversy carried on this long, and in the manner in which it has been conducted, does not reflect credit on the Federal agency involved.

For the second time in 14 years this savings firm has been seized by action of the Home Loan Bank Board. The first seizure was condemned by a congressional committee as a "vicious abuse of power" and 20 months later, after changes in the Bank Board, the association was returned to its local management. However, many outstanding issues created by the original seizure have never been settled. They have dragged through the courts for years at great litigation expense and continued uncertainty. If anything, this course of events has compounded rather than clarified the situation.

A feeling has generated that the Board's recent reseizure of the institution stems more than anything else from a continuously increasing hostility by Bank Board personnel growing out of frustrations stemming from repeated setbacks by rulings of the courts. The reasons given by the Bank Board supporting exercise of emergency powers to seize the institution for the second time appear to bear out such an assessment of its actions. These allegations, some 17 in number, were each matters which, if the Board were on its toes, doing its job. would have been corrected administratively in regular course rather than being allowed to accumulate. The fact that such regular action in due course was not taken by the Board lends credence to the association management's contentions that there is nothing to them and that it is being subjected to harassment. Whatever the actual situation may turn out to be, the Board cannot escape responsibility either for nonaction when it should have been acting, or for acting in an emergency way when it had no cause for so doing.

Currently the association's management is in court seeking to force the Home Loan Bank Board to bond the supervisory representative it placed in the institution in an amount reasonable to the value of the assets involved in the seizure. In ruling on a question of who should be of counsel in the case, California Superior Court Judge John F. McCarthy made the following philosophical observation:

The court is a representative of our way of life in a very real sense. It is the means whereby our Constitution and our laws of all kinds are enforced. They are enforced as against individuals. They are enforced as against the public and all agencies of the public. In other words, whatever the law is, it is the duty of the court to enforce it, and that it must do impartially and as accurately as possible, of course. The courts are entitled to respect only if they see to it that the law is enforced and that the founts of justice aren't corrupted.

Now, I think that the other branches of government have a duty of fairness, obeying the law, and seeing to it that our laws are not violated or evaded. I don't think that any public organization should ever place itself in the position so that its motives can be subject to any criticism, and the courts should be in the same position.

The following story in the Long Beach Independent newspaper for May 19 explains the question as to who should properly be of counsel in the case that was under consideration, together with Judge McCarthy's ruling on it against the Home Loan Bank Board and favoring the association's deposed management:

SEIZED L. B. FEDERAL SAVINGS WINS STATE COURT SKIRMISH—JUDGE RULES FIRED COUNSEL STILL ON JOB

(By Don Maddock)

An alleged attempt by Federal agencies to control both sides of long-standing multi-million-dollar litigation involving Long Beach Federal Savings & Loan Association was blocked in superior court Wednesday.

Judge John F. McCarthy ordered C. E. Ault, supervisory representative in charge of the firm since it was seized April 22, made a party to the litigation, and also refused to exclude attorney Charles K. Chapman from representing the firm, although he was fired by Ault April 29.

by Ault April 29.

"It seems perfectly clear to me that the Federal Home Loan Bank Board has the power to completely dominate activities of the San Francisco Home Loan Bank (plaintiff in the lawsuit involved) and also those of Mr. Ault," Judge McCarthy observed.

"I am not ascribing to the board or San Francisco bank any improper motives. However, both of them are public bodies, and should conduct themselves in a manner that their motive cannot be subject to any just criticism."

Judge McCarthy ordered Ault included both as a codefendant in the San Francisco bank's action against the local firm, and as a cross-defendant in Long Beach Federal's counter-action.

Chapman sought the order. Atty. Sylvester Hoffman, representing the San Francisco bank, answered that Chapman had no standing to make the motion.

Hoffman pointed out that Ault has succeeded to all powers of officers and managers of the local firm, and that Ault had dismissed Chapman.

"There are a few technical reasons why this relief should be denied," Judge McCarthy answered.

"But in court the skids are not supposed to be greased. Both sides are entitled to have their cases presented.

"If there is a good defense (by the local firm) and because of this seizure this defense is not urged, would it not be a fraud on the court?

"Inherent powers of the court to see that every party has his day in court demand that Mr. Ault be brought in, and demand that something be done to see that merits of the cross-complaint (filed by Long Beach Federal) are fully and vigorously presented.

"The bank board should not be placed in the position of telling the association it may not act, and then refusing to act itself.

"This ruling is not an accusation of any kind, but the case poses a situation which should not exist.

"It comes a little too close to a case of a plaintin suing himself. I think it is the duty of this court to see that no such possibility shall exist, whether the threat be real or not."

The San Francisco bank mainly seeks confirmation of its foreclosure of about \$7 million in Government bonds, matured interest coupons and cash of the Long Beach firm.

The association, in return, seeks redemption from the foreclosure and damages, totaling about \$10 million.

The dispute arose after the bank board, in 1946, appointed a conservator for the local firm.

Notes he signed in the local firm's name, and its bonds, deposited with the San Francisco bank as security were bases of the counterclaims. Spying and Blundering

EXTENSION OF REMARKS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1960

Mr. ULLMAN. Mr. Speaker, my colleagues may be interested in the following editorial which appeared in the Wallowa County Chieftain, a weekly newspaper published at Enterprise, Org. It it further evidence that the people of this Nation have questions they hope to see answered regarding the recent U-2 incident:

SPYING AND BLUNDERING

The business of international spying has been going on for a long time, but it is doubtful whether any country has ever bungled in the field quite as badly as the United States did in handling the recent espionage case involving the shooting down of one of our intelligence planes in Russia. We could hardly have made more of a mess out of the situation if we had tried.

In the first place it is doubtful whether any new information which Lt. Francis Powers, the pilot, could have obtained would have warranted the risk involved in view of the imminent summit conference at Paris to iron out some of the worst threats to Peace in the relations between this country and its allies' and Soviet Russia. If spying was necessary it might have been stopped long enough so that no unnecessary road-blocks would have been thrown in the way of peaceful talks at this summit meeting.

Espionage is always a dirty business and is carried on outside the moral law and the national and international codes. The only crime in the business is in being caught. But generally spying is of the cloak-and-dagger type which is carried on by civilians in such a way that the government involved can disclaim knowledge of the act. In the Powers case, however, the Government of the United States was caught redhanded.

Khrushchev, by delaying announcements of the capture of Powers and the recovery of his equipment, was able to lead the U.S. State Department into some silly statements which compounded the crime and our embarrassment. At first it was officially reported that probably an American weather observing plane had strayed across the border. But when Khrushchev came up with the reconnalssance plane the official version was changed to indicate that Powers may have had an oxygen failure in his equipment and fell unconscious as the automatic pilot took him deep into Russian territory against his wishes.

Then Khrushchev finally came forward with the plane, its equipment, and even Lieutenant Powers' version of the flight and the stories and make believe had to be dropped and the spying openly admitted. But by this time Khrushchev had turned the whole epizode into a neat bit of propaganda.

The State Department's lame statement that we had to send spies into Russia because they wouldn't tell us their secrets, came as about the weakest part of the whole ridiculous business. No country is giving out its military secrets, and it is absurd to say the Russians are responsible for the spying because they hide things.

Finally, when the U.S. State Department had demonstrated a perfect record for putting its foot in its mouth every time it opened it for a statement, it kept its blundering status complete by announcing that appling by means of planes over Russia had

been going on for a long time and would continue. This statement served no purpose other than to further inflame the Russians and to give our allies the jitters.

If the Powers flight originated in Pakistan and was to end in Norway as the Russians claim, and if this was arranged without the knowledge of Government officials in either Pakistan or Norway, then we were certainly not playing fair with these two countries. It is hardly a good-neighbor policy to use the home of a friend as a base for illegal operations without that friend's consent or knowledge.

Probably a lot of lies will be found in Khrushchev's statements about the case. It is already being questioned whether a flight from Pakistan to Norway with a plane of the U-2 type was possible, whether the plane could have been tracked by radar, and whether it could have been shot down from 12 miles up with a single rocket and the pilot and all his photographic equipment remain intact after plummeting to earth from this height. There may have been a lot of faking going on by the Communists, but the mistakes of the United States will not be covered up by this Soviet fakery.

The average person may excuse the spying (although baffled at the timing) but he will wonder why it wouldn't have been better to have made a simple admission of it without elaboration and without lying.

Congressman Chester Bowles of Connecticut Interviewed on "Meet the Press," May 8, 1960

EXTENSION OF REMARKS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. BRADEMAS. Mr. Speaker, under unanimous consent I include in the Record the transcript of a television program on which our distinguished colleague, the Honorable Chester Bowles, of Connecticut, was interviewed.

Congressman Bowles appeared on the National Broadcasting Co. program, "Meet the Press," on May 8, 1960, and was questioned by Peter Lisagor of the Chicago Daily News, Chalmers Roberts of the Washington Post, John Steele of Time-Life, Inc., and Frank Bourgholtzer of NBC News. Moderator was Ned Brooks

The transcript follows:

TRANSCRIPT FROM "MEET THE PEESS"

Announces. Now "Meet the Press," produced by Lawrence E. Spivak. Ready for this spontaneous, unrehearsed conference are four of America's top news reporters. Their questions do not necessarily reflect their point of view; it is their way of getting a story for you.

Mr. Brooks. Welcome once again to "Meet the Press." Our guest today is Congressman Chestra Bowles, of Connecticut. He recently was chosen as the chairman of the committee which will write the platform for the 1960 campaign. Work on the platform already has begun with a series of regional meetings. Republican leaders this past week opened an attack on the makeup of Congressman Bowles' committee. They said it is dominated by radicals of previous campaigns. Congressman Bowles has been

mentioned as a possible dark horse candidate for President, but he has declared his support for Senator John Kennedy. He is serving as an adviser to Senator Kennedy on matters of foreign policy.

Congressman Bowles was the wartime Administrator of Government price controls. He later was elected Governor of Connecticut, and he served as our Ambassador to India. He was elected to Congress in 1958. His books and articles on both foreign and domestic affairs have been widely quoted.

Mr. Bourgholizer. Mr. Bowles, if you were foreign policy adviser to a President, rather than to a candidate, in this situation where an American pilot has been shot down by the Russians and has admitted being a spy, would you advise just admitting that he was a spy as has been done?

Representative Bowles. You have asked

Representative Bowles. You have asked a very tough one. It seems to me that the administration did about all they could with a very, very difficult, very unpleasant and highly embarrassing situation. It is pretty clear that Mr. Khrushchev knew what was going on. He appears to have the evidence with which he could confront the world and presumably persuade the world. I think it would have only made a bad situation—and I think it is a very bad situation—worse if we had tried to cover it up.

Mr. Bourgholtzer. On the same question

Mr. Bourgholtzer. On the same question there are a lot of aspects, but I am wondering particularly what your viewpoint would be, thinking of the upcoming administration, on the point of the President being unaware of such an activity, as apparently is the case in this incident. Do you think the President should be kept purposely unaware of certain Intelligence operations?

Representative Bowless. Let's start with the

Representative Bowles. Let's start with the fact that I believe this will go down in history as probably the most embarrassing and in some ways shocking, occurrence in the last 7 or 8 years. It is terribly embarrassing, difficult; it has put us in a very bad situation before the world. We are going to hear a lot more of it.

I wish I were talking about it 2 or 3 days from now when perhaps we will have a bet-ter chance to settle down and think it through, and certainly anything I say I want to be sure is very responsible and thoughtful, because no one has any desire to make this worse, certainly not for partisan reasons. But it seems to me the whole situation has placed the State Department in the position of having deliberately told a falsehood. We assumed they did not know the actual facts. that these facts were simply given them. As you go on to say, the President himself is placed in the position of not appearing to know a very major development in regard to our foreign policy. The Soviet Union was encouraged to be suspicious of us. They are already very suspicious on this whole matter of controls inspection. They have always charged that the reason we want this inspection is for spying work and espionage generally. They also have been granted a beautiful opportunity to use this, and they will use it certainly very adroitly to embarrass us and to weaken our already weak position as we approach the summit. And the whole world has been given a very deep contrast between our apparent desire for peace, our desire to try to negotiate a peace, while carrying on this kind of activity almost simultaneously. I think it is a very bad situation.

Mr. Steele. I want to get one thing straight. Are you criticizing the activities of the plane, or are you criticizing the pilot getting caught?

Representative Eowers. Let me say this: that I don't think any one of us, as simply an outsider and a newspaper reader, as I am, can know what is essential here in the way of espionage. We all are realists. We all know that this is a difficult and complex

world. We know we are at a disadvantage. that the Soviet is a closed police state and has certain very great advantages over us. However, it seems to me that that is not really the point here. The point is the This may be necessary under certain circumstances, depending, of course, on the technical problems, of how great our lack of knowledge really is. But the point is, we are preparing for a summit meeting. The whole history of the world may depend upon our ability to negotiate with the Soviet Union, to talk with them on a basis of mutual trust, or at least some greater degree of mutual trust. By timing this par-ticular excursion at this particular time, we have certainly gone a long way to undermine that hope.

Mr. STEELE. Let's see if I understand. You mean these activities are all right except when we have an international meet-

ing, is that correct?

Representative Bowles. I don't know that they are all right at all, because I don't know the inside story of how much information we have or what we lack or what risks should be required to get it. I would assume that we should not do this sort of thing for a marginal gain. Only if the gain was so very, very vital to our security that it could be justified on the basis of our national security to the utmost degree. But the point is that here we are in a very delicate position, and certainly this would be a time to be far more circumspect than obviously these people have been. I think they have committed a very gross case of misjudgment, and I think it is highly reckless, and I think it is dangerous and hurtful.

Mr. STEELE. You are the fereign policy adviser to Senator Kennery and presumably will become Secretary of State if he is

elected President.

Representative Bowles. I wouldn't presume that for one minute.

Mr. STEELE. You would not presume it? Representative Bowles. No. There will be

lots of possibilities.

Mr. Steele. There has been talk of keeping the candidates informed about developments in foreign policy. Have you been kept informed as to these flights, either as Senator Kennedy's foreign policy adviser or as a member of the House Foreign Affairs Committee?

Representative Bowles. No, I have not heard of them, I have not been kept advised in any way, and I doubt that he has. I am very sure that none of us have.

Mr. ROBERTS. I would like to turn to politics for a minute. Everybody says you are a darkhorse in the Democratic outlook. It seems apparent or possible that the convention may be deadlocked in Los Angeles for some time. If that happened, and if there was a turn to you as a possible compromise candidate, would you accept? Representative BOWLES. I think this talk

Representative Bowles. I think this talk of my being a darkhorse is rather farfetched. I am grateful for the friends I have had around the country who have advanced it, and I have been flattered by it, and naturally it is pleasant to know that what I have been trying to say over a long period of years has at least taken hold with some people. However, I have never taken it seriously. I have done all I can to discourage it. I am for Jack Kennedy, first, last and always. I am sticking right thoroughly with him, and I think he is going to get nominated.

Mr. ROBERTS. As you would say, if I was a witness on the Hill, that is not a responsive answer. Can't you tell me yes or no, if

drafted would you accept?

Representative Bowles. It is such an impossible situation I can't even visualize it. I was brought up under F. D. R. He said never answer questions that have that much "if" in them. They are too far and too remote.

Mr. ROBERTS. Let me turn it around the other way: Will you make a Sherman statement that you wouldn't accept it if it were offered?

Representative Bowles. I think I would look very silly and presumptuous if I did.

Mr. Lisacon. I would like to ask you in connection with an earlier question, do you think the Democrats ought to be kept informed on basic foreign policy developments, specifically on the nuclear test suspension talks? Won't the Senate have to ratify any treaty we might agree to, and do you think the Senate members, the Democratic members, the important ones, are being taken interest accountil authors any other accountils authors any other accountils.

to those councils sufficiently—
Representative Bowles, No. I don't. think it is very bad. Let's go back to 1918: In October 1918 Woodrow Wilson made a very partisan appeal for the election of a Democratic Congress. He got instead a Republican Congress elected in the bielection, the off-year election, of 1918. He then left 3 weeks later for the peace conference in Paris taking with him only one Republican who was so far down the line in Republican circles that people didn't even know he was While I am a tremendous a Republican. While I am a tremendous admirer of Mr. Wilson, and I feel he is one of the really great Americans of all times, I think that was an abysmal political mistake. It led the way to a good deal of the misunderstanding and challenge and difficulty and final frustration in the U.S. Senate when we falled to get the Treaty of Versailles and the League of Nations through. I might say that I think this administration is making the self-same error.

Mr. Lisagor. Would you say that they ought then to take Democratic Senators to

the summit conference?

Representative Bowles. I certainly think they should. I think they ought to be kept more carefully informed. We have not had honest bipartisanship in these last 7 or 8 years. I think it is dangerous not to have it. I think the Democrats under the circumstances have behaved with a good deal of responsibility, in the absence of real bipartisanship.

Mr. Lisagor. On another point, in Milwaukee last night I believe you made a speech blaming a good deal of Mr. Khrushchev's bitter blasts at the United States recently on what you called China and the extreme rightists within the Soviet Union, suggesting, according to the accounts I read, that these people want to torpedo a summit conference. How do you square that kind of a statement with the general belief here in Washington that Mr. Khrushchev needs peace and needs certain relaxation in order to get his 7-year plan to work?

Representative Bowles. My statement as it was quoted—I haven't seen the paper—that wouldn't be quite accurate if that is the way

it appeared.

What I asked was the question, How much influence have the Chinese had in this situation; how much influence does exist among the old Stallnist regime within the Soviet Union? I asked that as a question, and I think it is a very proper question, too. Chinese have always timed a lot of their in-transigence in the Far East, Quemoy and Matsu and the rest, for just the periods when we were trying to negotiate and talk with the Soviet. It is my guess that Mr. Khru-shchev would really like to try to develop an easier atmosphere, here. I felt this strongly when I saw him and talked with him a little over 3 years ago in Moscow. I had a long 3-hour talk with him, and I came out of it quite convinced that he wanted a détente: he wanted to see the situation ease; he felt the need of it for his own country, but he was highly suspicious and feeling his way. It would seem to me clearly that this is not in the interests, necessarily of the Mao Tsetung government in Peking. They naturally want to keep the cold war between the

Soviet Union and the United States, just as active and vigorous as they possibly can, because this assures them of a flow of material and loans and all the things they need from the Soviet Union. I would assume that there is quite a clash here, at least a potential clash, between Chinese Communist interests and the Kremlin's interests.

Mr. Lisagor. But do you not believe that Mr. Khrushchev is secure enough today in Russia so that he can move on toward relaxation if he so chooses at a summer conference?

Representative Bowles. I don't think we really know. I hope so, I visited Esignade this November. I wanted to go there to talk to some of the Yugoslavs who often follow pretty much the Soviet line. For instance, in regard to Berlin, their line is almost identical with the Soviet. But they do have some insight on what is going on in the Soviet Union and also in China. I wanted to try to probe this question with them. There is the general feeling there that Mao Tse-tung's government in Peking had some contacts and some hope for support of an extreme position from certain elements in the Soviet military. I don't think they knew it for a fact, but they are inclined to feel that this was the case.

Mr. Bourcholtzer. I'd like to ask a question, Mr. Bowles, directed to your role as chairman of the platform committee. You have spoken in many of your speeches about the challenge of Soviet economic ability and their production and so on. In translating this into an American program, would you suggest that the Russians have developed the art of economic planning to a point that we should perhaps copy their planning methods?

Representative Bowles. I don't think that is necessary. I am concerned about our slow lack of growth. Indeed, if you were to ask me what I thought was the single most important question before the American people today it would be our capacity to grow at a much faster rate without inflation, with stable prices. I feet if we can develop our growth rate to around 5 percent or 41/2 percent without rising prices—I think we can do all of these things: We can build up our defenses adequately; we can tackle questions of foreign aid; we can build the schools we need; we can get rid of our slums; we can build this country as the dynamic. positive force it should be in world affairs. And if we don't grow fast enough, we can't. I think the interesting thing is this: The Soviet Union is growing at a rate of about 7 percent annually. But so is capitalistic Germany. So is capitalistic Mexico. So is capitalistic Japan. Indeed, I think the average growth rate in western Europe is around 6 percent, all under capitalism. There is nothing wrong with our system. It is simply that the system is now in the hands of rather timid people who are thinking timidly, and I just don't think they have enough confidence in the dynamism of this economy.

Mr. BOURGHOLTZER, You would say that it doesn't require a greater degree of Federal

planning, then?

Representative Bowles, I would think that the question of national goals is related to this, and I would certainly favor this. Mr. Hoover originally suggested it back in 1930. I have talked about it, and so have many other people since. I think it would be a very good thing to hold hearings every summer, let's say, before a com-mittee or board of very highly respected Americans, representing all qualities and areas of our economy, and talk out and plan to see what our goals should be in housing, and schools, and roads, and urban renewal and defense, and all these other facets of our economy. But I don't think the plans should have any particular bite to them in the sense that they are totalitarian or any thing of that kind. I think we simply set the direction in which we like to go, and

familiarize Congress and the American people fully with where we can go and where we need to go if we are going to do what we have to do in this next 10 years.

Mr. Brooks. Congressman, you are going to have to cover a great many domestic subects in the platform. I am wondering to what extent the South is going to be recognized in the drafting of the platform?

Representative Bowles. The South is certainly going to have its big chance to be heard as is the East and the West and the North. All sections are. My own views on all these questions are pretty well established. I have written and spoken a lot on them, but I am simply one member of an 110-man-and-woman committee.

Mr. BROOKS. The next question that comes out of that: are you ready to risk a walk-out of some of the southern delegates if you write a civil rights plank which is not acceptable to them?

Representative Bowles. Some people have gone so far as to become very annoyed with some of our Democratic brethren to the south and have said, "What if they do walk out; let's do whatever is required even to see that they do walk out." I simply can't accept this. I would like to see this Democratic Party remain a united party. We are the only national party, and I think this is a great advantage. It also carries with it certain problems; because it is a national party, our Whole difficulty of getting a consensus is obviously much greater, but my guess is that We can work this out. There are lots of good, forward-looking groups of people in South, who I know understand this world we are living in, who believe in the dignity of man and are willing to accept the word of that great Virginian, a former Governor of Virginia, Thomas Jefferson, who asserted in our Declaration of Independence that all men are created equal. I think we can handle this, and I think our Republican friends, I suppose, are hoping we can't, but I am very confident that we can.

Mr. Steele. A couple of your Republican friends the other day, Senator Goldwater and Congressman Miller, chairmen of the Senate and House campaign committees, said that your whole committee was masterminded by a few radicals with leftover ideas. Is this correct?

Representative Bowles. I saw that, and I was very intrigued because he simply listed the people who have written the various council reports, the advisory committee of the Democratic Party. I know all these people very well. I think they are remarkably fine men, and many of them are my very good friends, and I admire them very greatly So here you have definitely guilt by association on my part. But I would like to call Your attention to the fact that on this very day, Mr. GOLDWATER also teed off against Mr. Eisenhower who, he said, was dabbling in socialized medicine, and he also accused Mr. Flemming of going in for a "dime store New So, I'm in highly respectable company.

Mr. STEELE. One of the gentlemen from your own State, Schator Bush, on a somewhat different line, had a proposal that each platform plank carry a price tag, how much it was going to cost. You are Chairman of the Democratic Platform Committee. Do you think this is a good idea?

Representative Bowles, I would be delighted to do that. I don't think it is very practical because I don't think we can always tell just what it will cost, but I think it is perfectly fine to know what it costs. I also think we ought to know what it will cost not to do some of these things. What are our slums costing us today? What is an inadequate military costing us? What is insequate foreign aid costing us? What is inadequate education costing us? Let us know the cost of not doing things as well as the cost of doing them.

Mr. ROBERTS. I was reading a magazine article you have written about the China problem recently, and one thing struck me. The man you are supporting, Senator Kennedy, has said publicly that if he were elected he would do something about ending the American commitment to Quemoy and Matsu, the offshore islands. But I notice you avoided that question, or did not mention it. Do you disagree with him on this?

Representative Bowles. No. I think we are very wrong to stake the future of our American prestige and strength on two islands just off the coast of China. I also feel it would be a great mistake to get off those islands under fire and under pressure. I think that is the difficulty. When there is no pressure, I agree that we should try to negotiate our way off them, neutralize them, find some way to neutralize this thumb that we have that is sort of sticking in the Communist's eye.

Mr. ROBERTS. Do you expect in the platform this year that for the first time the Democrats will come out in favor of a two-China policy?

Representative Bowles. I don't know, because, of course, I can't speak for this committee, but I do feel very strongly that the recognition question is pretty much a dead-end street. If we could visualize our Government calling up Mr. Mao Tse-tung and saying, "Look, we have decided to recognize you people," I think he'd get a very fast answer back which would be "Do you recognize our sovereignty over the island of Taiwan or Formosa?" And we would say, "Of course not, we will defend Formosa," as, of course, we must. I think Mr. Mao Tse-tung would then hang up the telephone and that would end the conversation. I think our China policy really ought to start with that point. What we need is a China policy that goes beyond this narrow debate, this rather sterile debate on recognition and goes to the question of how we can make some contacts with the Chinese people. I think we have something to learn from the question of the Soviet Union. From 1918 to 1933 we did not recognize the Soviet Union. We had all kinds of contacts with the Russian people, however. We sent our newspapermen there; many of them went there; many Russians came here, tradesmen, and engineers, and doctors, and people from universities, and we had contacts with China

I happen to think that China is probably the biggest question, the biggest challenge that we are going to meet in these next 20 years. I think China is inherently aggressive in many of the situations that exist there. It has too little land, too many people, too few resources, and worse still, politically and economically and militarily soft neighbors, which almost invite aggres-We are not coping with this problem. I don't think we have a plan for what we would do if the Chinese started to move into southeast Asia. I think we should have a plan, a comprehensive one, a military plan, a political plan, an economic plan. I think that there is some hope here-it may be a very farfetched hope—that we may have some situations here where our interests cross with the Russians. It is conceivable that they are as frightened of this possible development as many of us are.

Mr. Lisagor. You have written that there

Mr. Lisagor. You have written that there is a national consensus in this country on foreign policy. Do you still believe that?

Representative Bowles. I believe it very deeply, and I have been all over the United States in the last many months, traveling from one end to another, talking to all kinds of people, and I feel an extraordinary feeling of oneness to a degree with all kinds of audiences.

Mr. Lisacor. Doesn't that bring us down to the fact that you are really going to vote on personalities then in this election insofar as foreign policy is concerned? It isn't a question of which man you choose is better qualified to lead you?

Representative Bowles. I hate to disagree when we are so close to the end of this program, but I will have to disagree with that. I do feel the approaches, what the two parties say they are for, are quite similar. They are both for peace; they are for negotiation; they are against colonialism; they are for foreign aid, and so on. When you begin to examine the way these two parties go after these objectives, you find a tremendous difference. First of all, the Republicans. I think, accept this world of chance with great unhappiness. They would like to see everything frozen—if everything would only stand still, if only Africa would stand still and Asia and Europe and Latin America.

I think we Democrats recognize that we are in a revolutionary world of great change, enormous potential. That this revolution is not something we should be frightened of; it is something we should welcome, something we should try to influence and positively, creatively push in the direction of greater human dignity.

I think there is a tremendous difference here. Emerson once summed it up in saying that wherever there is politics you will find people grouping around two ideas, one associated with memory and the other associated with hope. I think our party is the party of hope.

Mr. Lisacor. Could I be a little more specific: How then do you disagree with Vice President Nixon basically on foreign policy?

Representatives Bowles. I think we disagree on approach, largely. I think his approach would be more expedient. I think his military aid program would probably be much more expedient than ours. I think it would be less creative. I think there will be less emphasis on the initiative—not necessarily because Mr. Nixon himself feels that way, but after all, he is tied to Mr. Halleck, and I might also say he is tied to Mr. Goldenters, who has been brought already into this particular broadcast. He has to settle with those people.

Mr. Brooks. Gentlemen, I am sorry to have to interrupt. Thank you very much, Congressman Bowles, for being with us.

Foreign Cotton Trade

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. WIDNALL. Mr. Speaker, one of my constituents who is a cotton and commission merchant in New York City has told me many times that the cotton trade in foreign countries expresses bewilderment over the manner in which our cotton situation has been handled. He recently sent me a letter from Smith, Coney & Barrett, cotton and general produce brokers of Liverpool, England. To those of us who are wrapped in the mystic maze of present farm legislation and operation, I believe the letter will prove informative and helpful.

The letter follows:

SMITH, CONEY & BARRETT,
COTTON AND GENERAL PRODUCE BROKERS,
Liverpool, England, May 2, 1960.
Messrs. Robert Moore & Co.,
New York.

DEAR SIR: We thank you for cotton comments of April 29, 1960.

What you write regarding the effect of U.S. farm policy of the New York cotton market is even more true of Liverpool. whole mechanism built up so beneficially during 100 years' trading has been ruined and the policy which has ruined it has brought nothing to anyone except hordes of bureaucrats and possibly some politicians. That it should happen in the United States of America is the most astounding thing of all. In Russia it would be in line with national policy. How on earth Americans reconcile it with their belief in free enterprise is beyond us. Yet there would seem to be no longer any hope that it can be ended and thus we shall shortly see the demise of all the futures markets.

From the Liverpool end we see also the growing tendency to ship cotton inferior to that contracted for and a large stock of undesirable and unsalable cotton has accumulated here. Added to the other problems which will face United States of America in the future is this unreliability of quality. Much of the recent cotton shipped has no character and we foresee an increasing disinclination on the part of spinners to use American cotton. In this market and others. such as Bombay, this tendency is already clear. It probably started with mechanical picking and has been latterly accentuated by recent ginning methods.

Now with an estimated acreage of 17,500,-000 for the next crop, we face the proability of a reversion to an increasing unsold surplus in the hands of the CCC, and all the uncertainty of a variable export bonus.

It is quite certain that more and more drastic measures will have to be taken to ensure America's so-called historical share of the export market.

The whole thing is crazy and apparently hopeless.

Yours faithfully,

SMITH, CONEY & BARRETT.

Washington Report

EXTENSION OF REMARKS OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 28, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

Federal "aid" to education, labeled "School Construction Assistance Act of 1960", approved by the House this week 206 to 189. Before passage, the program was expanded (from 3 to 4 years), the Powell amendment barring use of funds for segregated facilities was added, and an amendment aimed at channeling the greatest aid to areas of greatest need was defeated. At the outset, the bill aserts that despite local efforts immediate Federal action is required to eliminate classroom shortages. Inadequate financial resources in many communities is the reason stated. Money is allocated to the States in direct ratio to the number of school-age children and without regard to need. Then, following 15 pages of regulations concerning certification, matching funds, labor standards, etc., the disclaimer is made against any Federal controls to accompany these grants-in-aid. Against this Alice-in-Wonderland approach, let's examine some facts.

First, is there a problem? No, not of the sort being pictured. Educational plants across this Nation generally are excellent and though schoolroom shortages exist, school construction rates have soared by more than enough to eliminate deficiencies—all without Federal intervention. Where local limits on bonded indebtedness delay new construction, it is by the choice of those most concerned as taxpayers and parents. And this business about "lack of local financial resources" would be funny if the joke weren't a bitter one. "Local taxpayers" are the ones who pay all the Federal taxes, too. But once sent to Washington, less of their money can find its way back in "aid" because of the overhead costs of Federal bureaucracy. Moreover, Federal officials-not local taxpayers-would determine how those tax dollars might be spent. bill is bad enough to set many speculating over the real motive behind it. At the least, it's a foot in the door to ultimate Federal domination of our schools. I voted and spoke against it, reminding my colleagues of a resolution against Federal "aid" sent to all Texas Congressmen by our State legislature.

The Public Works appropriation bill provided money for civil functions of the Army Corps of Engineers, the Atomic Energy Commission, and TVA-and included funds for public works projects throughout the Nation. totaling \$3,914 million. In addition to continuing all unfinished projects, there are 39 new construction starts, 5 of them outside the budget (added by Congress); also, 26 unbudgeted surveys and 15 unbudgeted project plannings. The bill passed 387 to 18. I voted against it. In my view, the world situation and our far-flung essential expenditures require that we curtail nonessential spending. The way to start is to cut down public works and welfare spending. Already we have a 20-year backlog of approved public works projects at the current rate of spending-and still we dream up more. Where's the money coming from?

The Korean "emergency" taxes will be continued for another year if the House follows the Ways and Means Committee vote-not because the taxes are right, but because the big spenders force the continuance of high wartime taxes. Either we pay our way or resort to deficit financing, which waters the value of our money and charges it to following generations. For example, those who telephone and transportation excise taxes reduced and want a reduced rate of income tax had better start checking the record to see who is spending their money in Congress, requiring continuation of high taxation. Next, assuming a small surplus, should we pay down the debt first or give ourselves a tax cut? No citizen should evade a personal decision on this.

The President laid it on the line with his talk about the summit conference. Yes, we spy in many ways, to be forewarned against surprise attack. We remember Pearl Harbor and Korea. Yes; we tried to protect pilot and plane by a covering statement before we knew his fate and the facts. Yes; we know that even negotiation (again remembering Pearl Harbor) can be used for duplicity, so why should we terminate our intelligence activities before a summit conference? we are continuing our intelligence efforts, most recently with the addition of the spy satellite. Would the critics have us give up spying, apologize to Russia, accept a surprise attack, and dig our own grave? There is no substitute for military vigilance and retaliatory strength since we won't attack first. I do not condemn criticism, but I do condemn partisan politics for its own sake in the defense field. This is no subject for personal aggrandizement or for deliberate confusion or distortion of facts for partisan advantage. More than any, those seeking our highest offices should be well grounded in knowledge and responsible in their statements.

Jobs After 40

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. HOSMER. Mr. Speaker, convincing facts and compelling arguments were presented for hiring workers over 40 in the Personnel Management Bulletin of the Commerce and Industry Association of New York, Inc. Describing utilization of the skills and knowledge of middle-aged and older jobseekers as "economically desirable as well as a business must," the article is as follows:

WISDOM AND NECESSITY

Hiring older jobseekers is sound business. It is also fast becoming a business necessity. This is the conclusion being reached every

day by increasing numbers of employers. A cold hard look at known facts about older workers on the job, and about America's manpower future, has persuaded many that it is economically desirable—and indeed inevitable-for employers to consider carefully such jobseekers when deciding whom to hire.

BUSINESS NECESSITY

For a good many years to come, there simply is not going to be enough young manpower entering the labor force to supply the growing employment needs of our economy. This makes it imperative for employers to look more and more to the older jobhunter. The following somewhat startling statistics obtained from the U.S. Department of Labor confirm this proposition beyond peradventure of a doubt.

How is our working population changing? On the basis of projecting relevant current trends, our country can reasonably expect to have a total labor force of 79.2 million by 1965, an increase of 10.3 million over 1955. Less than a million of this 10.3 million increase will occur in the 25 to 44 age group. while those 45 and over will rise by almost 5 million. That is, for every increase of 2 workers in the age group traditionally considered the most eligible for employment, there will be 11 new workers in the 45-plus age group.

How fast is our economy growing? The gross national product in 1955 stood at \$391 billion-or \$2,370 for each of our then 165 million people. In recent years the per capita gross national product has been increasing about 2.3 percent each year. If this rate of increase is to continue, by 1964 the gross national product will have to stand at about \$560 billion.

What size labor force will be needed to produce all these goods and services? 1955, with an average of 63 million in the labor force, \$391 billion GNP was renderedor \$6,190 per workers. Over the past 25 years output per worker (calculated on this basis) has increased 2.8 percent per year. If the output per man-hour continues increasing at this rate, the average output per worker should be about \$7,500 by 1965 (after in-cluding a possible 6 percent decrease in average annual hours worked).

It would take a labor force of 74 million producing at this average rate to render a \$560 billion GNP in 1965. Add to this 2.8 million members of the Armed Forces (roughly the present level) and 2.4 million unemployed (about the same percent of the total labor force as at present) and the anticipated labor force of 79.2 million will be totally absorbed.

These facts about the Nation's future manpower prove what many employers have suspected: Finding enough people to fill growing jobs needs apparently won't be possible without making fuller utilization of America's older workers.

AND BUSINESS WISDOM

Despite the apparent necessity of making fuller utilization of America's older manpower if our economy is to continue to grow, some doubts about the economic feasibility

of following this course persist.

Now, to be sure, employer reluctance to hire older workers is not based entirely upon fancy. Unquestionably, in some instances there are factors which rationally militate against such applicants. Often, too, some adjustments are called for in company personnel programs. However, the experience of employers who are hiring older applicants shows that many of these obstacles are more illusory than real.

Productivity: A 1954 University of Illinois study of 3,077 workers in the plus-60 age category shows only 20 percent turned out than their younger brethren. As to quality of work, only 7 percent were subpar.

In 1951 National Association of Manufacturers polled 3,000 employers with 21/2 million people on the payroll. The work for older workers was rated as equal or superior to younger employees by 93 percent of the respondents.

Abstenteeism: A 1956 U.S. Labor Department study of 16,500 male employees working in 109 manufacturing plants, showed older workers to have a 20 percent better attendance record than younger employees.

Accident rates: A 1956 U.S. Labor Department study of 18,700 employees showed employees 45 and over had 2.5 percent fewer disabling injuries and 25 percent fewer non-

disabling injuries than those under 45. Turnover: A 1956 U.S. Labor Department study of seven labor market areas showed separation rates are relatively low for older workers. While workers 45 and over held about 35 percent of the jobs among the 2,000 employers surveyed, they accounted for less than 25 percent of the separations which occurred during the survey year.

Pension costs: Whether or not a private pension plan poses a cost barrier depends upon its terms. If it includes age limits on eligibility for participation, or if benefits are geared to length of service, the plan need not be a major cost obstacle.

A somewhat more self-conscious basis for the pension obstacle exists, however. It is the feeling among many an employer that an unsavory community relations problem may be created if he hires an older applicant now, only to retire him a few years later on an inadequate pension.

This view is held on questionable logic. The public does not "expect" all employers to provide substantial pension benefits retirees. Less than one-fourth of all Working people are covered by private plans. The basic economic protection of the plus-65 already exists in the form of benefits under the Federal Social Security Act. The general employer community, on the other hand, may be subject to a good deal more public opprobrium for refusing to hire older jobscekers, than particular employers ever will be for retiring with a minimal pension those Workers whom they have hired only a few years earlier.

Group insurance costs: Here, as in the case of pensions, whether hiring older applicants will push up costs depends on the nature of the plans involved. Generally, however, a modest number of older applicants can be brought into group life and health insurance plans without substantially increasing overall employer costs.

Job skills: Except possibly for certain unusual specialties, the older worker is more likely to possess more skills, training and job know-how than younger employees. While 40 percent of the 160,000 job hunters included in the 7-city study were 45 or over, this group contained 58 percent of all the skilled persons looking for work.

Personality factors: Some of the common theorizing about older workers is that they are inflexible, unimaginative, and have trouble getting along with fellow employees. Practical experience indicates that the personality factor has more positive than negative features.

In the seven-city study, 57 percent of the older workers placed by State employment service offices accepted jobs in what to them were new industries, 39 percent in new occupations. The University of Illinois study of "plus-60" employees found that in the opinion of their supervisors, 32 percent of the oldsters got along better with their fellow employees than did younger workers; while only 9 percent got along worse.

More positively, older workers often pos-

ss a number of desirable personality traits, often found lacking among less mature employees. Stability, loyalty, reliability, will to work steadily, sense of responsibility, stabilizing influence on younger workers, serious attitude toward the job, are some of the special plus characteristics found among older workers.

Profitmaking, private employers are notand should not be-eleemosynary institutions. Hiring older workers, however, is not essentially a matter of charity. No responsible voice would suggest than an older applicant be hired except where he is ready, willing and able to pull his own weight The chances are he will do just that-and more. Any balm to the conscience of an employer who hires on the basis of competency rather than age is unimportant compared with the payoff which will occur in his profit-and-loss statement.

Address by Louis S. Dennis

EXTENSION OF REMARKS OF

HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. COFFIN. Mr. Speaker, it is both an honor and a pleasure for me to insert in the RECORD an address of unusual excellence which was given yesterday in Maine by Louis S. Dennis, the Director of the Division of Veterans Affairs for the State of Maine. Mr. Dennis has long been highly regarded for his painstaking and conscientious work on behalf of the veterans in our State. I am sure that the thoughtful remarks of Mr. Dennis will be read with appreciation by many throughout the Nation:

My fellow Americans, on this, the 30th day of May, we of the State of Maine, together with patriotic Americans everywhere, gather to pay reverent tribute to our honored warrior dead, here at home and at their final resting places throughout the globe.

It is with heartfelt humility and with deep gratitude that we here recognize the measureless sacrifices of these brave men and women and the sense of loss borne by their families and their friends. It is right and fitting that we should set aside this special day to decorate with flags and flowers the last resting places of our dead comrades in arms. These rites are but a token of the profound love and respect we bear for those who gave their lives that we might continue to live in honor and in freedom.

We, the living, cannot live entirely in the present. From time to time it is appropriate that we draw upon our country's rich and colorful history for a vision of what has gone before us, a vision of the selfless patriotism and limitless sacrifice that have erved to make this Nation the bastion of liberty and the hope of the free world.

In the pages of history we find the spiritual heritage of our Nation, our dearly won traditions, our American credo of love of

God and country.

The birth of Memorial Day came about shortly after the end of the Civil War, still to this day the bloodiest, most savage conflict that this or any other nation ever en-dured. But the Nation did endure.

The end of the Civil War brought peace but no great happiness to the small town of Columbus, Miss. Columbus had stood in the path of many stormy campaigns. Of the hundreds of brave men who marched away from Columbus to fight for the cause they felt was just, only a few returned alive. town cemetery held hundreds of Confederate soldiers, as well as some 40 men who had worn the blue. The women of Columbus, grieving for their soldier dead, decorated with flowers the graves of their loved

Though the war had been a bitter experience, in a gesture of generosity, the women also placed flowers on the bare and halfforgotten graves of the Union soldiers buried there. The idea of a day of remembrance for the Civil War dead spread from town to town and swiftly caught the imagination of the people of the reunited Nation.

The incident also gave inspiration to a northern man who wrote the beautiful poem-

tribute, "The Blue and the Gray."

In May 1868, Union veteran Gen. John A. Logan, commander in chief of the Grand Army of the Republic, issued a proclamation that every GAR post should hold ceremonies decorating the graves of their dead com-rades. He declared: "The 30th of May 1868, is designated for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country; we should guard their graves with sacred vigilance; let no wanton foot tread rudely on such hallowed grounds. Let no vandalism or avarice or neglect, no ravages of time, testify to the present or to the coming generations that we have forgotten as a people the cost of a free and undivided republic.

"If other eyes grow dull and other hands slack, and other hearts cold in the solemn trust, ours shall keep it well as long as the light and warmth of life remain to us."

Now, it is nearly a century since that first Memorial Day, and we cannot help but be stirred by much the same feelings expressed by General Logan. Once again we are reminded of our hero dead who have emblazoned their battle flags with names like Valley Forge and Yorktown; Bladensburg and New Orleans; Contreras and Chapultepec; Gettysburg and Appomattox; Santiago and San Juan Hill; Chateau Thierry and the Argonne; Pearl Harbor, Guadalcanal and Normandy; and finally Pork Chop Hill and Heartbreak Ridge.

The cost of war in human sacrifice is staggering. But it is a price in blood that the defenders of this Nation have paid again and again with reservation.

Total deaths in World War I were more than 116,000. In World War II, 405,000. In Korea, 54,000. It may come as something of a surprise to some of you when I tell you that more Americans died, on both sides, fighting the Civil War than in World War II and the Korean conflict combined. And the nearly 500,000 deaths in that fratricidal war between brothers approaches the 522,000 deaths in World Wars I and II.

Let me turn for a moment to that most monumental and tragic experience from which came the rebirth of this Nation. I

speak of the Civil War.

I said earlier that hundreds of brave men marched away from Columbus, Miss., to fight for the cause they held just. In the same way, hundreds of men marched away from Lewiston and Wilton and Bangor and Augusta and from the small farms and the logging camps of the State of Maine to fight

for the cause they held just.

And later, at Antietam battlefield, and at Gettysburg, Fredericksburg, the Wilderness, Petersburg, and North Anna, the sturdy, husky men from Maine were to meet in deadliest combat the lanky, tough men from Mississippl. And so the war went on from battle to battle and campaign to campaign, until to one famed veterain Maine volunteer infantry regiment, the 20th Maine, on Palm Sunday, April 9, 1865, there came the final stillness at Appomattox Courthouse, Virginia. Lee had surrendered. The Civil War was over.

The 20th Maine was raised from the coast, the farmland, and the "big woods" country of Maine, and it truly represented our great

State

The State of Maine sent more than 70,000 of its sons to fight in the Civil War, and nearly 10,000 of these men were to give their lives for their country. I should not have used the word "sent," for every one of these Maine men was a volunteer. Maine's contribution to the war was indeed an outstanding gesture, with 70,000 men fighting for the Union.

From an aggregation of independent-minded recruits, the 20th Maine was forged in the fires of battle into one of the most distinguished regiments in the great Army of the Potomac. Its casualties were among the highest of any of the regiments of the Union Army. Curiously enough, a brother Maine regiment, the 1st Maine Heavy Artillery, fighting as infantry alongside the 20th at Petersburg, Va., suffered the greatest loss of any regiment in a single action in the Union Army. The 1st Maine lost more than 72 percent of its men in a mere 7 minutes of fighting.

At Gettysburg, the 20th Maine was the extreme left flank regiment holding the key position of Little Round Top. Though hit hard by twice its numbers, and having had its flank turned back upon itself, the 20th Maine men fought back to back and shattered

the Confederate attack.

When the time came for Lee's surrender at Appamatox, the 20th was one of the dis tinguished regiments chosen to be present at the occasion. drawn up in parade rest, the brave survivors of the 20th could count 19 battle 'honors, representing 19 major en-gagements, emblazoned on their State of Maine colors.

Many of these Maine men returned to their homes, alive but shattered in body and broken by disease and hardship. A grateful Nation did what it could to help rehabilitate their shattered lives, as this Nation has al-ways endeavored to help the veterans of all

wars return to useful careers.

This is but simple justice, and flows logically from the dictum that veterans' readjustment and rehabilitation programs are in reality but a delayed cost of conducting war. For thousands of veterans the war did not end when the guns fell silent. For many veterans, the war will never end. So, as we here pay homage to our noble war dead, let us not forget those still living who have borne the battle that the Nation might live.

I think it is interesting to note too that, expressed as a percentage of our yearly gross national product, Federal expenditures for veterans' programs have remained almost constant for nearly three-quarters of a century, even though the veteran population has grown greatly during that time.

When the tremendous issue of the preservation of the Union broke out in civil war, there was no apathy upon the part of the American people. Half a million war dead mutely testify to that simple fact.

But today, as we cope with the monu-mental issues involved in the cold war with the Communist world, there seem to be certain segments of our population that have lapsed into indifference and apathy, and this in the face of what is perhaps the greatest threat this Nation has ever encountered.

The cause of freedom never remains completely won. It must be defended constantly and continuously in peacetime, wartime, and

cold war time.

So, in one sense, our citizens in uniform today in the Armed Forces are veterans of the cold war, and they serve their country with the high purpose that this cold war with the Communist conspiracy shall not break out into an international holocaust for mankind.

In these times of dread uncertainty, it is fitting that we take stock of ourselves as Americans to weigh the question of whether we will remain to be worthy of the magnificent example set for us by the brave generations of Americans who have served our Nation in its wars.

So, on this 94th anniversary of the first Memorial Day gesture in Columbus, Miss., in 1867, we solemnly pause in silent tribute to our honored American dead. We reverently pray that never again will American manhood go to war, but we also firmly resolve that if another conflict should come upon us, we of the present generation will be worthy of the noble heritage that has been handed down in sacred trust.

With the wartime President, Abraham Lincoln, we too here highly resolve that these honored dead shall not have died in vain.

A Carefully Planned Program

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial which appeared in the National News, official newspaper of the Veterans of World War I of the U.S.A., Inc., issue of May 1960:

A CAREFULLY PLANNED PROGRAM

The drafting and execution of a comprehensive legislative program calls for meticulous and careful planning.

Unfortunately, in years past the Veterans of World War I, as an organization, has not had the necessary funds, the experienced personnel or the required continuity of policy to set up and maintain an effective program.

The situation at the present time serves to point up the glaring defects in the mode

of operation in past years.

This is an election year. The national conventions of the two major political parties will be held in July. At the present time the Democratic national platform committee is holding a series of panel hearings to receive the viewpoint of different organizations and groups throughout the Nation on the subject matter that will go into the party platform that the Democratic nominees for President and Vice President must present to the voters. The Republican national platform committee will meet in Chicago next month to listen to representatives of labor, industry, farmers, and other segments of our Nation give their suggestions as to the ideas that will be incorporated in the Republican program.

Thus far, representatives of the Veterans of World War I have appeared at panel meetings in Philadelphia, Minneapolis, and Detroit. They have urged the inclusion in the Democratic platform of a pension and hospital resolution for the benefit of those men who served in 1917 and 1918. They have submitted forceful and intelligent statements setting forth the crying need for assistance to their aging comrades now. Plans have been formulated calling for further appearances at the other cities in which panel hearings will be held. Representatives will go to Chicago to testify before the Republican Platform Committee.

This is an important step in the right direction. However, all of the groundwork for this election year should have been instituted 2 or 3 years ago. A real grassroots organization should have been developed that would have been set up at the county committee level, seeking to have pension and hospital resolutions adopted by those bodies. Then, on up to the State committees which would in turn seek inclusion in the platforms of both political parties the type of resolution that would grant some measure of relief to our buddies. As stated previously, these vital things were impossible of accomplishment by our organization due to lack of funds and the absence of a definite legislative policy that would carry over from one administration to another

It should be remembered that the ultimate fulfillment of a legislative goal, and particularly one as controversial as ours, is only accomplished by minute planning, the use of delicate tact, long hours of plodding through the halls of Congress and a dogged determination to see the thing through. It is no bed of roses and the National Legislative Executive Committee is entitled to the fullest cooperation, which is not always forthcoming, from each and every member of our organization.

Regardless of the outcome of our program this year, plans should be inaugurated in every State to carry this fight to the very top. It should be remembered that it is much easier for a candidate to defend an item that it incorporated in the platform of his party than to attempt to sell an idea that has not gained general acceptance within his party.

We should and must take every step that will aid us in our fight for our needy com-

rades.

Responsible Rebuttal

EXTENSION OF REMARKS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the May 26 issue of the State Journal of Lansing, Mich. The article entitled "Responsible Rebuttal," adequately expresses my opinion regarding President Elsenhower's conduct of the U-2 incident and I feel the American people can be proud of our President's mature leadership and responsible statesmanship concerning the ill-fated summit conference.

The editorial follows:

RESPONSIBLE RESUTTAL

The American people have good reason to be proud of the dignity with which President Eisenhower stated to his countrymen and the rest of the world America's position with respect to the events leading to the col-

lapse of the summit conference.

Lesser men might have replied in kind to the insulting personal attacks by Soviet Premier Khrushchev. Refusing to engage in personalities, Mr. Eisenhower calmly discussed the issues and answered each of the criticisms directed at administration policy by Khrushchev and by some Americans.

President Eisenhower again evidenced his deep devotion to the cause of a just peace by making it plain that he would not be deterred by the collapse of the summit meeting or Khrushchev's hostility from continuing America's quest for peace and safeguarded agreements on disarmament and a nuclear test ban through negotiation with the Russians and the leaders of other countries.

Mr. Eisenhower also made it clear that the Soviet premier's attacks upon him and the United States would not cause this country to terminate cultural contacts between Americans and the Russian people. On the contrary, Mr. Eisenhower called for improvement in such contacts.

While the President was dignified and calm, he also was firm when he stated this country's intentions of maintaining strong defenses. He was firm, too, in speaking of this country's necessary efforts to guard

against surprise attack.

While Khrushchev seized upon one of the U.S. reconnaissance flights, which he said he had known about at least since last fall, to wreck a conference which presented an opportunity for progress toward peace, President Eisenhower responded by renewing his proposal for an "open skies" inspection system which would provide safeguards for all countries. The Chief Executive added to that proposal an offer to donate U.S. reconnaissance aircraft to the United Nations for aerial surveillance for protection of all nations.

If the Russian people had been able to hear President Eisenhower, Premier Khrushchev might find that his position at home had not been improved by the sharp contrast between his insulting and provocative diatribes and the content and manner of delivery of Mr. Eisenhower's speech Wednes-

day night.

Regardless of the judgment the Russian people may form on the basis of what their government permits them to hear, there is abundant reason for confidence that President Elsenhower's stature as a statesman devoted to peace has been greatly increased while that of Premier Khrushchev has been greatly impaired in the eyes of peoples who do not blindly follow their Communist leaders.

Logical Pattern Appears in Russian Actions

EXTENSION OF REMARKS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tucsday, May 31, 1960

Mr. BRAY. Mr. Speaker, millions and millions of words have been poured into many, many volumes in attempting to analyze the actions of the Soviet leaders, especially when they reverse their field and start to run in the opposite direction. I think we sometimes find much more motive than actually exists in such actions.

One of the most logical approaches to understanding the zigzag course of Russia's attitudes toward us is found in an interpretation which formed the basis for an editorial in the Indianapolis Star of May 28, 1960:

BUT ARE WE DOGS?

There is one thing that the Soviet Union did discover before all of the rest of the world. It was a discovery made by Russian Physiologist Ivan Pavlov. Pavlov proved long ago that "one of the surest ways of breaking down the nervous stability of a dog is to give a trained but anxious animal a random series of positive and negative conditioned stimuli, producing uncontrollable neurotic excitement which may later lead to hysteria and submissive behavior."

Pavlov would give food to dogs and then snatch it away just as they were about to eat their next meal. He would stimulate them into expecting something good and then suddenly introduce something bad. This way he drove the dogs nuts. They would become so confused that they would

do whatever he wished.

Look back. Has this not been the exact method that the Soviet Union has used in dealing with the West for the past 15 years? First they threaten us with danger. Then they suddenly propose all sorts of peaceful programs like total disarmament. Then suddenly the war clouds gather over Berlin. And right after that Khrushchev is talking about holding another summit conference after the American elections.

Just as we gird ourselves to face the moment of decision, they turn on the smiles of coexistence and we relax until the next threat. The recent summit conference is a good case in point. Khrushchev did his best first by threat and then by cajolery to get the allied powers to the summit. Then suddenly he kicked the whole thing apart just when our leaders began to hope that something good might really come of a summit. Yet even as he brutally torpedoed the summit, he left the door open for the next Pavlov treatment—another meeting 8 months or so from now.

The Soviet Union has one weapon to use against us and this is it. It is the weapon of psychology and propaganda. They lift us up with hope. They set us down hard with threats. Why do we continue to fall for it? Why do we respond like dogs to these alter-

nating stimuli?

Why don't we act like men instead of dogs? Dr. William Sargant, an eminent London psychologist, last week pointed out that Khrushchev applied these positive and negative pressures to the allies so skillfully at the summit that "some of the British and American press and public alike became, temporarily, just as suggestible as Pavlov's dogs." They became hysterical. They became submissive. Anything to end this constant upness and downness. Peace, peace, peace is the cry and they forget what is far more important to human beings, liberty, justice, honor courage.

How should we reply to these alternating threats and cajolery? Says Dr. Sargant, act like human beings, not dogs. "Deliberately ignore the signals and stop trying to make any sense of them." If we understand what the Soviets are trying to do we will no longer fear or even respond to these tricks.

Americans must realize that the Soviet method is to confuse, divide, and frighten us into accepting their aims and claims when there is no real reason why we should do so. Step by step, year by year they try to wear down our nerves until we will finally say wearily, "All right, we have had enough. Go ahead and do with us as you will." The slogan will become, "I'd rather be Red than dead," and we will be willing to lead a dcg's life.

But are Americans no better than dogs? Are you?

Petition From a Plain People

EXTENSION OF REMARKS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1960

Mr. BRADEMAS. Mr. Speaker, there are several thousand people in our country today who, because of conscience or religious belief, are opposed to taking part in the Federal social security program. Among these people are the men and women of Amish faith.

Last month I received a petition signed by 17 Amish bishops in 12 States urging Congress to provide exemptions from the social security program for those opposed to such participation on religious

grounds.

This petition was sent to me by Bishop Henry N. Miller, of Middlebury, Ind., with whom I have corresponded on this problem since early last year when I introduced legislation (H.R. 4252) to provide exemption from social security participation for those who, because of their religious beliefs, do not wish to take part in the program.

We all respect the rights of Americans to follow the dictates of their religious faith. I hope that the relatively small number of people who are interested in the passage of my amendment to the Social Security Act will not be deprived of these rights simply because they do not represent a larger and more vocal group.

Mr. Speaker, under unanimous consent, I include at this point in the Record, the following article, "Petition From a Plain People," which was published in the May 18, 1960, issue of the Goshen (Ind.) News:

PETITION FROM A PLAIN PEOPLE

A rather startling petition was presented to Congress recently. It bears the signatures of 17 Amish bishops in a dozen states. What they want is freedom from social security for themselves and their flocks. It violates the Amish faith, according to their appeal.

At their request, Representative Paul B. Dague, Republican, of Pennsylvania, is sponsoring a bill to "allow anyone to decline social security benfits on conscientious grounds." Many members of the Amish and Mennonite faiths live in Pennsylvania's Lancaster County, which forms half of Representative Dague's constituency.

"They are known locally as the plain people, and they enjoy the respect of their neighbors because of their industry, their peaceful habits and their unshakable religious faith." he told Congress.

"If it is right and proper to grant exemption from military service for religious reasons, we should accord the same relief to those who refuse to accept handouts from Government because of qualms of faith."

Social security payments can scarcely be called handouts. Rather, they come from a Government insurance program which is compulsory under Federal law,

But the plain people want no part of it. Their bishops' petition spoke thankfully of "a nation wherein a people can live according to the dictates of their consciences."

They summed up the history of their beliefs, and said that social security "is abridging to our faith and doctrine, which is older than this Government."

They and their followers are a relatively small band scattered among the nearly 180 million people of this Nation. Certainly their views on social security aren't shared by most of their fellow citizens. On the contrary, their petition comes at a time when the cost of living has raised massive demand for increasing the meager pension provided by social security to our senior citizens

But why force this money on persons who have religious scruples against accepting it? We hope Congress can find a way to grant the Amish petition.

Implications of the Explosion of Technology

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. McCORMACK. Mr. Speaker, an outstanding officer who has dedicated his life to the service of our country, a scholar, particularly in the important field of science and technology, and one whose views are worthy of deep consideration, is Lt. Gen. Arthur G. Trudeau, Chief of Research and Development of the Department of the Army. It is fortunate that we have men like General Trudeau as officers of the service branches that constitute our Department of Defense, and to whom we must look, in the event of war, for our country emerging as the victor.

On April 26, 1960, at the Asilomar National Strategy Seminar at Pacific Grove, Calif., General Trudeau made remarks entitled "Implications of the Explosion of Technology" that is most informative and challenging and should be widely read and analyzed, which remarks of General Trudeau I include in my extension:

> IMPLICATIONS OF THE EXPLOSION OF TECHNOLOGY

General Binns, General Cannon, distinguished guests, ladies and gentlemen, fellow Americans, on July 4, 1960, the U.S. Army will not have one antiaircraft gun operational in the whole North American air defense system.

Less than 7 years ago, following the Korean armistice, 1,000 of those guns-90's, 120's and sky-sweeping 75's-girded our continental defense against foreign attack.

Through two wars and a quarter century of time, they were a main reliance. Today they are an anachronism, in an age when Nike missiles ring our centers of population and great industrial power and we labor unceasingly to perfect our defense umbrella against Communist threats of a nuclear hallstorm hurled through space.

This is but one illustration of the implications of a technology which on all fronts is currently revolutionizing man's concepts

of peace and war.

America is poised at a crucial moment of history-at a vital crossroad where two fastmoving phenomena are colliding in time. The enigma of the moment is on whose side is time? Without resort to discussion,

I believe we would agree that time allys itself with whoever uses it most effectively.

One of the phenomena of the moment is the growth and spread of the vast international conspiracy-world communism-that alien ideology dedicated to gaining unlimited power and domination over the globe. The challenge of communism, as comprehensive as it is critical, spans the economic, social, and political areas of action as well as the military.

The second phenomenon—the explosion in science and technology-is drastically reshaping our world, and in the past two decades has propelled mankind farther along the path of material progress than in any comparable period of recorded history. Hardly a field in the physical, life and social sciences is not changing today-and changing rapidly.

In the last 100 years-2 percent of recorded time-mankind has achieved 90 percent of his technological progress. In the last 100 years out of 5,000 we have leaped 90 percent of the way technologically. The speeds of transportation and communication have increased by 3-to-4 magnitudes. Of all the men who have ever been trained in science and technology, it is estimated that 90 percent of them are alive today.

The implications of this exploding technology are truly fantastic. Every day brings new evidence of growth in knowledge and its application—challenging our imagination, our ability, and our judgment to utilize it wisely. The acceleration is so great, our sense of values are becoming confused, per-

haps hopelessly so.

For the United States, there is both great danger and great opportunity in this trend of events. We must recognize and make the most of these revolutionary implications. We must use technological progress, to the maximum extent, to meet and beat the Communist challenge.

Today, Russia is racing to advance a materialistic ideology with a concentration of resources approached only in wartime. Though we sought it not, we are committed to a vicious contest and we dare not fall behind. The Soviets are resolved to surpass us technologically because by so doing they can surprass us economically. Russia continues to increase its industrial growth at a rate at least twice as fast as ours. The Russian effort is supported with more annual capital investment and with twice as many scientists and engineers as our own. In space technology they continue to advance significantly, and in the area of conventional war power they out produce us and their equipment is topflight.

The Red-written record is clear. has been starkly clear since the first unfurling of the banner raised by Marx and Engels and Lenin against God and man. Make no mistake: Since that convulsive event, Christian civilization and communism have been locked in a struggle to the finishand wiser heads have realized it.

Like you, I view this situation with some trepidation, but I am more shaken by the fact that many-many of our people do not. They are too complacent, too beset with seeking final solutions to world problems through such hopeful policies as containment and status quo, as they are lulled by the siren of peaceful coexistence and languor in the lap of luxury and domestic prosperity.

Our people must come to the realization that the tides of history cannot be contained and that there is no such thing as maintaining the status quo. Unless we have the urge to push onward and upward, we shall be thrust back. To rest is to rust. I can find in history no periods which mankind views with real pride except those in which heroic efforts usually accompanied by great sacrifices were made to advance. There is inspiration and growth in the path of progress; there is only

atrophy of the spirit in fancied security and The great illusion of the invincirepose. bility of American power needs to be carefully reexamined in the cold light of a new

There can be no doubt in any wellinformed mind that a rapidly expanding Soviet technology with all its sinister facets, poses the greatest threat in our day to the peaceful and productive evolution of mankind. With all our energy and resourcefulness we must counter this threat but it can't

be done by ignoring it.
Within this context, I speak to you today. The implications of an exploding technology increase daily in number, nature, and diversity. Truly, this is an age demanding unprecedented exertion and imagination as we face the task of conquering our terrestrial environment, and of exploring the depths of the sea and the boundless regions of celestial

But an exploding technology in itself can be a benefactor and a monster-a Jekyll and Hyde. As it surges forward to give mankind the beneficial fruits of science, it creates in its wake tremendous problems that man seems unable to solve in a timely manner.

Let's consider first the beneficial-the Dr. Jelevil side.

Here, the golden rein of exciting new ap-plications of scientific discovery promise to raise the world's standard of living-to give the world's hungry masses more food, better shelter and other necessities of life. We are making tremendous strides in the control of disease and improving our biological environment. We are also beginning to learn how to control our physical environment.

New sources of energy are steadily feeding the growing appetite of industry for power and increasing man's productive ability and his comforts. New machines, soon to be in production, will provide several times more mechanical and electrical energy than present models with great reduction in size and weight. Think about some of the fantastic promises of technology glimpsed through electronics and automation. Through automation, technology promises more of the necessities, comforts, and luxuries of life if we can only learn to utilize and distribute them in an acceptable manner.

New advances in transportation, munication, shelter, and utilities should make it possible for more people to break away even more from large, urbanized areas or isolation and live a better community life.

The future is challenging in every respect. New developments in metallurgy-the creation of new alloys with amazing characteristics capable of withstanding the extremes of temperatures and pressures we are encountering in this missile and space ageopen new vistas for exploration not only in outer space but in the ocean depths and the bowels of the earth. Their application to commerce and industry will reshape our pattern of living in the decades that lie ahead. New chemical and thermodynamic developments of high-energy fuels, plastics and power sources will redound to commercial advantage as well as to military use.

The discoveries that we shall reap through satellites and manned space vehicles probing the universe are truly impossible to predict. We must not lose our sense of balance. But the impact of space on our daily lives will be staggering as the end of our century approaches. Satellites with radio beacons operating on solar batteries will serve as navigation aids. They will also keep the world's weather under observation and greatly assist in improving world-wide communications. We must be sure they become a boon and not a threat to our security and our survival.

Electronics is another startling field. Consider only the microminiaturization of electronic components and their important ap-

plication in space vehicles and computers. The potential use of computers may involve hundreds of new applications-such as practically automatic control of factory operations, flight calculations, navigation, banking, marketing and the like, Whereas automation promises to replace some of man's muscle; computers promise to replace much of man's mind in the repetitive recording and evaluating skills.

The implications of all these technologysparked advances are staggering beyond imagination, but they give us hope and promise for a dynamic future, if we have

the capacity to use them wisely.

From Dr. Jekyll comes the vista of better health, longer life, increased production, new sources of energy and materials, and the hope of peace and betterment for all mankind. Yet, we must be constantly aware of the dangers inherent in revolutionary technological progress. For, to its twin character as a shadowy, sinister Mr. Hyde, modern tech-nology has unleashed world-wracking evils based upon overconsumption of natural resources, overpopulation, obsolescence, im-balance, and the power of vast destruction and annihilation.

Today, a single, nuclear-tipped missile can equal in destructive power all the devastation created during World War II. This startling development has caused great fear in all parts of the world that this terrible power will, by design or miscalculation, break loose and wreak havoc upon nations

and peoples.

Today, the Soviets seek to disarm and divide the free world—in their efforts to establish decisive superiority in the military and economic fields. Working unceasingly to create superior weapons systems and equipment of all types, the Soviets seek to limit us to a choice between burial and peaceful coexistence with all that it entails. They picture mighty military power, capable of attacking under the shield of an all-out nuclear offensive, and every success they achieve technologically sharpens the edge of the weapons race and enhances the effectiveness of their other related means of conflict-political, sociological, psychological, and economic.

In other areas the vicious Hyde aspect of an exploding technology is apparent.

Through new advances in medicine, sanitation, and food supply, technology has created an explosion in the human population. 'The world's population is now growing at the high rate of 2.5 percent a year. Demographers tell us by the turn of the century there will be some 6 billion people on this earth. Today, there are only about half of that number. The effects of this population growth are comparable to a chain reaction, but like chain letters this reaction is unlikely to expand according to mathematical computation.

The vast multitudes of tomorrow and the day after tomorrow will increasingly require more developed land for living, more food for sustenance, more natural resources for production, and more opportunities for Work-demands that can only be met by still greater technological progress. Incidentally, while Latin America can't supply her own food today, future development of land and water resources alone could feed the entire world's population.

Such problems in supply and demand are challenging and will tax the ingenuity and resources of all nations. These problems must be solved by technological and social progress-by new developments in agricultural processes, exploitation of the oceans, better land utilization and soil conservation-by creation of new industries-and by utilization of new energy sources to replace the prospective depletion of fossil fuels. This burgeoning host will also require ade-Quate water supplies for consumption and ir-

rigation, probably to be secured through desalination of sea water and the settlement of presently unpopulated areas.

As if these problems were not enough, the complex solutions to them will tend to magnify the rivalry between nations; even between allies. This rivalry may be typified by the growing quest for land-both for living space and food and for raw materials to feed an ever-accelerating technology.

We are becoming more aware of the problems of Latin America.

The Hyde aspect also creates truly significant problems in those vital areas of Africa and Asia, now known as the "uncommitted world." These people are all part and parcel of the technological contest between Russia and the free world. They are determined to secure industrial progress and richer lives through technology. Even if communism were a dead issue, the awakened ethnic nationalism in the vast underdeveloped areas of the world would constitute the greatest challenge man has faced in centuries. people-diseased, undernourished, illiterate, impoverished-call for an improved standard of living, which they themselves, are incapa-ble of developing. They look to see which ble of developing. They look to see which existing system—the free world or communism-can best help them secure the economic necessities of life-and which system can do it more rapidly.

As Father McCluskey reported in a recent

issue of America magazine:

"A year ago in October, the people in what was then French Guinea voted to secede from the French Overseas Community and to make their Wyoming-sized country on the west coast of Africa an independent republic. The morning after the French administrators had taken their leave of Conakry, the capital city, the exuberant populace climbed aboard the public buses and became indignant when the usual attempts were made to collect fares. After all, had not Guinea And didn't this now achieved democracy? mean that in a people's democracy all things were controlled by the people.

After a few days trial, a village of natives on the other side of Africa, in the Bukavu region of the Belgian Congo, moved out of their new government-built cottages of cement blocks and corrugated tin roofs and moved in their goats and cattle. They built mud-and-thatch huts alongside for themselves, explaining that they found their own housing cooler by day and warmer by night.

Both incidents tell dramatically of the rudeness of the African soil in which the transplanted shoots of Western-style democracy-and so much else of our Western civili-

zation-are struggling to grow."

In 1945 there were only four independent countries on the African Continent. Now there are 14. With the pressures generated today, this total is likely to rise to 30 in the next decade. If and when this occurs they will be the commanding bloc in a United Nations Assembly of 102 members. Here is really food for thought, gentlemen.

Unfortunately, there are many other aspects of Mr. Hyde.

In industry, today, obsolescence follows closely behind invention. Consider, for example, how rapidly television replaced radio as a near-universal household fixture-almost within the short span of 5 years. The impact of early obsolescence has particular meaning in such sensitive industries as missiles and chemicals. Here, high-cost machines and products must be amortized within 3 or 4 years before the production technique or the product itself is outmoded.

Obsolescence has real meaning to us in the military. While the horse and lance remained a major weapon system for over 2,000 years, military versions of the fixedwing aircraft, first flown by the Army in 1909, will last less than a century as a major military weapon. Supersonic fighters may end

their usefulness in less than my lifespan. They are now about 10 years old. Today, experience is proving that some of our operational weapons are hardly off the production line before they are obsolescent. Significant, too, is the fact that in its Mr. Hyde character, technology obsoletes some weapons in development long before they ever get into production. This has caused more misunderstanding and criticism of the Armed Forces than any other aspect of our peacetime programs. I can assure you that we all try to avoid this seeming waste of time. effort, and money by the closest possible military-industry-science teamwork, but nevertheless some early obsolescence does plague us. I subscribe only to the theory that it is a lot safer and, in the long run, cheaper to build weapons and not use them than it is to need weapons and not have

Mr. Hyde is also thrusting many new and tremendous social problems on us faster than we are able to cope with them. This snowballing effect is changing our family. community, racial, and national concepts and influencing even our biological environment. Consider, for example, the problems we face as powerful new insecticides destroy garden variety pests. We do not know what new terrors will confront us by other insects or rodents no longer controlled by the very pests we ourselves destroy. There is order in the universe-balance among all speciesuntil mankind destroys or upsets it.

In other ways, social progress lags behind technical progress. As the physical sciences outstrip the social, more must be known about why man acts and reacts as he does. How to bring order and reason out of the in-ternational Tower of Babel in which we live is the primary problem today. We are in grave danger from some of our new machines. Like a car speeding along the highway, we will outrun our headlights unless there is better built-in man-machine compatibility.

Modern technology even strikes hard at our family and community relationships. Technology and trade thrive upon dense or easily accessible populations. As they rapidly expand, they create even denser populations of workers. The future portends that millions more will be concentrated in new urban and suburban areas, reflecting greater needs for housing, transportation, communication, health, and welfare facilities unless greater decentralization can be effected.

But more important to me is the evidence that the products of an exploding technology increasingly tend to obscure the importance of the only philosophy which gives real meaning to life itself, the spiritual. "Ill fares the land * * * where wealth accumulates and men decay."

We have been so blessed in this favored segment of the world that material comforts now threaten to become the opiate of our people. Growing up in an educational atmosphere and environment where many of our citizens avoid consideration of or scorn the moral and spiritual values so vital to our children and our civilization, it is no wonder that we seem to be approaching the fatal point where we are unable to differentiate between our standard of living and our way of life.

My friends, the amazing resourcefulness

of Dr. Jekyll can and must win out over Mr. Hyde as modern technology drives forward, outpacing our very imagination. The certainty exists that human life will be more complex in the future and more complex measures will be required to solve mankind's desire for peace and prosperity but unless enlightened trade policies and distribution techniques are developed, our civilization is in dire danger.

Technology must be made the sound and solid key to economic growth, industrial progress, better health, and richer livestruly the yeast that expands all other resources—but the development of a willingness and a system to better distribute the necessities and some of the comforts of life to impoverished peoples and areas is fundamental in this new era of mankind and this will likely entail some sacrifice of the luxuries to which a few favored peoples have become inured.

Technology is also the key to national security. Technology provides the high-quality weapons and equipment we need on a continuing basis to defend our homeland and to protect our national interests around the world. We must not lose sight of the diplomatic advantage which comes from military strength and the impossibility of negotiating successfully from a position of weakness. Diplomatic dealing without powerful cards is always bluff at best and usually gets "called".

I cannot stress too strongly that as our technology continues to accelerate, emphasis must increase on the critical importance of research and development—basic research for new scientific knowledge; applied research and development for new hardware items and research in the humanities and social sciences to better utilize the fruits of man's efforts. Truly, our ability to compete in world markets or on world battlefields in the 1960's and 1970's will be determined, to a great extent, by the R. & D. effort that is underway today and tomorrow.

We must face the question now of whether

We must face the question now of whether the world's trade by the turn of the century is to be conducted on a basis of four rubles to the dollar or four dollars to the ruble if

we hope to solve it favorably.

One of the serious implications of an exploding technology is the ever-increasing dependence on more and more research. A recent issue of IBM's magazine Think depicted this need in these colorful words:

"We are still hatching the golden eggs laid some time ago, without real thought concerning where they came from but with only what grows out of them, which is the present spectacular and ominously shaky technological society—the goose that lays the eggs is gradually becoming starved to death, with no prospect of replacement."

Yet, today our research effort is not advancing as rapidly as it should and in some areas it is at a relative standstill. Consider, for example, the important fields of meteorology. oceanography, and seismology, where research is relatively sterile for lack of better

facilities and adequate funds.

Significant, too, is the need for a balance between basic research on the one hand, and applied research and development, on the other. In the past and even today we may have overemphasized the technological structure—applied research and development—at the expense of its scientific foundation—basic research.

Basic research is the tool of science which looks into the future for a 12- to 20-year period—as an example, toward the markets or the battlefields of 1975. Technology's great reliance upon basic research is most readily illustrated in my mind in the field of military weapons. At the close of World War II, Dr. Vannevar Bush well-described this dependence when he wrote: "We've used up 50 years of basic research in 5 years of war."

Applied research and development depends upon the continual acquisition of new scientific facts and knowledge. In this area, we take a shorter look into the future—say 5 to 8 years—and seek to develop new components—or ways and means to make them cheaper and better—and in the military field, we seek to fashion new weapons systems and equipment of radically new or improved design.

In today's market for capital goods the most dynamic force is applied research and development—or new technology. Consider, for example, that 75 percent of the drugs on sale in our stores today were not even known 10 years ago. And 15 years ago, more than 50 percent of the chemical products we now market were only a gleam in the chemist's

These illustrations show how critical is the dimension of time in the development of new products. We are particularly concerned with this "leadtime" factor because it has a tremendous impact on the development of new military weapons and equipment. In many respects, I can assure you, time here is worth more than wealth. In fact, any stretchout in the time of development costs real money. Furthermore, a review of the history of warfare highlights the enormous advantage accruing to nations which first develop new weapons, accurately appraise their potential, and incorporate them into their military structure and doctrine.

I should like to show you now a short film illustrating a few of the Army's latest developments. This film includes ground and air vehicles and the latest advances in firepower—rockets and guided missiles:

GOER VEHICLE

For movement of large tonnages, a large wheel, positive wagon-steer, all-wheel-drive vehicle, known as a Goer, is in the testing stage. Here is a demonstration showing how this prototype Goer vehicle can maneuver through a mud lane, 30 inches deep. concept, which is a new approach to logistical carriers for use in highly mobile Army forces is an outgrowth of recent developments in heavy earth-moving equipment. The Goer is rugged and reliable and exceeds any other wheeled vehicle I know of in real off-road mobility. In addition, it can carry its own weight and has good amphibious characteristics. The 15-ton Goer in this picture was built by Le Tourneau-Westinghouse, and has the lift capacity of six 2½-ton trucks. [Pause to obstacle course.] Here it is going over large obstacles-a series of sandy hogbacks-which as you can see stop conventional trucks.

DOAK

The Doak test bed is designed to take off and land like a helicopter but operates in the air like a conventional airplane. Doak uses rotatable ducted fans as its source of propulsion. Here you see it taking off with the fans at about a vertical position. Notice now that the propeller ducts are rotated to the full forward position permitting normal flight characteristics of the aircraft. [Pause.] To land, the engines are returned to the vertical.

PIASECKI FLYING PLATFORM

This test bed is commonly called the Piasecki flying jeep. It is one of two models which we have under development. The flying jeep employs ducted fans for its source of propulsion and has conventional-type helicopter controls. The operation at this stage of research is cumbersome, as you can see. Much work remains to be done before stability and control reach the level desired, but the feasibility of this type of air movement has been established.

SURVEILLANCE DRONE

In the surveillance field, here is the SD-2, our newest drone system for gathering information of the enemy in the battle area. It is launched from a standard Army trailer. Jet boosted into flight, the SD-2 is radio controlled to survey enemy positions. Its sensory compartment accommodates phototransmission systems, infrared, radar, or other new electronic devices which transmit or bring back data. Here, it is being recovered by its own parachute. [Pause.] Development is underway on a family of drone systems for employment by the various command echelons of the field Army.

LITTLE JOHN

The first project in the firepower area is the improved or tactical Little John. Notice the battlefield mobility of this weapon now being developed to provide an atomic punch for our Strategic Army Corps. This version of Little John has improved accuracy and will give us a firepower capability to meet our special requirements.

LACROSSE

Now for Lacrosse, another close-support guided missile of extreme accuracy. In this sequence you'll see it fired at a stake several thousand yards away. [Pause.] Notice how it homes on the target. Lacrosse is highly mobile—it can be fired from a launcher mounted on a standard truck, and it can be carried by a helicopter.

SERGEANT

Now let us look at Sergeant. This is the weapon that will supersede Corporal, and like Corporal can carry an atomic warhead to about a 75-mile range. It is smaller, more efficient—a solid propellant rocket. It provides much easier, faster, and simpler handling in the field. This is under advanced testing and should soon go into production. These weapons, as you can envisage, will carry a variety of warheads.

PERSHING

Remember the first Pershing firing in the early part of March. Here is its test in which America's newest ballistic missile completely satisfied all test objectives. The Pershing is a solid propellant replacement for the Redstone which now is operational as a field Army support missile. It is much smaller and lighter than its predecessor, will have considerable greater range than the Redstone, and is designed to be a rugged, reliable, mobile, quick reacting missile system.

There was no hold on the countdown, and this testifies to the good reliability and short reaction time we seek in this weapon. Significant, too, is the fact that this first Pershing was fired from a tactical prototype transporter-erector-launcher which is ground maneuverable by tracked vehicle and air transportable by Army helicopter or Air Force aircraft.

HAWK

Now look at this air-defense weapon—"the bullet with the brain." It is called "Hawk." It provides a low-level air-defense capability. It is the counterpart of the Nike-Hercules. Here you'll see it reach and destroy an F-80 drone at a low altitude. This missile carried a high-explosive warhead. You will see how accurate it is when the missile comes up and destroys the drone that is just entering the screen. Hawk has intercepted targets below 100 feet and up to 50,000 feet in altitude. Hawk battalions now in training are expected to be operational within months.

[Film off.]
This new equipment is evidence of the technological progress which we as a nation must continue to enjoy on a broad basis if we are to meet and beat the Communist challenge. It is a product of money, materials and facilities, combined with the dedication and accomplishments of intelligent, ingenious and highly educated men. The key to our continued technological growth is research progress.

Certainly we must take steps to encourage more of our students to enter the scientific and engineering fields. We should also take steps to insure that the nontechnical professions know more about science and technology. To my mind, there is as much reason for knowledgeable people in the humanities knowing more about science and technology as there is for knowledgeable people in the technical fields knowing more about the humanities. In all fields, we need to develop the talent and genius native in our people to their maximum potential.

Here, we cannot overlook the real challenge of Soviet education. The Soviets are graduating today 2½ times as many engineers and scientists as we are producing in

American universities. The implications, here, are awesome. If the Soviets could break through the thought barriers of science and technology ahead of us regularly, our position would be precarious at best.

Consider, for example, the advantages which would accrue to the nation that first perfects a defense against the ICBM or possible threats from satellites. That nation would have enormous advantages in defense and security unknown to the rest of the world. Any enemy superiority in offensive weapons would be negated.

What then is needed is a plan of action to insure a dynamic future—to continue our growth and prosperity-to keep our lead in the technological race with the Communists-to advance our civilization in the interests of the peoples of the world as well as

Ourselves.

To do this, I believe that we must arouse our people from their complacency and we, as a Nation, must awaken more fully to the dangers confronting us. We must take positive steps to crystallize a counterstrategy against Communist plans for domination of this earth. Here, it is important that we resurrect the spirit and determination of our forefathers.

On the international scene, our leaders must seize, retain, and exploit the initiative in all fields of human endeavor. We must unmask the false image communism is projecting to the world—the image of a winning movement-inevitably riding the rising wave of history. We must use the fruits of our free enterprise technology to counter

and disprove this Soviet claim.

An obvious example of this initiative is the need for greater concentration of technological effort in Asia and Africa in order to bolster fledgling and underdeveloped countries now reaching out from centuries of backwardness toward the promise of political liberty, economic freedom, and material improvement. In this uncommitted part of the world, we have some influence, and we should have; but we should not confuse our affluence at home with our influence abroad. To have luxuries is one thing; to have comforts is another; and to have the necessities of life is a third. What are luxuries to others are considered necessities by us. It is high time now for Americans to differentiate between these separate and profoundly different human requirements and possessions and reassess our values from a mature and modern viewpoint.

The populations of the Middle East and Latin America share a common awareness of the problems in Asia and Africa and a passionate conviction that they can offset the great divergence between their living standards and those of the West. If peace and stability are to be maintained in this shrinking world of ours, their aspirations must be recognized and their needs met to a greater de-To the extent we can assist, we should, in the interest of both humanity and of international peace. As I said, if the threat of world communism were removed tomorrow, the problems caused by ethnic nationalism so rampant in all the underdeveloped areas of the world would still challenge our best

efforts for the next century.

Next, there are some economic actions we can with great profit throw into a powerful offensive punch against our opponent. We must increase the overall U.S. industrial growth rate to 5 percent and better; spend Whatever is clearly necessary for vital national programs, domestic and foreign; promote all facets of our vital, productive free-enterprise system; place foreign trade, credit and aid policies on a sensible competitive and long-term basis; and maintain a monetary structure strong at home and sound abroad.

Pinally, plan in coordination with our sister nations of the free world for the establishment of international policies to solidify the peoples of the free world and repulse the advance of communism. Success in this field will test the human virtues of sacrifice and selflessness to a degree never before equalled.

Lastly, but most important, we must redouble our efforts to guard and advance our American way of life—a life based on a belief in the dignity of man, faith in God, and freedom and justice for all. Our standard of living, enhanced by an exploding tech-nology, is something else altogether. It is contributory to this goal but must not be controlling.

Today, I have given you some of my thoughts on the implications of an exploding technology and on a forward strategy to marshal the potential of America to cope with this challenge.

Do we have the national courage and anpreciation of our objectives to meet the critical challenge before us? This is a fundamental question which probes the very soul and policies of our Nation.

Listen to the inspiring words of Theodore Roosevelt, who was a soldier and a man of strong convictions, high character and endowed with outstanding qualities of dynamic

leadership:

We know there are dangers ahead, as we know there are evils to fight and overcome, but, stout of heart, we see, across the dangers. the great future that lies beyond, and we rejoice, as a giant refreshed, as a strong man girt for the race. The greatest victories are yet to be won, the greatest deeds yet to be done. There are in store for our people and for the causes we uphold grander triumphs than have ever yet been recorded." Strong words from a strong man and how they make us think.

We must realize in this age of great change that time is of the essence and that faith. not fear and courage, not complacency, will

be the keys to our survival.

Our readiness to meet the technological as well as the political, economic, social, and military challenges of communism in our time must be of the highest order. This means a nationwide effort to reevaluate the Communist multiple threat against us and the development of a dynamic, comprehensive and vigorous counterstrategy to defeat

I can think of no better way to assert what I believe our national spirit should be today, than to echo the challenging words of Daniel Webster-inspiring words which are in-scribed on the wall above the Speaker's chair in our House of Representatives in Washington:

"Let us develop the resources of our land. call forth its power; build its institutions, promote all its great interests and see whether we also in our day and generation may not perform something worthy to be remembered."

Thus, the heavy mantle of free world leadership, now resting precariously on our shoulders, will drape itself more securely and more gracefully about us if we not only guard it against the ominous pressures of today but guide the way of mankind to an enlightened and happier tomorrow.

I thank you very much.

Lung Cancer in Birmingham

EXTENSION OF REMARKS OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 31, 1960

Mr. ROBERTS. Mr. Speaker, as chairman of the Subcommittee on

Health and Safety, I have had it demonstrated to me over and over again that air pollution is a national health problem. It is not confined to the generally thought of smog areas such as in California. It concerns us every one.

During the Air Pollution Control Association Conference in Cincinnati, it was pointed out that new evidence shows air pollution to be a prime cause of lung cancer. One of the cities cited is in my own State, in Birmingham.

The complete story appeared in the Washington Post of May 26, 1960, and I wish to insert it at this point in the

RECORD:

CANCER LAID TO AIR POLLUTION (By Morton Mintz)

CINCINNATI, May 25 .- New evidence pointing to air pollution as a prime cause of lung cancer-and deemphasizing the role of cigarette smoking-was reported today by Dr. W. C. Hueper of the National Cancer Institute.

His research was hailed as a landmark by Dr. Richard A. Prindle, medical air pollution chief of the Public Health Service,

Dr. Hueper said his study shows the rate of lung cancer in Birmingham, Ala., triple the national average, corresponds closely with the level of benzpyrene in its air.

Birmingham is thus indicated to be like the British industrial cities that have a similar correlation and also burn coal in large quantities.

BENZPYRENE IN AIR

Last month PHS said benzpyrene was in all the air samples it collected in 103 cities. The concentrations were puzzling—Washington's, for example, was higher than industrial Pitts-

Dr. Hueper told the Air Pollution Control Association today that benzpyrene was found to be a reliable index to the cancer danger in the air only in Birmingham.

It was found in lesser amounts in the other cities studied-Atlanta, Cincinnati, Detroit, Los Angeles, New Orleans, Philadelphia, and San Francisco. But it had no correlation with the potency of other cancer-producers in their air or with their lung-cancer rates.

Benzpyrene, also found in cigarette smoke. is only one of many airborne pollutants that cause cancer in laboratory animals and are suspected to cause it in man.

VARIATIONS IN CITIES

Dr. Hueper concluded that the "atmospheric carcinogenic spectrum" in American cities is of almost incredible individuality, varying with local conditions and not susceptible to any uniform analysis. Only a massive assault can pinpoint the air's cancer potential, he said.

Air samples were collected in the eight cities, which have different types and causes of air pollution, and separated into extracts by E. C. Tabor and Eugene Sawicki of the PHS Robert A. Taft Sanitary Engineering

Center here.

The extracts were "roughly representative" of the air during the month-long sampling period. All can be created when any fuel is burned or distilled in many industrial processes. They were injected under the neck skin of thousands of mice at the Cancer Institute in Bethesda and at the University of Southern California.

The Birmingham extracts, Dr. Hueper said caused an incidence of tumors related to the rate of human lung cancer there.

He said the pollutants other than benzpyrene in the extracts from all eight cities produced tumors in the mice.

And, he said, the evidence "makes it likethat pollutants of these types "have played an important role in the progressive increase of the frequency of lung cancers during recent decades."

As to cigarette smoking, Dr. Hueper ridiculed claims that it causes between 60 and 96 percent of all lung cancers in males.

He conceded that quite likely it plays both a direct and indirect role. But, he said it cannot have overwhelming importance in the face of such factors as:

A lung cancer rate much higher among urban than rural smokers.

An upswing in European lung cancers be-

fore cigarette smoking was common.

A much greater rate of lung cancer among Britons who emigrated to New Zealand and South Africa than among the nativeborn who smoke as much.

Aid: Appropriation Still Needed

EXTENSION OF REMARKS OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another excellent article by one of America's most reputable and respected newspapers which points clearly to the fact that our mutual security program is of most vital concern:

[From the Christian Science Monitor, May 23, 1960]

AID: APPROPRIATION STILL NEEDED

Year after year attention has to be called to the difference between "authorization" and "appropriation" in connection with providing funds for the U.S. mutual security program.

Congress on May 12 completed passage of the Mutual Security Act of 1960 authorizing appropriation of \$1,366 million for defense support, technical cooperation, special assistance, and other programs in addition to \$2,720 million of authorizations for military assistance and the Development Loan Fund carried over from previous years.

The uninitiated might assume that this made the money available. But not so. Actually not one cent of this money can be spent until it is included also in an ap-propriation duly passed by both Houses of Congress, after consideration by their committees, and signed by the President.

When President Eisenhower signed the authorization bill he expressed a hope that Congress would show the same high degree of responsibility in voting the appropriations for which it had paved the way.

Two weeks earlier he told a dinner gathering in Washington that trends were developing in this connection which were profoundly disturbing. He referred to groups strategically situated in Congress, notably in the Appropriations Committee of the House of Representatives, which have proclaimed it as their purpose to slash these foreign aid appropriations by more than a billion dollars.

This would mean a 25-percent cut in a program that corresponds to approximately one-tenth of the national defense budget or one-twentleth of the total Federal budget. Even much lesser cuts, the President implied, would raise grave problems.

Today it is being reported that sentiment in Congress since the breakdown of the intended summit conference at Paris inclines toward a strengthening of American de-fenses. This could easily become a mistake if it took forms which conveyed an impres-sion that the United States was becoming more warlike or aggressive.

It could also become extravagantly expensive if it concentrated on armaments to be built and operated by the United States alone. But the mutual security authorizations include \$2 billion of carryover for military assistance to countries allied with the United States. This money, often multiplied many times over by the contributions of those countries to their own defense, assists them in keeping their military establishments up to date.

In addition, there is defense support for exposed nations carrying a heavier defense load than their resources will sustain. And technical assistance which expresses America's friendship even to nonallied countries whose understanding means much in the free world's contest with communism.

Altogether, it would be difficult to see where America, through Congress, can make a better investment in security and good will than by making full appropriations for the aid program that Congress has authorized.

Resolutions Adopted by the Congregational Christian Conference at Fort Dodge, May 3, 4, 5, 1980

> EXTENSION OF REMARKS OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. WOLF. Mr. Speaker, I wish to congratulate the Congregational Christian Conference of Iowa on its forthright resolutions adopted during its conference at Fort Dodge, May 3, 4, and 5.

The text of the resolutions follow:

CONGREGATIONAL CHRISTIAN CONFERENCE OF TOWA, Grinnell, Iowa, May 25, 1960.

The Honorable LEONARD G. WOLF, House of Representatives,

Washington, D.C.
DEAR MR. WOLF: The following resolutions adopted at the 121st annual meeting of the Congregational Christian Conference of Iowa held at Fort Dodge, Iowa, on May 3, 4, and 5, are self-explanatory and I have been authorized to submit them to you:

"RESOLUTION 1

"Whereas mankind has devised nuclear weapons capable of human annihilation; and

"Whereas the future of civilization as we know it is dependent upon persistent and continued exploration of means for resolving the tensions existing between nations:

"Resolved, That our conference go on record as urging the United States to persist in the effort to reach multilateral agreement on cessation of all kinds of nuclear weapons testing and continue negotiations in good faith for general reduction and control of armaments.'

"RESOLUTION 2

"Whereas a global community necessitates the strengthening of international institutions to deal effectively with problems arising between constituent nations; and

"Whereas the World Court has been weakened by the limitation placed upon its jurisdiction by the Connally amendment;

"Whereas our President has advocated its repeal: Be it

"Resolved, That the State conference go on record as favoring the repeal of the Connally amendment to the U.S. treaty adherence to the World Court."

I trust that you will give these resolutions your consideration and support.

Sincerely,

JUDSON E. FIERIGER. Superintendent.

Graduates of 1960 and Job Outlook

EXTENSION OF REMARKS

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. ROBERTS. Mr. Speaker, what do today's seniors face? Two outstanding editorials in Fourth Alabama District newspapers recently offered some answers to this question.

One of these, from the Talladega Daily Home, is entitled "The Graduates of 1960," the other comes from the Anniston Star, and is entitled "Job Outlook Cheering."

Under unanimous consent, I include both these articles in the RECORD:

[From the Talladega Daily Home] THE GRADUATES OF 1960

This week belongs to the graduates-this week and a world that is neither as bold nor

as new as it used to be. Graduation time is, and should be, bright

with happiness for those who graduate and for the members of their families who have given unstintingly that they might arrive at the magic moment.

But foolish indeed would be any attempt

to gloss over the grim darkness of the world into which these young people are about to venture.

If there were not wars and rumors of wars. this would be the best time in all history to be young and beginning the great ad-

Technological advances have brought man into an era when living should be at its best-when the wonders of science are compounded in gifts to smooth our way.

But, tragically, those same wonders have combined to shadow all humanity with the menace of the nuclear weapon.

Today's seniors must face that fact, but within them is the strength of youth and it will not unduly weigh them down.

The greatness of the challenge but builds the greatness of the opportunity ahead of them. May they see and understand and thus avoid the mistakes of their elders. May the guidance of providence lead them to give to their own poeterity a world bright with all of the good of modern civilization and unclouded by its fears.

[From the Anniston (Ala.) Star, May 24.

JOB OUTLOOK CHEERING

With the arrival of another commencement season, it is being proved anew that the young person with a trained mind enjoys a big advantage in the job market.

Competent observers are predicting that virtually every 1960 college graduate who wants to work will find a job, and that the pay is likely to be at an alltime high for a beginner.

Estimates on salaries run from 2 to 3 percent higher than last year at Columbia University to 3 to 5 percent, as suggested by a Business Week survey.

Again the search is particularly for job candidates with scientific training, prefer-

ably at the graduate level.

The Georgia Institute of Technology, replying to this year's annual questionnaire from a leading life insurance company, said: "Calls for Ph. D.'s are so numerous as to be unrealistic-far more than the available supply are wanted at \$850 to \$1,000 a month."

Columbia reported a while back that representatives of 200 companies were seeking mechanical and electrical engineers from s total possible supply on the campus of 20 mechanical and 40 electrical engineering graduates

The University of Minnesota emphasizes a familiar note when it cites a literal short-age of accountants, with firms coming back to the campus a second time seeking more

fiscal apprentices.

Other surveys almost uniformly show a demand for more liberal arts graduates than in previous years, though Business Week calls 1960 openings for other than technical students "adequate but unspectacular during a normal good year."

Recruiters have yet to return to "stock-Piling" college talent for future training, as was true in the midfifties. But competition is keen, especially among representatives of aircraft and missiles manufacturers.

General Electric sought 25 percent more technical recruits than last year, and Du Pont, which last year hired 300 college graduates, was in the market for 1,000.

The automobile industry is said to be back hunting for men in a big way, and steel and other metalworking industries are extremely active. Retail chains are hiring liberal arts graduates for on-the-job training leading to executive positions.

Even so, two surveys by the American Management Association, reported in February, showed disappointment among both employers and college placement officials With recruiters who put too little emphasis on general education and who are afraid of students who may appear too "different."

Liberal arts and business graduates can expect salaries in the range of \$425 to \$450 a month, though the scale will extend as low as \$300 for graduates with poor academic records. A B.S. is worth an additional \$100 or so a month.

As for the distaff side, any young woman who wants to take a job-and a great many of them don't-can be pretty sure of making it this year. Marriage is, of course, an alternative with a great deal of appeal.

Scalping Still Goes in Railroad World

EXTENSION OF REMARKS OF

HON. ROBERT W. LEVERING

IN THE HOUSE OF REPRESENTATIVES Thursday, May 26, 1960

Mr. LEVERING. Mr. Speaker, under leave to extend my remarks, I include, for the consideration of our colleagues concerned with th plight of our railroads, an article which appeared in the May 26 edition of the Wooster Daily Record, by my friend and constituent Doyle Ditmars, entitled "Scalping Still Goes in Railroad World."

The article follows:

INDIAN ATTACK: SCALPING STILL GOES IN RAILROAD WORLD

(By Doyle Ditmars)

Mitchell, the modern "Indians" attacking

the railroads and news of the return of the circus train are used in this article through the courtesy of the Louisville and Nashville Railroad of which the author is a great admirer and satisfied customer.)

On May 10, 1869, the first transcontinental railroad was completed at the ceremony of driving of the golden spike at Promentory Point in Utah. On that date, bands of steel joined the East and the West and rail transportation was begun from the Atlantic to the Pacific.

In those early days and for some years afterwards, hostile Indians attacked builders of this great railroad and others which followed. The crews laid steel with one hand and threw hot lead with the other at the savages who impeded civilization and tried to drive the railroads out of business before they began.

That was 90 years ago. Strange, to say, today, even with all our great progress, "hostile Indians" still snipe at the heels of modern railroad progress and try to drive the most efficient form of transportation out of the hills of business enterprises and off the plains and prairies of agricultural pursuits.

A "friendly Indian" recently pointed out

to an observer as the two stood upon "Observation Rock," that hostile tribes yet on the warpath are these: "The Bureaupatros, who are armed with tons of obsolete regulations and miles of redtape; (needless to say, these Indians pitch their tepees down on Capitol Hill.) The Assessioux, who constantly swarm over railroad installations, seeking to lift scalps off all taxable assets at double the value of other private property; (we believe this tribe also camps somewhere down along the Potomac); and the Spendakotas, who shovel out tax money so collected to subsidize competing motor carriers, waterways and airlines."

Some of this tribe of "Indians" live among Every 2 years we elect a few of their number to the Halls of Congress. But they seem to forget (when they go to Washington) that their constituents send them there to represent the entire country and the interests of its people not a select few business concerns to which they see fit to give handouts at the expense of an older form of transportation which, collectively, is the backbone of national defense.

The old saying: "The only good Indian is a dead Indian," is not true. But to be a good Indian, one must first be a good American. This "friendly Indian" knows his wampum, what it means and how it can work to the advantage of some and to the disadvantage of others.

Secretary of Labor James P. Mitchell re-cently remarked: "Rail unions and management must realize that the field has widened; that the railroad industry finds itself one part of a competitive transportation system." He called for an overhauling of the ICC so that "Federal regulation produces equality of competition and not an index to the competition of yesterday."

Secretary Mitchell pointed out further as to how the Government actually impedes railroad progress and development. He

"The Government subsidizes building of ships and losses of American flag lines. It deepens and develops inland waterways. subsidizes airlines through construction of terminals and carrying mail. It has subsidized truckers through building of public

"The railroads remain the great unsubsidized portion of America's transportation system. I suggest that we seek gradual elimination of all Government subsidies in transportation and consider introduction of user charges so that each mode of transportation carries its fair share of burden of public expenditures from which they now profit unequally."

The Secretary is the kind of "friendly Indian" which this county needs tribes of, instead of just a chief. The "Bureaupahos," the "Assessioux," and the "Spendakotas" are all in alliance—knowingly or unknowinglyworking at the elimination of the American railroads for the sake of progress and convenience. We the people sit by or comfortably ride our Fords, Plymouths, Chevies, Chryslers—and can't af-Fords—across the country, little caring what happens to the iron horse, who feeds it or just how it gets its

Seems that we rightfully belong in the tribe of the Don't carachees, continually traversing our own Maumee Trails while applying the tomahawk, Modoc fashion, to the form of transportation which actually built form of transportation which actually built the country. Sitting Bull in his day was a piker, by comparison, to modern Americans for attacking and trying to wreck our railroads.

However, in the face of all these discouraging activities of both individuals and the Government which we support, there is a happy note of good news for youngsters—ages 1 to 100—coming down over the rails.

Quoting from the L. & N. magazine, May issue, "The Circus Train Is Coming Back."

"Conspicuous by its absence for several years, the circus train will again this year be a familiar sight to many American towns and cities. Ringling Brothers and Barnum & Bailey—the last big circus to motorize—after 3 years of battling flat tires, traffic jams and red lights, gave up its trucks and went back to the railroads. Its long-familiar cars have been overhauled and repainted and are now once again a welcome part of the American scene."

Perhaps the youngsters-and oldsters Wooster and vicinity will again be thrilled and entertained watching this great circus unload on the familiar Pennsylvania sidings down by the depot. Happy days are here

Real Aid for Distressed Areas

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD. I include an editorial on a very timely issue, which appeared in the Christian Science Monitor for May 26, 1960:

REAL AID FOR DISTRESSED AREAS

Without a test in the House of Representatives, the effort to override President Eisenhower's veto of the \$251 million bill to aid distressed areas has failed in the Senate. Though falling well short of the required two-thirds, the vote showed that a majority in the Senate favor more liberal aid of this sort than the administration's original \$53 million proposal.

Indeed, Republican Senators since the veto have introduced a measure carrying authorization for a \$180 million program, and this might well become the basis of a reasonable

compromise.

The important points to be reconciled. however, are not merely a difference in figures after the dollar sign but also and especially the formula by which a depressed industrial area would be identified for assistance.

The vetoed bill would have permitted use of revolving loan funds to stimulate new industry in any regions where current unemployment was 6 percent or more of the labor force and where 12 percent had been idle during the preceding 12 months, or 9 percent during 15 of the last 18 months, or 6 percent during 18 of the last 24 months.

By this standard 40 major areas and 103 smaller areas of the United States, including Detroit, Philadelphia, Pittsburgh, Buffalo, and Louisville, would have qualified for aid. This is approximately twice the area the Senate a year ago proposed to cover with \$390 million. The \$53-million administra-tion proposal would have concentrated on the 16 major areas and 48 smaller ones hardest hit by persistent joblessness.

There is a great deal to be said for the contention of such sponsors as Senator Paul H. Douglas, of Illinois, that investment in rehabilitation and retraining programs for depressed areas is one of the best ways of supporting national economic growth. One may sympathize also with the argument of another Democrat that the bill is "an effort to help our own people in a way that other countries are getting help now from our

agencies."

Yet probably the most effective parts of such a program are the least expensiveauthorizations of \$6 million for vocational training and technical assistance. most controversial, perhaps, is an authorization of \$35 million in grants for public facilitles in depressed areas. And the most questionable probably is an extension of the 1949 Housing Act to make an undetermined amount of urban renewal funds available for

commercial or industrial redevelopment.

The shotgun approach of blanketing in the greatest number of potential beneficiary areas would enable more congressional candidates this fall to say from the campaign platform, "Look, I got something for you." But there is great validity in the President's criticism that the measure passed "would make eligible for Federal assistance areas that don't need it."

Division on the bill has not been wholly along party lines. Yet the principal hazards to some effective action seems to be political. If opposition leaders in Congress are genuinely interested in helping the depressed areas—and not merely needy candidates for office—they will get behind a compromise measure that can gain White House approval and that will tackle the problem where it is most severe.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the CONGRES-SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS.-No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is

respectfully invited:

1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These reunusual indentions be permitted. These re-strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter .- The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following

morning.

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.-If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days. unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record.-When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.-The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
